Subj: CTN2 DANIEL ANDERSON'S REQUEST FOR RECONSIDERATION OF THE
PHYSICAL EVALUATION BOARD'S DENIAL OF A FORMAL PEB HEARING

Ref: (a) Your memo dtd 2 Apr 18
(b) SECNAVINST 1850.4E

Encl: (1) DIRCORB memo dtd 5 Mar 18
(2) DD Form 149

1. Your request on behalf of CTN2 Anderson, as set forth in reference (a), is denied.
2. On 17 January 2017, CTN2 Anderson was found "Fit to Continue on Active Duty." In his Election of Options dated 24 January 2018, he requested a FORMAL PEB hearing to contest his fitness determination. Following re-review of CTN2 Anderson's case by the PEB, and based on the recommendation of the President, PEB, I denied CTN2 Anderson's request for a Formal PEB on 5 March 2018. A copy of my denial letter is provided as enclosure (1).
3. After review of reference (a), CTN2 Anderson's request for a Formal PEB is again denied. His case was processed in accordance with reference (b), which does not provide appeal of the decision to deny a Formal PEB to a service member found fit. I reviewed reference (a), but found the arguments presented and the new information and medical evidence insufficient basis upon which to deviate from regulation by granting further review.
4. Despite my decision, CTN2 Anderson's case may be re-referred to the PEB by appropriate Medical Treatment Facility authorities should they, again, determine his conditions preclude the performance of his duties.
5. CTN2 Anderson's attention is invited to the fact he has the right to petition the Board for Correction of Naval Records (BCNR) if he believes either an error or injustice was committed in his case. Enclosure (2) is provided for your use should you subsequently desire to petition BCNR.

Dear Mr. Riehl,

My name is Tamara Kim, and I am an attorney at Latham & Watkins. The National Veterans Legal Services Program has referred CTN2 Daniel Anderson's case to me and Gene Elrod, copied here.

Gene and I are writing to file the attached Memorandum and relevant Exhibits A-N, with the following purposes:

1. To appeal the Physical Evaluation Board's February 22, 2018 denial of CTN2 Anderson's FPEB request for a formal hearing without approval from the Secretary of the Navy Council of Review Boards; and
2. To request that the CORB grant Anderson's request for an FPEB, or directly find Anderson's Generalized Anxiety Disorder and Major Depressive Disorder to be unfitting conditions.

Please let us know if you have any questions.

Warm regards,

Tae Hee (Tamara) Kim

To: Jeffrey Riehl, CORB

Dear Mr. Riehl,

We are writing to you in our capacity as legal counsel representing CTN2 Daniel Anderson in his appeal of the Physical Evaluation Board's denial of a formal hearing regarding his fitness for duty. On April 2, 2018, on behalf of Mr. Anderson, we filed an appeal of that denial. Please advise us of the status of the appeal. In addition, please copy us on all future communications with Mr. Anderson regarding the appeal.

Thank you.

Respectfully,

Tamara Kim and Gene Elrod
Counsel for Daniel Anderson

LATHAM & WATKINS LLP

1. The purposes of this memorandum are:

- to appeal the Physical Evaluation Board's (PEB) February 22, 2018 denial of CTN2 Daniel Anderson's (hereafter "Anderson") Formal PEB (FPEB) request for a formal hearing without approval from the Secretary of the Navy Council of Review Boards (CORB); and
- to request that the CORB grant Anderson's request for an FPEB, or directly find Anderson's Generalized Anxiety Disorder (GAD) and Major Depressive Disorder (MDD) to be unfitting conditions.

2. SECNAVIST 1850.4e, Enclosure 4, para 4109, clearly states that the PEB president can grant a request to the FPEB, but only the CORB (upon recommendation of the PEB president) may deny such a request.¹ This denial power cannot be delegated, as SECNAVCORBINST 5216.1G attempted, because the Secretary of the Navy, the CORB's superior Secretary, explicitly withheld such power from the PEB president by specifying in SECNAVIST 1850.4e, Enclosure 4, para 4109 that the PEB President may only "recommend" a denial. This bifurcated appeal process ensures that all sailors will receive due process in that their appeals will not be decided by the same entity that ruled against them initially. Despite this regulation and the safeguards it provides, Anderson's FPEB request was directly denied by the PEB President, Mr. John Reeser, on February 22, 2018, apparently without approval from the CORB. *Exhibit K*. For further analysis of the authority to deny a formal hearing, please see *Exhibit N*.

3. Furthermore, the Navy policy notes that a right to a PEB hearing does not exist when a sailor is found "fit" for duty because the DoDI and SECNAVINST indicate that a "fit" finding is a positive outcome. Every Non-Medical Assessment, including Anderson's, indicates the Service member's actual desired outcome. In this case, Anderson indicated he wanted to found "unfit" for duty. Thus, the PEB is aware that Mr. Anderson desired to be found "unfit" due to the severity of his medical conditions, and that any decision of fitness in his case is a *negative* outcome, not a positive one. Therefore, the rationale that being found "fit" is a positive outcome cannot provide a reasoned basis, *in this case*, for denying Mr. Anderson's formal board hearing.

4. The PEB's denial of Anderson's hearing request not only violated SECNAVIST 1850.4e, Enclosure 4, para 4109, but also ran afoul of the CORB's responsibility pursuant SECNAVIST 1850.4e, Enclosure 1, para 1004c(2) to grant a FPEB hearing in the case of a member found FIT for continued naval service, where necessary to "preclude error or injustice."

5. In Anderson's case, had the proper procedural steps been followed, the CORB would have been permitted to review Anderson's IPEB appeal, *Exhibit J*, prior to the denial of his FPEB hearing request. In that event, we respectfully submit that the CORB would have recognized

¹ According to SECNAVIST 1850.4e, Enclosure 4, para 4109b, the PEB President "may grant a request for a hearing before a Formal PEB or recommend to the DIRNCPB, that the request be denied. The DIRNCPB, upon review of the case may grant the request for a hearing or deny it."

April 2, 2018
Page 3

LATHAM & WATKINS LLP

both the procedural error and the injustice to CTN2 Anderson to find him “fit” for duty without a FPEB hearing.

6. The evidence presented in Anderson’s IPEB appeal makes clear that, pursuant to Appendix 2 of DoDI 1332.18, Anderson’s GAD and MDD make him unfit for duty. Those medical conditions make him “unable reasonably to perform duties of his or her office, grade, rank, or rating . . . ,” represent “a decided medical risk to the health of the member or to the welfare or safety of other members,” and impose “unreasonable requirements on the military to maintain or protect the Service member.”

7. In his IPEB appeal, Anderson demonstrated that, as required by SECNAVINST 1850.4E §3306, the preponderance of the evidence, both medical and non-medical, proves his GAD and MDD are unfitting conditions:

A. Anderson has been in mental health treatment regularly, with weekly visits to his psychiatrist since August of 2012. *Exhibit D, at 5; Exhibit I.* Anderson was hospitalized in 2015 for 30 days at Fort Belvoir for inpatient treatment, and additional inpatient treatment was recently recommended. *Id.*

B. Despite being in treatment for several years and on Limited Duty for over 6 months, Anderson’s MDD and GAD continue to cause significant symptoms and limitations as illustrated by his NARSUM and VA DBQ PSYCH Mental disorders Exam (Psych DBQ) dated September 25, 2017. *Exhibit D.* Specifically, Anderson’s NARSUM dated November 6, 2017 notes that his MDD and GAD, among other diagnoses, fail the medical retention standards of the Navy. Specifically, Anderson’s NARSUM finds his MDD to be duty-limiting because it results in sad mood, feelings of helplessness, feelings of hopelessness, low energy, anhedonia, and chronic suicidal ideation, and that his GAD manifests in worry thoughts, rumination, restlessness, sleep disturbance, and panic attacks. *Exhibit C.*

C. Anderson’s GAD and MDD create numerous symptoms that directly limit his ability to serve in the military and to function in the larger world. For example, Anderson’s Psych DBQ states that he has “near-continuous panic or depression affecting the ability to function independently, appropriately and effectively,” “difficulty in adapting to stressful circumstances, including work or a worklike setting,” and “obsessional rituals which interfere with routine activities.” *Exhibit D.*

D. On October 27, 2017, the Commanding Officer of the Cyber Strike Activity Sixty Three completed a Non-Medical Assessment (NMA) in Anderson’s case, confirming the following facts: 1) considering Anderson’s current physical condition, he is not worldwide assignable; and 2) he does not have good potential for continued service in his present physical and mental condition. *Exhibit E, at 2-3.* Anderson’s commander further affirmed her belief that Anderson’s medical conditions render him unfit for military service by personally endorsing the suspension of Anderson’s access to TTS/SCI materials and facilities, stating that his mental health condition “has prompted a review by Department of the Navy Central Adjudication Facility to see if the member can retain

April 2, 2018
Page 4

LATHAM & WATKINS LLP

his current level of security clearance.” This circumstance prevents him from completing regular Cryptologic Networking Technician (CTN2) duties. *Id.* at 3-4.

E. As of March 26, 2018, Anderson’s security clearance remains suspended due to his mental health condition, and there is no indication that it will be reinstated. Because Anderson’s condition, according to his NARSUM, is not likely to improve in the next 12 to 36 months, it appears that he will be disqualified from obtaining the security clearance required to do his job for an indefinite period. *Exhibit C.*

F. Highlighting the errors in the IPEB’s fit-for-duty finding and the PEB’s denial of Anderson’s FPEB request is an Abbreviated Medical Evaluation Board Report, dated December 6, 2017, placing Anderson on a second period of limited duty for his GAD and MDD. Anderson’s second period of limited duty is even more restrictive than his first. *Exhibit B.* The second period of limited duty 1) requires Anderson to remain at Walter Reed for “extensive medical care,” removing him indefinitely from his work as a CTN2; 2) precludes his participation in “late night or overnight duty,” thereby excluding him from shift work that is common for a sailor serving as a CTN2; and 3) prevents him from living on a boat, deploying, and from firing and carrying a weapon. *Id.* Due to these limitations, medical officers concluded that Anderson’s anxiety, depression, and co-morbid medical condition have significantly negatively impacted his ability to function at home and in his social environment. *Id.*

G. On March 16, 2018, and notwithstanding the IPEB’s earlier finding that Anderson is fit for duty, Anderson’s command signed a performance evaluation that concludes that he is “not recommended for retention or advancement.” This recommendation is based largely on the fact that Anderson is in a limited-duty status due to required medical treatment approximately 3-4 days a week. *Exhibit M at 2.*

H. Perhaps most importantly, since the filing of our last memorandum there is new medical evidence that supports a finding that Anderson’s medical conditions render him unfit for duty. Dr. Sherin Paul, Clinical Psychologist at WRNMMC and Anderson’s primary mental health provider, has written a letter to the PEB with information concerning Anderson’s fitness, from a behavioral health perspective, to continue to serve as a CTN2. *Exhibit I.* In Dr. Paul’s professional opinion, Anderson’s GAD and MDD diagnoses, individually and when taken together, leave him unable to perform, safely and reliably, the duties required of a CTN2. *Id.* Moreover, Anderson’s limitations also place at risk secure, classified information and sensitive work product that belong to the Navy. *Id.*

I. Indeed, Dr. Paul’s letter states that, despite his long-term compliance with treatment recommendations, Anderson’s GAD and MOD diagnoses cause him various symptoms that limit his ability to serve in the military, including but not limited to the following: 1) consistent anxiety or depression affecting the ability to function independently, appropriately and effectively; 2) difficulty in adapting to stressful circumstances,

April 2, 2018
Page 5

LATHAM & WATKINS LLP

including work or a work-like setting; and 3) difficulty developing healthy coping skills to manage life stressors. *Exhibit I.*

J. According to Dr. Paul, the above limitations prevent Anderson from performing either his basic military duties or the duties of his rating. *Id.* As a CTN, Anderson works daily in a stressful position that requires him to produce national intelligence products using complex Information Technology (IT) networks containing secure, classified information. *Id.* Anderson's continued service would place at risk not only his mental health, but also his sensitive work product, as his symptoms will likely continue to interfere negatively with his ability to perform his duties efficiently, effectively, and accurately. *Id.* Therefore, if the PEB were to find Anderson fit for duty and Anderson were to continue service, the Navy would be placing at risk its own secure documentation and information systems. Anderson's psychological conditions are highly likely to result in mistakes, poor judgment, and limited professional and mental functioning at any given time.

K. Contrary to what the PEB claimed in its IPEB response, Anderson's medical records illustrate that his GAD and MDD limit his continued military service. There is no indication that Anderson is limited in his duties because his command does not trust him. In fact, as illustrated by his commander's NMA and Anderson's recent evaluation report, his command documents that his medical conditions cause him to miss 30 hours of work per week, and resulted in his loss of the clearance required to do his job as a CTN. *Exhibit E.*

8. In light of these facts, Anderson respectfully requests that the CORB grant him a formal hearing. At the hearing, we will demonstrate that Anderson's GAD and MDD, individually and taken together, make him unfit for duty. The symptoms of these conditions prevent him from performing, safely and reliably, the duties of his rating and, in fact, even his basic military duties. In the alternative, Anderson requests that the CORB directly overturn the IPEB's decision and find that his GAD and MDD make him unfit for duty.

ABBREVIATED MEDICAL EVALUATION BOARD REPORT

SECTION 1: CLINICAL INFORMATION (TO BE COMPLETED BY MEDICAL OFFICERS)

Date: 06-13-2017 Patient Name: Daniel Dennis Merwin Patient SSN: [REDACTED]

Proposed start date for limited duty: 06-14-2017 Proposed end date (≤ 6 months): 12-13-2017

This period of limited duty is for: (Select one)

- ☒ 1st LIMDU (≤ 6 months) Enlisted ADSM (no referral to service headquarters necessary).
- ☐ 2nd LIMDU (≤ 6 months) Enlisted ADSM (no referral to service headquarters necessary). Note that the first and second TLD periods cannot exceed 12 months cumulatively from the date of the first TLD period.
- ☐ 1st LIMDU (≤ 6 months) Officer ADSM (referral to service headquarters necessary).
- ☐ 2nd LIMDU (≤ 6 months) Officer ADSM (referral to service headquarters necessary).
- ☐ 3rd or subsequent LIMDU periods on Navy and Marine ADSM involving a distinctly different condition than that responsible for the first and second TLD periods (for referral to service headquarters for "departmental review").
- ☐ Placement on LIMDU - If the patient is not already in a LIMDU status - at the same time the patient's case is referred to the physical evaluation board for adjudication.

Diagnosis: (1) <u>Generalized Anxiety Disorder</u>	ICD-9 CM Code	<u>300.02</u>
(2) <u>Major Depressive Disorder, Recurrent, Moderate</u>	ICD-9 CM Code	<u>296.32</u>
(3) <u>IBS-D</u>	ICD-9 CM Code	<u>K58.0</u>

Circumstances of injury/illness:

The patient is a 32-year-old male who presents with anxiety, depression, and co-morbid medical conditions that negatively impact his ability to function at home, work, and in social settings. The GI-confirmed IBS-D is of such severity that it daily interferes with military ADLs.

Treatment plan:

PT referred to IOP (mental health RX). He is on multiple bowel medications and his IBS-D severity requires that he have close proximity to BR facilities at all times.

Limitations from full duty (including whether transfer/TENDU for treatment is indicated, and any PRT limitations):

Ensure access to all medical appointments. Ensure opportunity for 8 consecutive hours of sleep every 24-hour period. The patient should not have access to weapons. The patient should not PCS, deploy, or be placed in austere environments.

SECTION 1: CLINICAL INFORMATION (TO BE COMPLETED BY MEDICAL OFFICERS)

Date: 12-06-2017 Patient Name: Daniel Dennis Anderson Patient SSN: [REDACTED]

Proposed start date for limited duty: 12-13-2017 Proposed end date (< 6 months): 06-12-2018

This period of limited duty is for: (Select one)

- ☐ 1st LIMDU (< 6 months) Enlisted ADJSM (no referral to service headquarters necessary)
- ☐ 2nd LIMDU (< 6 months) Enlisted ADJSM (no referral to service headquarters necessary). Note that the first and second TLD periods cannot exceed 12 months cumulatively from the date of the first TLD period
- ☐ 1st LIMDU (< 6 months) Officer ADJSM (referral to service headquarters necessary)
- ☐ 2nd LIMDU (< 6 months) Officer ADJSM (referral to service headquarters necessary)
- ☐ 3rd or subsequent LIMDU periods on Navy and Marine ADJSM involving a distinctly different condition than that responsible for the first and second TLD periods (for referral to service headquarters for "departmental review")
- ☒ Placement on LIMDU - if the patient is not already in a LIMDU status - at the same time the patient's case is referred to the physical evaluation board for adjudication

Diagnosis: (1) MDD, Recurrent, Moderate	ICD-9 CM Code	296.32
(2) GAD	ICD-9 CM Code	300.02
(3) IBS-D/P	ICD-9 CM Code	K52

Circumstances of injury/illness:

The patient is a 32-year-old male who has anxiety, depression, and co-morbid medical condition that have significantly negatively impacted his ability to function at home and in his social environment. The GI confirmed IBS-D/P is of such severity that it interferes with military ADL's.

Treatment plan:

Patient to complete IOP through ATS. Patient will follow up on outpatient basis with several appointments including individual/group/OT/Rec therapy & meds.

Limitations from full duty (including whether transfer/TEMU for treatment is indicated, and any PRT limitations):

1) Recommend PCS LimDu to Walter Reed to complete extensive medical care 2) Access to all medical appointments 3) No PT 4) Access to bathrooms 4) No late night or overnight duty, ensure 8-hours of sleep in 24h period 5) No access to weapons 4) No PCS/Not deployable/No austere environments

STATUS: PO2/USN
DATE: 06 November 2017

Identification: PO2 Anderson is a 32 y/o USN with 12 years length of service. MOS is CTN. He was referred to the IDES on 21 August 2017 for Irritable bowel syndrome, Generalized anxiety disorder and Major depressive disorder recurrent moderate.

History of Present Illness: Per review of medical records available in AHLTA, ESSENTRIS, and JLV, the following diagnoses are referred to the Navy Central Physical Evaluation Board as duty limiting:

Diagnoses 1-3

1. **Diagnosis 1: Major Depressive Disorder (MDD), Recurrent, Moderate (ICD10: F33.1)**
Diagnosis 2: Generalized Anxiety Disorder (GAD) (ICD 10: F41.1)
Diagnosis 3: Alcohol Use Disorder, Moderate, in early remission (not ratable)

2. **Diagnostic Reasoning:** Per the VA DBQ PSYCH Mental disorders Exam dated 25 September 2017, PO2 Anderson had a history of childhood trauma, had attempted suicide at age 17 which he did not disclose at the time by taking a bottle of aspirin (detail AHLTA Psychiatry Be note dated 04 August 2014), but no history of behavioral health diagnosis or treatment prior to entry into military service in 2005. Per an AHLTA Integrative Health & Wellness Be note dated 16 June 2014, he had anxious mood, irritable bowel, attentional difficulties, nail biting, irritability and insomnia since around age 14. He noted anxiety had also been a problem when he was stationed on a ship in Japan from 2006 to 2009, where he had little down time, worked 12 hour shifts and tried to be the "perfect" worker and he began picking out circular patches of hair in his scalp. In 2014, he was selected for a new job with increased responsibility including leadership and management duties while he noted that he would prefer to do computer work in isolation. He reported at that time that he drank up to 3 drinks, one to two times per week, and would binge, 6 or more drinks once per month or less frequently, but had tried to cut down (AHLTA Psychiatry Be note dated 16 October 2014). He had concerns about his inability to resist daily drinking to manage his, insomnia, anxious ruminations and obsessions despite his growing lack of motivation, worsening mood, and (AHLTA Substance Abuse NY notes dated 17 and 19 March 2015). He had persistent dysphoric mood, intermittent suicidal ideation, irritability, apathy and continued anxiety (AHLTA PSYCHIATRY BE note dated 23 April 2015). He had some benefit to his mood from medication and noted he was more focused and productive but still had anxiety (AHLTA Psychiatry Be note dated 14 May 2015). However, his medication caused excessive sleepiness when the dose was increased and he asked to be tapered off. During times of increased stress, he had anxiety including physical tension, increased heart rate and nausea, and mood swings with suicidal ideation and on one occasion thought about jumping off of a roof related to juggling multiple work responsibilities (AHLTA Psychiatry Be note dated 06 September 2016). In addition, guilt about how he functioned in interpersonal relationships led him to feel suicidal. Though he drank less during active alcohol dependence treatment, he resumed regular drinking of 3 to 4 drinks three to four times per week with binge drinking when he was not working (AHLTA Psychiatry Be note dated 04 January 2017). He stopped taking medication after a change in medication left him feeling flat, but later resumed. However, he noted that his anxiety overwhelmed him and was negatively impacting his ability to be a Sailor (AHLTA Psychiatry Be T-Con note dated 08 June 2017). He had a Command directed safety evaluation after voicing suicidal thoughts and researching methods of suicide on-line, in response to the aftermath of a harassment allegation against him (AHLTA Psychiatry Consult Liaison Be note dated 06 July 2017) which resulted in a loss of rank. When his personal and career circumstances were discussed without his knowledge in front of 150 Service members in an all hands meeting, furthering his

estrangement from Command, he noted increased anxiety and depression with suicidal thoughts of jumping off of a roof (AHLTA Psychiatry Be note dated 06 September 2017). At his most recent follow up, he noted no significant improvement in dysphoric mood, no drinking, and he had continued medication side effects (AHLTA Psychiatry Be note dated 01 November 2017).

3. Treatment History: PO2 Anderson was evaluated for anxiety at Walter Reed National Military Medical Center (WRNMMC) and participated in therapy June to October 2014 but discontinued due to limited impact of visits (AHLTA Substance Abuse at NY note dated 19 March 2015). He self-referred to Substance Abuse Recovery Program Washington Navy Yard in March 2015 for problematic drinking and participated in Level 1 and Continuing Care group therapy until February 2016. He was referred to the Ft. Belvoir Community Residential Treatment Center from 25 March 2015 to 23 April 2015. He was referred to medication management at WRNMMC and Cognitive Behavioral Group therapy for insomnia beginning in 2015. He began Addiction Treatment Services (ATS) at WRNMMC in July 2017 and continued with outpatient individual and group therapy through ATS. He attended the WRNMMC Intensive Outpatient Program from 31 August 2017 to 22 September 2017. He had Transcranial Magnetic Stimulation seven sessions as of 10 October 2017. He continued in behavioral health treatment modalities of individual and occupational therapy and medication management. Medication trials included Escitalopram, Sertraline, and Venlafaxine ER for mood, Melatonin and Ramelteon for insomnia, and Naltrexone for alcohol dependence. Most recent medication included Duloxetine 60mg daily for mood and Eszopiclone 2 mg nightly for insomnia.

4. Symptomatology and Objective Findings: Per the VA DBQ PSYCH Mental disorders Exam dated 25 September 2017, PO2 Anderson had the following symptoms consistent with MDD which included sad mood, feelings of helplessness, feelings of hopelessness, low energy, anhedonia, and chronic suicidal ideation. He had symptoms consistent with GAD which included worry thoughts, rumination, restlessness, sleep disturbance, and panic attacks. His symptoms of Alcohol Use Disorder included a maladaptive pattern of alcohol use, excessive use and tolerance, and of interpersonal or occupational problems occurring as a result of use. His most recent mental status was notable for dysphoric mood, full affect, circumstantial thought processes and no suicidal ideation intent or plan (AHLTA Psychiatry Be note dated 01 November 2017).

5. Limitations and Prognosis: The NMA dated 27 October 2017 stated, "The conditions listed in his LIMDU paperwork and the extensive range of medical appointments CTN2 Anderson's medical practitioners have recommended/assigned for his treatment prevent him from conducting his assigned mission for his MOS/Rate."

PO2 Anderson requires ongoing behavioral health treatment at a fixed MTF. He cannot deploy nor carry and fire a weapon from a behavioral health perspective. The prognosis is guarded. It is not likely that the SM will significantly improve sufficiently to be returned to fully duty in the next 12 to 36 months. The above condition is likely to remain stable over the next 12 months.

6. VA DBQ Findings: C&P exams have been reviewed.

Diagnoses 4

1. Diagnosis: Irritable bowel syndrome with diarrhea (ICD10 Code: K58.0)

2. Diagnostic Reasoning: 32 y/o AD male was diagnosed with IBS manifested by chronic intermittent abdominal pain in 2012. He has reported a long history of GI symptoms dating back to childhood, but symptoms have been more disruptive over the past few years. In 2012 he underwent a CT abdomen/pelvis, which showed focal wall-thickening at the hepatic flexure with proximal stool retention. Colonoscopy in 2012 showed mild congestion in the sigmoid, but biopsies were unremarkable. A subsequent MRE was normal. In Sept 2017 anorectal manometry was normal. He has had frequent follow up with GI since 2016. Symptoms include generalized sharp, crampy abdominal pain about every 1-2 days that peaks prior to defecation and is relieved after bowel movements. He typically has 1-2 soft or liquid stools per day, infrequently with urgency. Abdominal pain is worse with intake of insoluble fibers; however, insoluble

PO2 Anderson, Daniel D.

06 November 2017

Page 2

For Official Use Only – Privacy Act Protected

AR 0022

fibers resolve his liquid stools. Abdominal pain is also worse during physical activity and with increased anxiety/stress. Low FODMAP diet has provided partial relief in frequency of pain and fecal urgency. GI evaluation dated 19Sept17 noted "IBS-D predominant symptoms complicated fecal urgency/soiling, with some element of FODMAP associated osmotic diarrhea. Comprehensive evaluation has otherwise been unremarkable."

3. Treatment History: dietary modification as noted, including low FODMAP and low fructose, peppermint oil 200mg daily for his abdominal cramping, Citrucel, Effexor

4. Symptomatology and Objective Findings: Stools have become more formed over the past few months since starting Effexor and continuing a low FODMAP diet. However, he has ongoing abdominal cramps, which continue to be triggered by physical activity, anxiety, and stress.

5. Limitations and Prognosis: Limited in ability to deploy to austere environment. NMA unavailable at this time.

Continued treatment is unlikely to return Soldier to full duty in 12 months. Condition is stable over 12-36 months. Will require ongoing GI and PCM follow-up and support.

6. VA DBQ Findings: Reviewed and concur.

Diagnoses 5

1. Diagnosis: Obstructive sleep apnea (ICD10 Code: G47.33)

2. Diagnostic Reasoning: Polysomnogram was performed on 04Oct17 at WRNMMC. SM was diagnosed with mild obstructive sleep apnea with AHI of 6/hr. CPAP was recommended.

3. Treatment History: CPAP

4. Symptomatology and Objective Findings: Apnea hypopnea index (AHI) of 7/hr.

5. Limitations and Prognosis: Limited in ability to deploy to austere environment due to need for electricity and fresh water. SM should not engage in any hazardous activities (such as driving) if excessively sleepy. While this condition does not limit his ability to perform his MOS, continued treatment is unlikely to return Soldier to full duty in 12 months. Condition is stable over 12-36 months. SM requires treatment with CPAP.

6. VA DBQ Findings: Reviewed and concur.

Conditions evaluated at the VA DBQ Exam that are not duty limiting, alone or in combination with the SM's other conditions:

- 3. Subjective tinnitus,** with normal hearing bilaterally.
- 4. Disturbance in sensation, cranial nerve V2,** residual OIF orthognathic surgery, improving and not duty limiting.
- 5. Epidermal cysts of the scrotum,** s/p excision.
- 6. Left neck folliculitis,** inactive, no residual scar per VA DBQ examiner.
- 7. Scarring alopecia,** not duty limiting.
- 8. Dry eye syndrome,** not duty limiting.
- 9. Left ankle sprain,** resolved with no residual per VA DBQ examiner.
- 10. Paronychia left hallux,** not duty limiting.
- 11. Right wrist tendinitis,** VA diagnosis, with normal Rom on exam, not duty limiting.
- 12. Right hand 5th proximal phalanx fracture 2008,** well healed without residual per VA DBQ examiner, no pathology found.
- 13. Hemorrhoids,** not duty limiting.

PO2 Anderson, Daniel D.

06 November 2017

Page 3

AR 0023

14. GERD, managed with PPI.
15. Migraine headaches, onset 2008, treated with Alleve or Excedrin.
16. Allergic rhinitis, not duty limiting.
17. Asthma, not listed as a diagnosis by the VA DBQ examiner, diagnosis confirmed in the medical record. Pulmonary function tests were performed on 17Mar11 and revealed normal spirometry, very mild decrease in TLC, and a normal DLCO. Following the administration of methacholine there was a significant decrease in FEV1 consistent with a positive methacholine challenge. Pulmonary noted "symptom complex and positive high dose methacholine challenge test consistent with mild intermittent asthma. His symptoms are confined to allergen exposure, particularly to cats. Given the mild intermittent nature of his disease, he does not require a controller medicine, and will be treated with prn albuterol alone. He was counseled on allergen avoidance. No further workup is required. He is FIT FOR FULL DUTY WITHOUT RESTRICTIONS, and FIT FOR WORLD WIDE DEPLOYMENT WITHOUT RESTRICTIONS." Albuterol was last refilled 18May17.

Competency Statement: SM is deemed mentally competent for pay purposes and is capable of cooperating in and understanding the nature of PEB proceedings.

Past Medical History, Social History, Family History and Review of Systems:

Discussed above, otherwise not pertinent.

Discussion: The VA DBQ examiner did not establish a diagnosis related to the following claims, and there is no evidence of impact on duty in available medical records: left wrist condition, anal fissure, and anal spasms. The SM claimed mental health condition to include schizoid effect. Per an AHLTA Psychology Assessment Be note dated 08 February 2017, PO2 Anderson underwent psychological testing which yielded the impression that he had a pattern consistent with Schizoid personality traits but did not formally diagnoses the SM with a personality disorder. Personality traits do not constitute a ratable condition. The SM claimed sleep disturbance to include insomnia which is subsumed under the diagnosis of Major Depressive Disorder, Recurrent, Moderate as diagnosed by the VA and supported by the medical record.

Diagnoses:

1. Major Depressive Disorder (MDD), Recurrent, Moderate (ICD10: F33.1)
2. Generalized Anxiety Disorder (GAD) (ICD 10: F41.1)
3. Irritable bowel syndrome with diarrhea (ICD10 Code: K58.0)
4. Obstructive sleep apnea (ICD10 Code: G47.33)

Recommendations:

The Medical Board recommends that case be referred to the Central Physical Evaluation Board for the above diagnoses. Conditions did not exist prior to entry into the service. This Service Member has received maximum benefit of military medical treatment.

Mental Disorders
(other than PTSD and Eating Disorders)
Disability Benefits Questionnaire

Name of patient/Veteran: Anderson, Daniel Dennis; c-file: [REDACTED]
Is this DBQ being completed in conjunction with a VA 21-2507, C&P Examination Request?
[X] Yes [] No

SECTION I:

1. Diagnosis

- a. Does the Veteran now have or has he/she ever been diagnosed with a mental disorder(s)?
[X] Yes [] No

Continued on next page
VA Form 2507

C&P Final Report

Page: 2

Name: ANDERSON, DANIEL DENNIS
For DBQ PSYCH Mental disorders Exam

SSN: [REDACTED]

C-number: [REDACTED]

Exam Results Continued

ICD code: F41.1

If the Veteran currently has one or more mental disorders that conform to DSM-5 criteria, provide all diagnoses:

Mental Disorder Diagnosis #1: Generalized Anxiety Disorder
ICD code: F41.1

Mental Disorder Diagnosis #2: Major Depressive Disorder, Recurrent, Moderate
ICD code: F33.1

Mental Disorder Diagnosis #3: Alcohol Use Disorder, Moderate, in early remission
ICD code: F10.20

b. Medical diagnoses relevant to the understanding or management of the Mental Health Disorder (to include TBI): Irritable Bowel Syndrome, Headaches

2. Differentiation of symptoms

a. Does the Veteran have more than one mental disorder diagnosed?
☒ Yes ☐ No

b. Is it possible to differentiate what symptom(s) is/are attributable to each diagnosis?
☒ Yes ☐ No ☐ Not applicable (N/A)

If yes, list which symptoms are attributable to each diagnosis and discuss whether there is any clinical association between these diagnoses:

Symptoms of Major Depressive Disorder include chronic suicidal ideation, sad mood, low energy, feelings of helplessness and hopelessness, and anhedonia. Symptoms of Generalized Anxiety Disorder include worry thoughts, rumination, restlessness, sleep disturbance, and panic attacks. Symptoms of Alcohol Use Disorder include a maladaptive pattern of substance use, excessive use of alcohol, tolerance, and interpersonal/occupational problems as a result of use.

- c. Does the Veteran have a diagnosed traumatic brain injury (TBI)?
☐ Yes ☒ No ☐ Not shown in records reviewed

3. Occupational and social impairment

- a. Which of the following best summarizes the Veteran's level of occupational and social impairment with regards to all mental diagnoses? (Check only one)

☒ Occupational and social impairment with deficiencies in most areas, such as work, school, family relations, judgment, thinking and/or mood

- b. For the indicated level of occupational and social impairment, is it possible to differentiate what portion of the occupational and social impairment indicated above is caused by each mental disorder?
☐ Yes ☒ No ☐ No other mental disorder has been diagnosed

If no, provide reason that it is not possible to differentiate what portion of the indicated level of occupational and social impairment is attributable to each diagnosis:

Symptoms of Major Depressive Disorder and Generalized Anxiety Disorder both significantly contribute to the service member's level of occupational and social impairment, to the extent that it is not possible to tease out how each contributes independently of the other. Symptoms of Alcohol Use Disorder are in early remission.

- c. If a diagnosis of TBI exists, is it possible to differentiate what portion of the occupational and social impairment indicated above is caused by the TBI?
☐ Yes ☐ No ☒ No diagnosis of TBI

SECTION II:

Clinical Findings:

1. Evidence Review

Evidence reviewed (check all that apply):

2. History

a. Relevant Social/Marital/Family history (pre-military, military, and post-military):

The service member grew up in California. His parents divorced when the service member was young and he was raised by his father. He has two sisters with whom he grew up. He also has a half brother and a half sister. He reported that his childhood was unstable; his father was verbally abusive during childhood and "sometimes physically" (abusive).

The service member is single and has never been married. He is not currently dating anyone. No children. Socially, the service member reported that he has one good friend to whom he keeps in touch via text but he has few other social connections. He just started talking to his mother and sisters again this past year, "I've been living in isolation". He is not particularly close with anyone. The service member spends his free time alone, watching TV and doing programming.

b. Relevant Occupational and Educational history (pre-military, military, and post-military):

The service member did not do well in school. He typically got Ds and stated that, "I don't learn that well in school". He denied that he was ever tested for a learning disability. He graduated high school and moved out of state, he tried to go to college and started working. He joined the Navy at age 20.

The service member joined the Navy in November 2005. Rank is E5, rate is cryptologic technician networking. He is currently stationed at Ft. Meade where he has been since August 2012. He has also been stationed in Pensacola, Florida and USS Essex. No combat deployments.

c. Relevant Mental Health history, to include prescribed medications and family mental health (pre-military, military, and post-military):

No history of mental health treatment prior to the period of military service was reported.

The service member first began participating in mental health treatment

in August 2012. He has been in treatment regularly for the last several years. Current medications are Effexor, Rozerem, and Naltrexone. He just completed the Intensive Outpatient Program which he had done for 30 days. He meets with his psychiatrist weekly. He also participates in weekly individual therapy. He was hospitalized in 2015 for 30 days at Ft. Belvoir for inpatient substance abuse treatment. No other psychiatric hospitalizations.

According to the c-file, the service member has been diagnosed with Major Depressive Disorder, Generalized Anxiety Disorder and Alcohol Use Disorder.

- d. Relevant Legal and Behavioral history (pre-military, military, and post-military):

None

- e. Relevant Substance abuse history (pre-military, military, and post-military):

The service member stated that he has been sober for 70 days. Prior to this, he would have approximately 5 ounces of liquor per day and 2 beers daily. He started to drink heavily while he was stationed in Japan. He is currently going to substance abuse treatment at Walter Reed National Military Medical Center.

- f. Other, if any:

None

3. Symptoms

For VA rating purposes, check all symptoms that actively apply to the Veteran's diagnoses:

- ☒ Depressed mood
☒ Anxiety
☒ Near-continuous panic or depression affecting the ability to function independently, appropriately and effectively
☒ Chronic sleep impairment

- [X] Flattened affect
- [X] Disturbances of motivation and mood
- [X] Difficulty in establishing and maintaining effective work and social relationships
- [X] Difficulty in adapting to stressful circumstances, including work or a worklike setting
- [X] Suicidal ideation
- [X] Obsessional rituals which interfere with routine activities

4. Behavioral observations

The service member reported that he started to have problems with anxiety while on the USS Essex. He stated that he experiences "anticipation anxiety" and he worries about "everything". He is worrying about scheduled appointments, uniform inspections, evaluations, "at the moment, it's been mostly work related". He stated that he picks his hair, he bites his nails, he is often fidgety. He stated that he feels restless, he feels tense and is "stressed out overall". He stated that he worrying 50-70% of the day and he has a hard time controlling the worry.

The service member also endorsed symptoms of depression. He has times when he will sleep most of the day, he will not want to engage in activities. He feels tired, experiences low motivation. He often feels flat and "I try not to think about the things that make me sad...if I do, I start to feel suicidal". He rated his mood at a 3 or 4 on a 10 point scale (with 10 being high). Appetite is low, in part due to medical issues (irritable bowel syndrome). Energy levels are low. He stated that he experiences anhedonia, he has times when he no longer engages in activities but he is trying to do programming more regularly. He reported feelings of helplessness and hopelessness about his life, his future. He stated that he had a time when he felt suicidal, he wondered about the purpose of life, why does he get up every day. He reported ongoing suicidal ideation, but he denied current suicidal plan or intent. He noted that when he is drinking, he experiences more frequent suicidal ideation. He had a suicide attempt at age 16 where he swallowed a bottle of aspirin, but he denied any other suicide attempts.

The service member endorsed sleep disturbances. He has an upcoming sleep study scheduled to rule out sleep apnea. He reported that he typically goes to bed at 10pm; he denied frequent sleep onset problems. Once asleep, the service member wakes up during the night, "there's usually three or four times a night". He might be awake for only "minutes" but he can fall right back asleep. He gets out of bed at 6am. He is bed for 7-8 hours but his sleep is restless. The service member also endorsed mild episodes of sleep paralysis which occur two or three times a week; he stated that it might

Subj: NON-MEDICAL ASSESSMENT (NMA) IN THE CASE OF CTN2 ANDERSON,
DANIEL, XXX-XX- [REDACTED] USN/ACTIVE DUTY

Ref: (a) SECNAVINST 1850.4E, "Department of the Navy (DON) Disability Evaluation Manual," April 30, 2002

1. **PURPOSE:** The Non-Medical Assessment (NMA) is vital to the timely, fair, and transparent determination of whether a Marine or Sailor is Fit (or Unfit) for continued Naval service. The NMA is not a Fitness Report highlighting military character, but is the Commanding Officer's unbiased and accurate comments describing how the medical condition impacts the service member's ability to function within his/her rank and MOS/rating.

a. Part I, the "Questionnaire," collects required facts regarding the service member.

b. Part II, the "Commanding Officer's Comments," is where the PEB relies on the Commanding Officer's comments to explain how the member performs the duties of his/her MOS/Rate with their underlying medical condition(s). The NMA must be signed by the Commanding Officer or acting by direction.

2. **PART I - QUESTIONNAIRE:** The following assessment to assist the PEB in their determination of Fitness/Unfitness in the case of SNM: PO2 ANDERSON, DANIEL, XXX-XX- [REDACTED] USN/ACTIVE DUTY.

a. Service member's MOS/Primary Specialty; Rate/NEC: CTN/0000.

b. Member's current position or assignment: Non-working patient.

c. Is the member currently working outside of his/her specialty because of the medical condition? (Yes ☒ No ☐). If the member is working outside of his/her specialty, could the member perform in his/her rating? (Yes ☐ No ☒.

d. When did the member last pass a "full" PRT/PFT/CFT: March / 2017.

e. Did the member take the most recent PRT/PFT/CFT? (Yes ☐ No ☒ Partial ☐.

• If "No," why didn't the member take the PRT/PFT/CFT? Member's LIMITED DUTY paperwork is being considered for a waiver from PRT.

- If "Partial PRT/PFT/CFT," what events were waived and why? Pending CWG-6 medical waiver review.

f. Member's height and weight: 72in 189lbs. If not within weight standards, what is the member's body fat percentage? N/A.

g. Is the member within weight and body fat standards? (Yes ☒ No ☐). If "No," is the member on an official weight control program? (Yes ☐ No ☐ NA ☒).

h. To your knowledge, is the member fully attending all appointments and complying with all recommended treatments? (Yes ☒ No ☐).

- Has the member complied in the past? (Yes ☒ No ☐).
- If non-compliant, did the appropriate authority advise the member in writing of the medically proper course of treatment, therapy, medication, or restriction? (Yes ☐ No ☐).
- If the member is non-compliant, please explain why. N/A

i. What is the average number of work hours per week that the member's condition required the member to be away from his/her current duties for treatment, evaluation, and/or recuperation? 30 hours.

j. Is the member being processed for separation due to misconduct at a court-martial or administrative separation board proceeding? (Yes ☐ No ☒). [If "Yes," do not submit the case to the PEB until all misconduct proceedings are complete per ref (a) 3203(f)(6) because separation due to misconduct supersedes disability processing. If "No" proceed to paragraph k.]

- If "Yes" to the above, please identify the type of proceeding: ☐ Administrative Separation Board; ☐ Board of Inquiry; ☐ Summary Court-Martial; ☐ Special Court-Martial; or ☐ General Court-Martial and state the expected completion date: _____).
- Has the Commanding Officer notified PERS/MMSR-4 this member is being processed for separation due to misconduct? (Yes ☐ No ☐ NA ☒).
- Does PERS/MMSR-4 request disability processing for this member concurrent to the misconduct proceedings? (Yes ☐ No ☐ NA ☒). (Concurrent Processing requires submission to the ASN (M&RA) for ultimate disposition in accordance with ref (a) 3403(c))

k. What is the member's current length of service and date of entry into active/reserve

- LOS: 11 years / 11 months; ADSD/AFADBD: November / 2005.
- EAOS/EAS: October / 2021.
- Active Duty Years: 11 years / 11 months.
- Reserve Satisfactory Years: N/A.
- Reserve Retirement Eligible (Yes ☐ No ☒).
- Approved Retirement Date (if applicable): N/A.

l. Considering the member's current physical condition, is he/she worldwide assignable? (Yes ☐ No ☒).

m. Does the member have good potential for continued service in his/her present physical and mental condition? (Yes ☐ No ☒). If "No," please explain why not.

Member's medical condition has prompted a review by Department of the Navy Central Adjudication Facility to see if the member can retain his currently level of security clearance, which prevents him from performing the regular duties as a Cryptologic Technician Networks (CTN). Also, the member's current schedule of appointments and required treatment does not allow enough time in the normal course of a week to execute the requirements of his assigned duties.

n. Does the member desire to continue his/her military service; the PEB will not judge the member's request to separate (or remain) as a negative reflection of his/her dedication to serve in the naval service? (Yes ☐ No ☒). (Please personally obtain the member's express desire). The member desires to discontinue his military service.

o. Regarding Permanent Limited Duty (PLD) of active duty members, would you recommend that Naval Personnel Command/Headquarters Marine Corps (MMSR-4) authorize the member's retention on active duty in a Permanent Limited Duty (PLD) status, if found Unfit? (Yes ☐ No ☒).

- Has the member ever served in a PLD status? (Yes ☐ No ☒.
- Do you recommend PLD unconditionally? (Yes ☐ No ☒); or
- Do you recommend PLD only to complete retirement eligibility? (Yes ☐ No ☒ NA ☐); or
- Do you recommend PLD only to complete EAS? (Yes ☐ No ☒ NA ☐.
- If "No" to any of the PLD recommendations above, please explain why.

p. Has the member ever forward deployed in support of Operation Enduring Freedom, Operation Iraqi Freedom, or other Combat Operations? (Yes ☐ No ☒.

q. For Combat Zone determination purposes, did the member's injury occur in a combat-zone tax exclusion area as defined in DoD Financial Management Regulation, Vol. 7A, Chapter 44, Section 440103(a) [Available at <http://www.defenselink.mil/comptroller/fmr/>]? (Yes ☐ No ☒.

- If "Yes," please state where and how the injury or illness occurred. Additionally, please state what document(s) identify the geographic location of the member's injury.

r. For Combat-Related determination purposes, did the cause of the member's injury occur:

- (i) as a direct result of armed conflict, (Yes ☐ No ☒.
- (ii) while engaged in extra hazardous service, (Yes ☐ No ☒.
- (iii) under conditions simulating war; (Yes ☐ No ☒.
- (iv) by an instrumentality of war. (Yes ☐ No ☒.

- If "Yes," to any of the above, please state where and how the injury or illness occurred. Additionally, please state what document(s) identify the cause of the member's injury. N/A

s. Please provide the member's Defense Travel Service (DTS) Agency Program Coordinator's (APC) name Jim Potter; phone: 667-812-2258; and email jepotte@nsa.gov.

3. **PART II – COMMANDING OFFICER'S COMMENTS:** The NMA is a critical element of the Physical Evaluation Board's (PEB) adjudication. The PEB relies on your comments to explain how your Marine/Sailor's medical condition impacts his/her ability to perform the duties of his/her MOS/Rate, and the resulting impact on the command. Please note, the NMA is not an evaluation for promotion, and remains in the member's medical record. To ensure a comprehensive NMA, you must comment on all of the member's referred medical conditions and you are encouraged to comment on any of the member's VA claimed conditions. Please use additional pages as necessary.

a. The Commanding Officer submits the following comments so the PEB can make determination of Fitness/Unfitness for this member: PO2 ANDERSON, DANIEL, XXX-XX-
USN/ACTIVE DUTY.

b. How does the medical condition(s) impact the member's work capacity in relation to his/her MOS/RATE? (MOS/RATE requirements can be found in MCO 1200.17A (4 Jun 09) for Marines; Volume 1 of NAVPERS 18068F October 2010 for Sailors).

Upon receipt of CTN2 Anderson's LIMDU paperwork and July 2017 NJP, assigned Special Security Officer (SSO) recommended and I endorsed service member's TS/SCI classified access and classified facility access badge be suspended, Security Access Eligibility Report (SAER) released, and process initiated for DoD Clearance Adjudication Facility (CAF) to determine if he should maintain a clearance. Final outcome of this decision is pending. The conditions listed in his LIMDU paperwork and the extensive range of medical appointments CTN2 Anderson's medical practitioners have recommended/assigned for his treatment prevent him from conducting his assigned mission for his MOS/RATE. Specifically, not having classified material/facility access prevents him from conducting his assign mission. Should his clearance be revoked, he would likely be required to cross-rate.

c. Include an explanation on what Mission Essential Tasks the member substantively can or cannot do regarding the primary duties of his/her MOS/Rate.

Without TS/SCI classified access and with his classified facility access badge suspended, Security Access Eligibility Report (SAER) released, and DoD Clearance Adjudication Facility (CAF) assessment for clearance eligibility pending, CTN2 Anderson is currently limited in his ability to complete primary duties assigned of his MOS/Rate and is unable to complete Mission Essential Tasks associated with his MOS/Rate. He is however, contributing approximately 10 hours weekly in a general mission capacity that is not specific to his MOS/Rate outside of classified facilities at this time.

d. Submit Performance Evaluations/Fitness Reports (or Proficiency & Conduct Marks) for the two years immediately prior to the date the MEB was initiated.

14NOV16-15NOV15-Promotable, 15NOV16-16SEP01-Early Promote, 16SEP02-16NOV15-Non-observed, 16NOV16-17JUL20-Significant Problems.

e. Submit any pertinent information in reference to line of duty determinations and investigations that affect the member's unfitting condition(s).

Upon receipt of CTN2 Anderson's LIMDU paperwork and July 2017 NJP, assigned Special Security Officer (SSO) recommended and I endorsed service member's TS/SCI classified access and classified facility access badge be suspended, Security Access Eligibility Report (SAER) released, and process initiated for DoD Clearance Adjudication Facility (CAF) to determine if he should maintain a clearance. Final outcome of this decision is pending.

4. CONTACT INFO. For follow-on questions concerning this NMA, the POC at this command is Herbert M. Lamb, CTNCM, Command Senior Enlisted Leader, Cyber Strike Activity SIXTY THREE; (Commercial) 443-479-6065; hmlamb@cybercom.mil (email).

Follow up: as needed .

Note Written by ANDRADA, TEOTIMO F @ 24 Oct 2017 1022 EDT**Walter Reed National Military Medical Center****Sleep Disorders Center**8901 Rockville Pike
Bethesda, MD 20889
Phone: 301-295-4547 Fax: 301-319-8197**Patient Name:** Anderson, Daniel**SSN:** [REDACTED]**Study Date:** 10/4/2017**Scorer:** L. Davis, RPSGT**Referring Provider:** Dr. Khramtsov**POLYSOMNOGRAM REPORT****Technical Description:**

Physiologic data were collected using a computerized Sensormedics polygraph interfaced with Somnostar Z4 amplifiers. The recording montage consisted of central, frontal and occipital EEG, EOG, chin EMG, thermocouple and pressure transducer airflow, chest and diaphragmatic movement, combined leg EMG, tracheal sounds and pulse oximetry. The patient was monitored throughout the study via infrared CCTV and recorded for review. Respiratory events and limb movements were scored according to *The AASM Manual for the Scoring of Sleep and Associated Events, Version 2.3*.

Polysomnographic Data:

The patient took 3mgs Eszopiclone prior to the study. The study duration was 419.5 minutes. The recorded total sleep time was 367.5 minutes with a sleep efficiency of 87.6%. The patient's latency to sleep was 16.5 minutes. The REM latency was 174.5 minutes. Sleep stage distribution revealed 12.9% Stage N1, 58.1% Stage N2, 16.1% Stage N3, 12.9% Stage REM and wake after sleep onset was 35 minutes. There were 100 arousals and 0 awakenings resulting in a total arousal index (TAI) of 16.3/hour of sleep.

There were 0 apneas (0 obstructive, 0 centrals, 0 mixed) and 37 hypopneas with an **apnea hypopnea index(AHI) of 6./hour**. The apnea hypopnea index during supine sleep(88 minutes) was 19/hour and 2/hour during non-supine sleep(280 minutes). The hypopnea index was 6./hour. The Central apnea index was 0/hour. Hypopneas were scored using nasal pressure signal drop by at least 30% followed by arousal or 3% oxygen desaturation..

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Page 10

AR 0053

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Oxygen saturation was normal at baseline. Oxygen saturation remained between 86% and 97% with mean value of 95% throughout the study. During the study the oxygen saturation was below 90% for 1 percent of the total sleep time. The average heart rate was 73 beats per minute. There were 0 PLMS and 0 PLMS with arousals with a PLMS index of 0/hour and a PLMS arousal index of 0/hour.

Medical Interpretation:

The patient underwent a Diagnostic PSG: Epworth Sleepiness Scale was 20/24. Sleep efficiency was good and there was adequate total sleep time to establish a diagnosis. Sleep architecture was disrupted. The patient had an AHI consistent with mild sleep apnea. The EKG did not demonstrate arrhythmias.

Diagnosis:

1. Obstructive Sleep Apnea(G47.33)

Suggestions for Clinical Care:

1. AutoPAP titration with pressures of 6-15 cm H2O and close clinical follow up.
2. Recommend sleeping in the lateral position, obtaining 7-8 hours of sleep per night, avoid of alcohol or other sedatives and maintaining an ideal body weight as these can improve sleep quality.
3. The patient should be counseled- as is done with all patients directly seen at this SDC- not to engage in any hazardous activities (such as driving) if excessively sleepy. Such sleepiness is to be reported to their physicians for further evaluation and treatment.

Interpreted by:

Andrei Khramtsov, MD
Diplomate, Sleep Medicine

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.
Procedure: MT 120%. TMS Treatment for depression session #13 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.10 minutes. A procedural time out was done during which settings and patient was re-identified.
PROGRESS IN MEETING GOALS:
This is session # 13 with MT level at therapeutic treatment level for entire session.
Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and after discussion with the team, it was decided today will be SM last TMS appointment, as SM will be away on training for some time. ZUNG depression = 45, PHQ 9=13.

S/O Note Written by LANDE, RAYMOND G. @ 20 Oct 2017 1245 EDT

Reason for Visit

Visit for: Attending Note: A procedural time out was done during which settings and patient was re-identified.
45 minutes
Purpose of visit was for session of Transcranial Magnetic Stimulation. SM is receiving treatment for depression.
Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.
Patient arrived for TMS without evidence of distress. Confirmed that there was no metal above the neck. Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes. WRNMMC PAO with SM's permission in room.
Objective
Plan: SM next session scheduled.

(Added after encounter was signed.)

S: Intensive Outpatient Program Seeking Safety group, topic "Honesty." Time 1000-1100. Discussion of the role of honesty in recovery, ways in which honesty gets impacted in active substance abuse, and situations which make honesty more difficult. Particular discussion of honesty with children and with therapists, and both the difficulties and benefits of open direct communication when emotions are high. SM actively engaged in group discussion, processed difficulties with AA, spoke about feeling judged and that things get oversimplified in AA. Peers and this SW acknowledging 'absolute' talk in AA while also reframing that as having basic principles which are helpful in time of crisis, and that can be explored more fully and individually in treatment and/or with sponsor.~

O: Client arrived on time to session. Alert and oriented x 3.~

Appearance: Appropriate~

Behavior: Appropriate~

Speech: Within Normal Limits~

Thoughts: Logical, linear, goal-directed~

Mood: Depressed~

Affect: Congruent~

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #12 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 12 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BAHROO, BHAGWAN A @ 19 Oct 2017 1318 EDT

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression (12:35-13:20).

Subjective

Attending Note: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 22/ # 12 at 120% MT.

A/P Written by SPEVAK,CHRISTOHER J @ 18 Oct 2017 1326 EDT

1. Alcohol dependence, uncomplicated: S: The SM participated in a weekly group discussion about medical perspectives on substance use disorders. Topics of this group range from the history of substance use, psychoeducation on substance use disorders, recent medical advances in understanding substance use disorders and treatments. Participants were also encouraged to discuss their own personal perspectives on the topics discussed.

O: SM arrived on time for group and was dressed appropriately for the setting. The SM was oriented x3

Appearance: neat and clean Behavior: Appropriate, engaged in group

Speech: WNL Thoughts: WNL

Mood: Good Affect: Congruent

Insight: Fair Judgment: Fair

SI/HI/AVH: None Reported Med/Pain Issues: None Reported

A: SM actively participated in group. Participants were respectful of each other's perspectives and exhibited understanding of the topic as evidenced by group discussions. Participants were encouraged to ask questions and were answered accordingly.

P: Next medical group to will continue to build upon the topics already discussed and explore new approaches to treatment. Participants will follow up with their primary psychiatric/medical providers with any specific concerns about their personalized treatment plans.

SM was not in Finding Meaning Group 1000-1045.**S/O Note Written by DAVIS, KRISTEN KATHLEEN @ 18 Oct 2017 1338 EDT****History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Process Group 0730 - 0845

S: Topics discussed: Introductions, feeling words, and six categories of emotion. Group members described how they are feeling and where these feelings would fall in the six categories (mad, glad, sad, hurt, afraid and guilt/shame). SM identified feeling mad/sad for having to work last night and glad that the process is moving along for him to sell his house. SM helped orient new members when making introductions.

O: SM arrived late to group. SM was oriented x3.

Appearance: Appropriate Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: Stable

Affect: Congruent

Insight: Fair

Judgment: Fair

SI/HI: None Current

Med/Pain Issues: None expressed

A: SM participated appropriately in discussion. SM demonstrates commitment to sobriety/recovery.

P: SM will continue with groups as assigned.

Amended Report Text:

ADDITIONAL HISTORY: CT examination with right-sided colonic thickening and equalization of small bowel. Recent colonoscopy and without lesion the terminal ileum a concern stenosis or inflammation of the distal ileum.

TECHNIQUE: Standard MR enterocleisis protocol; Three plane localizer, coronal FIESTA, axial T2 SS FSE, axial and coronal T2 SS FSE, axial and coronal FIESTA fat sat, axial SPGR in and out of phase, axial and coronal LAVA pre-and postcontrast MRI of the abdomen.

COMPARISONS: CT abdomen/pelvis 10/11/12

FINDINGS:

Bowel loops are adequately distended without focal stenosis, stricturing, or luminal narrowing. There is normal bowel peristalsis and motion observed on the cinematic images. Minimal mural thickening of the mid jejunum observed at the left upper quadrant without corresponding abnormal mucosal enhancement, stricturing or stenosis.

The liver and gallbladder are normal without intra-or extrahepatic biliary ductal dilatation. The spleen, pancreas, adrenals, and kidneys are normal.

No intra-abdominal mass or fluid collection. No enlarged abdominal or pelvic lymph nodes.

Osseous marrow signal is nonpathologic.

IMPRESSION:

No abnormal areas of enhancement or mural thickening within the gastrointestinal system, specifically evidence of active inflammation at the site of previously observed colitis on CT examination 10/11/12. Correlate with patient's symptomatology.

Reason for Appointment: Written by CHELLAPPA, MARY R @ 16 Oct 2017 1114 EDT
TMS

S/O Note Written by BRAGGS, DEBORAH C @ 16 Oct 2017 1150 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #11 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.10 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 11 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for Thursday.

S/O Note Written by LANDE, RAYMOND G. @ 16 Oct 2017 1249 EDT

Reason for Visit

Visit for: Attending Note: A procedural time out was done during which settings and patient was re-identified.

45 minutes

Purpose of visit was for another session of Transcranial Magnetic Stimulation for depression.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS without evidence of significant distress. Confirmed that there was no metal above the neck. Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Objective

Plan: SM scheduled for next session.

Received call from pt stating he has been on cymbalta 60 mg for five days after stopping effexor xr 75 mg every morning as per our taper plan prior to that. Pt states the day before his call, he began experiencing brain zaps, was finding it hard to concentrate, and has felt nausea for the two days prior to his call. He finds it hard to focus on driving. He asks what he can do about his effexor withdrawal and about being put on quarters. He is currently attending ATS IOP. Returned pt's call. We discussed adding back effexor xr 37.5 mg po qam to counteract his effexor withdrawal. Discussed taking it in the morning and his cymbalta at night to minimize drug interaction and potential for serotonin syndrome. Also prescribed hydroxyzine 10 mg, up to two tabs daily for agitation/nausea. Agreed to leave quarters slip at front desk for him to pick up, putting him on quarters until the morning of 18OCT. He has follow up with this provider the week of Oct 30th as he is in transition class next week.

The Patient is a 32 year old male.
 SM asked to speak with this writer as he is feeling 'out of it' due to withdrawal from his psychotropic medication Effexor. SM reported having 'brain zaps' in which he forgets his train of thought and has difficulty communicating. SM stated he's having trouble focusing in group. SM stated he is also feeling stressed regarding the pressures his command is putting on him at work. SM shared that he will ask his PCM for updated limdu paperwork to specify that he cannot be on watch and should not be driving back and forth from WR to Ft. Meade unless he has adequate time to do so. SM stated he would call Dr. Tobar for guidance. SM reported he spoke with Dr. Tobar and she put him on 48 hours SIQ and is re-prescribing a low dose of Effexor. SM stated he will attend TMS appointments and his PCM appointment tomorrow but would otherwise not be at appointments until Wednesday. SM appeared anxious and presented as tearful. SM will reschedule individual appointment for Wednesday.

S/O Note Written by HANGEMANOLE, DESPINA C @ 16 Oct 2017 1113 EDT**History of present illness**

The Patient is a 32 year old male.

S: The group discussed addictive behaviors, meetings and relationship with command. SM reported that he does not interact as regularly with his command as many others in group but mostly does not get adverse reactions from them about his need for treatment. SM stated that he could understand how many in leadership may not understand addiction or the need for treatment just based on their lack of life experience with it. SM reported that he could understand how people may engage in addictive behaviors other than substance abuse and acknowledged that it's likely an outward manifestation of something going on internally with that person. ~O: SM arrived on time for group. SM was oriented x3. ~Appearance: Appropriate Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: Anxious

Affect: Congruent

Insight: Fair

Judgment: Fair

SI/Hi: None Current

Med/Pain Issues: None expressed ~A: SM is sharing openly and honestly with the group. SM gives appropriate feedback and appears engaged in group. SM can be tangential but is conscious of this and appears to be actively working to be more concise. ~P: SM will continue with IOP groups as scheduled.

The Patient is a 32 year old male.

He reported: Encounter Background Information: Seeking Safety Group

Group 1000-1115:

S: SM actively participated in the seeking safety group. SM reviewed coping skills, and commitments made at the previous group session. SM denies substance use or any unsafe behavior since the last group session. The group topic was "Safety". The group focused on learning healthy safe coping skills. The group members identified safe and unsafe coping skills they have been using. The provider explained the three stages of healing from PTSD and substance abuse; safety, mourning and reconnection. The group members discussed what safety means to them and the signs of recovery. The group reviewed the examples of safe coping skills in the handout and identified some safe coping skills to practice. At the end of the group session, the group members were asked to fill out a commitment sheet: good coping skills and a commitment they will complete before the next group session.

O: Group member reported on time. SM was interactive in the group.

Behavior: Appropriate

Psychosis: None evident

Speech: WNL

Thoughts: Clear, organized

Mood: Positive

Affect: Congruent

SI/Hi: None expressed

Pain: None indicated

A: SM appeared open to the training environment and attempted to execute commands. No evidence of SI/Hi. P: SM will continue group next week.

Reason for Appointment: Written by CHELLAPPA, MARY R @ 13 Oct 2017 1213 EDT
TMS

S/O Note Written by POURZAND, MIRIAM @ 13 Oct 2017 1216 EDT

History of present illness

The Patient is a 32 year old male.

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression 45 minute session.

Subjective

TMS Session: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 20/ #10 at 120% MT.

Objective

SM next session scheduled.

S/O Note Written by BLOBERG, BRIAN @ 13 Oct 2017 1232 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre Procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress.

Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #10 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09

Medical Record

The Patient is a 32 year old male.

He reported: Encounter Background Information: Seeking Safety Group

Group 1000-1115:

S: SM actively participated in the seeking safety group. Patient reviewed the "check in" handout at the start of the session.

Patient shared all coping skills, and commitments completed since the previous group meeting. Patient denies any alcohol or substance use and any unsafe behaviors since the last group. Today's group today focused on harshness versus compassion. The group reviewed the handout provided by the therapist. The group members reviewed the examples of harsh self-talk and compassionate self-talk in the handout and discussed the ones they related to. The therapist discussed how harshness relates to PTSD and substance abuse. The group collectively talked about how compassion promotes growth and harshness prevents growth. The patient discussed ways to increase compassion in sobriety. At the end of the group session, the group members filled out a commitment sheet to be reviewed at the next group session: good coping skills and a commitment they will complete before the next group session.

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used:** CBT**Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. Therapist and patient discussed recent events in his life. Patient continues to endorse significant frustration related to his interactions with his command. Therapist and patient processed his frustration and problem solved potential solutions. Patient stated that he was able to effectively end interaction with a female he was interested in after recognizing that they were not on the same page about what they wanted. Therapist provided positive reinforcement for this as this is different than his previous behavior. Patient also discussed initial interest in a new romantic partner. Patient is working to identify reasonable next steps for his future.

Response to treatment: ☐ None ☒ Some ☐ Significant ☐ Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

ASSESSMENT

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Diagnosis:

Axis I: Generalized Anxiety Disorder
 Major Depressive Disorder, Single Episode, Moderate
 Alcohol Abuse Disorder
 Axis II: Diagnosis deferred on Axis II
 Axis III: Deferred
 Axis IV: Financial stress, lack of social support, occupational/legal stressors
 Axis V: 60

Prognosis: () Excellent (X) Good () Fair () Guarded () Poor

Patient's capacity to participate in and benefit from therapy is evidenced by:

(X) good insight/judgment, (X) a desire to resolve their disorder, (X) verbal agreement to the treatment plan

Safety Risk:**Non-Modifiable Factors:**

Gender (risk factor if male):	Yes
H/O Suicide Attempts:	Yes – twice in adolescence
Organized Plan:	No
Chronic Psychiatric Disorder:	Yes
Recent Psychiatric Hospitalization:	No
H/O Abuse or Trauma:	Yes – sexual abuse as a child
Chronic Physical Illness:	No
Family H/O Suicide/Attempts:	Yes – both sisters have attempted
Other Recent Loss:	No
Chronic Pain:	No
Age (risk factor if <25 or >60):	No

Modifiable:

Suicidal Ideation/Plans/Intent:	Yes- intermittent fleeting thoughts
Suicide Preparatory Behavior:	No
Access to Lethal Means:	No
Poor Treatment Compliance:	No
Hopelessness:	Yes
Psychic Pain/Anxiety:	Yes
Acute Event:	No
Insomnia:	No
Low Self-Worth:	No
Impulsivity:	Yes
Substance Abuse:	Yes, previously
Financial Stress:	Yes
Legal Stress:	Yes

Protective:

Strong Therapeutic Alliance:	Yes
Positive Coping Skills:	Yes
Responsible to/for Family:	No
Responsible to/for Pet:	
Frustration Tolerance	Limited
Resilience:	Yes
Good Reality Testing:	Yes
Amenable to Treatment:	Yes
Social Support:	No

Reason for Appointment: Written by CHELLAPPA, MARY R @ 12 Oct 2017 1204 EDT
TMSS/O Note Written by POURZAND, MIRIAM @ 12 Oct 2017 1209 EDT**History of present illness**

The Patient is a 32 year old male.

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression 45 minute session.

Subjective

TMS Session: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses

per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes. Adjustments were made to accommodate comfort. This session number 19/ #9 at 120% MT.
Objective
SM next session scheduled.

S/O Note Written by BLOBERG,BRIAN @ 12 Oct 2017 1229 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre Procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #9 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS: This is session #9 for depression with MT level at therapeutic treatment level for entire session.

Post procedure: SM monitored briefly. SM had no reports of distress associated with TMS.

PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

A/P Written by SPEVAK, CHRISTOHER J @ 11 Oct 2017 1045 EDT

1. Alcohol dependence, uncomplicated: S: The SM participated in a weekly group discussion about medical perspectives on substance use disorders. Topics of this group range from the history of substance use, psychoeducation on substance use disorders, recent medical advances in understanding substance use disorders and treatments. Participants were also encouraged to discuss their own personal perspectives on the topics discussed.

O: SM arrived on time for group and was dressed appropriately for the setting. The SM was oriented x3

Appearance: neat and clean Behavior: Appropriate, engaged in group

Speech: WNL Thoughts: WNL

Mood: Good Affect: Congruent

Insight: Fair Judgment: Fair

SI/II/AVH: None Reported Med/Pain Issues: None Reported

A: SM actively participated in group. Participants were respectful of each other's perspectives and exhibited understanding of the topic as evidenced by group discussions. Participants were encouraged to ask questions and were answered accordingly.

P: Next medical group to will continue to build upon the topics already discussed and explore new approaches to treatment. Participants will follow up with their primary psychiatric/medical providers with any specific concerns about their personalized treatment plans.

S/O Note Written by BURTON, CARA N @ 11 Oct 2017 1217 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Educational Group: Finding Meaning (1000-1100): Spirituality and Personality

S: The focus of today's session was the connection between personality and spirituality. Group members were encouraged to assess their personalities during active substance use and at the current point of their recovery. They also reflected on how their personalities have changed since being sober. This SM shared openly about the ways in which substance use allowed him a release from his cares or ongoing frustrations. He engaged actively throughout the session and commented on what others shared appropriately.

O: SM arrived on time for group, was oriented x4 and engaged actively during the group exercises and discussion.

Appearance: Neat, clean, dressed appropriately to season

Behavior: Appropriate, engaged

Speech: WNL

Thoughts: Logical, WNL

Mood: Stable

Affect: Congruent, full range

Insight: Fair

Judgment: Fair

SI/Hi: None reported

Med/Pain Issues: None reported

A: SM interacted with group members and facilitators. He demonstrated an understanding of the concepts presented.

P: SM will attend the next group as scheduled.

Note Written by RAGLAND, MARY @ 16 Oct 2017 0952 EDT**Process Group 0730-0845**

S: Topics discussed: Introductions (Name, relationship to the military, substance of choice, sobriety date, and what brought Ct to ATS), Review of Group Rules/Expectations. Demonstrated understanding of Group Rules and assisted in explaining to new group members. Ct again spoke of his father's emotional abandonment of him and it's impact on his emotions--did not connect this to his substance use..

O: Ct arrived over 30 minutes late for group. Ct alert and oriented x 3.

Appearance: Appropriate for weather /situation

Behavior: Appropriate, engaged

Speech: Within Normal Limits

Thoughts: Logical, Linear, Goal-Directed

Mood: Euthymic

Affect: Congruent

Insight: Intact

The Patient is a 32 year old male.

Visit for: Transcranial magnetic Stimulation for Depression (1100-1135).

Subjective

TMS session: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09 minutes.

Adjustments were made to accommodate comfort.

This session number #7 at 120% MT.

Objective

Next session was scheduled.

S/O Note Written by BLOBERG, BRIAN @ 10 Oct 2017 1133 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre Procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #7 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS: This is session #7 for depression with MT level at therapeutic treatment level for entire session.

Post procedure: SM monitored briefly. SM had no reports of distress associated with TMS.

PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Patient was seen today for education, planning and training in prep for participation in Recreational Therapy programs.

ACTION

Patient was educated on application, agenda, safety, and program expectations for participation in upcoming Recreational Therapy programs. SM's homework is to write goals for Recreational therapy and what programs he can use to best practice the skills he is developing/learning. Patient was receptive to education and motivated with TX. Patient is in agreement with plan.

Assessment: Alert and oriented x 4. Presents to be in a pleasant mood although displayed signs of anxiety as evidenced by excessive talking and having scattered thoughts. SM was not able to identify personal goals for post military and has homework to complete prior to next session. SM relates challenges back to his childhood and contradicts self with what does and does not matter to him. SM was educated on what the scope of practice is for Recreational Therapy and how writer is not able to change or help SM with certain areas of his life. During conversation SM requires redirection to answer questions. Learning style- Combined Patient tolerated session well.

Barriers to learning: none

Community Reintegration: Isolates self in his home, refuses to go to a gym because "it's dirty"

Leisure Barriers: social avoidance due to indifference towards others, IBS challenges

Pending Appointments: 11 Oct 2017

Leisure interests include: cooking, video games, movies, TV shows

Learning Style: combined

Precautions: pain

Interventions Recommended:

S/O Note Written by BRAGGS, DEBORAH C @ 05 Oct 2017 1242 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #5 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 5 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BAHROO, BHAGWAN A @ 05 Oct 2017 1301 EDT

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression (12:05-12:50).

Subjective

Attending Note: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 15/ #5 at 120% MT.

Objective

Next session was scheduled.

S/O Note Written by HANGEMANOLE, DESPINA C @ 04 Oct 2017 1324 EDT**History of present illness**

The Patient is a 32 year old male.

Focus Of Session: CBT/Work Stress

S) SM reported that he has been feeling bad the last two days due to some stress with his direct supervisor. SM stated that he feels angry but was able to identify feeling disrespected as the main reason for his anger. SM and this writer used CBT techniques to work through the beliefs and emotional consequences of the conflict at work. SM explored how he can use cognitive reframing and expectation adjustment to reduce the stress around this conflict. SM stated that he had forgotten to do his gratitude list for the last couple days until his family reminded him to do it and stated he was happy for the accountability. SM reported group went well and he attended one SMART recovery meeting last week which he enjoyed. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative and friendly. SM appears to be thinking critically about his recovery and is open to feedback. SM seems to be open minded to using concrete techniques to address his depression and anxiety and is reflective and thoughtful in session.

Alcohol Use D/O, Severe

P) SM will follow up with social worker in two weeks. SM will begin continue with ATS groups as scheduled.

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: CBT****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. Therapist and patient discussed recent events in his life. He identified positive changes he was attempting to make. Therapist worked with patient to identify small concrete steps toward these changes. Therapist reminded patient not to shift from extremes. For example, patient, typically rigid, expressed a desire to sell his house and have no attachments to anything. Therapist worked with patient on reasonable changes. Further conversation focused on patient's interactional style with people.

Response to treatment: ☐ None ☒ Some ☐ Significant ☐ Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

ASSESSMENT**Diagnosis:**

Axis I: Generalized Anxiety Disorder

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: () Not Elevated () Low **(X) Intermediate** () High

Harm to Others: **(X) Not Elevated** () Low () Intermediate () High

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 27 September 2017

Reviewed with patient on: 27 September 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would **NOT** like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

Military Specific Interventions:

1. The Command **WAS** directly notified of the current condition of the patient.

2. Pt **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.

Appointment Comments:

ctc

Note Written by RAGLAND, MARY @ 04 Oct 2017 1007 EDT**Process Group 0730-0845**

S: Topics discussed: Introductions, stressors which impacted drinking and/or recovery. Ct shared openly about his prior treatment experiences for alcohol, his recent relapse episode which led to this ATS referral. Ct shared very openly about negative childhood experiences related to being the child of divorced parents. Ct described recent trouble for "sexual harrassment" presented in a way as warning the other group members not to "post photos of yourself on social media" or "ask a civilian to speak outside of work". Ct related to another peer about SMART Recovey and they determined they lived near each other. Ct suggested they carpool to meetings.

O: Ct arrived on time for group SM alert and oriented x 3.

Appearance: Appropriate for weather /situation

Behavior: Appropriate, engaged

Speech: Within Normal Limits

Thoughts: Logical, Linear, Goal-Directed

Mood: Euthymic

Affect: Congruent

Insight: Intact

Judgment: Intact

SI/HI: None reported

Med/Pain Issues: None reported

A: Ct participated appropriately in discussion. Ct demonstrates commitment to sobriety/recovery.

P: Ct to continue with groups as assigned.

Reason for Appointment:Written by CHELLAPPA, MARY R @ 03 Oct 2017 1147 EDT
TMS**S/O Note** Written by BAHROO, BHAGWAN A @ 03 Oct 2017 1221 EDT**Reason for Visit**

Visit for: TransCranial Magnetic Stimulation for depression (12:05-12:50).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 13/ #3 at 120% MT.

Objective

Plan: SM next session scheduled.

S/O Note Written by BRAGGS,DEBORAH C @ 03 Oct 2017 1226 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information:

Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #3 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20:10 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 3 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

Comments: Allergic to cats**S/O Note** Written by KHRAMTSOV, ANDREI N. @ 12 Oct 2017 1254 EDT**Chief complaint**

The Chief Complaint is:

Difficulty staying asleep.

History of present illness

The Patient is a 32 year old male.

He reported: Military service in the Navy and currently on active duty.

Patient reports gasping, witnessed apnea, difficulty staying asleep, non refreshing sleep, hypersomnia, feeling tired, See paper note.

Past medical/surgical history**Diagnoses:**

No coronary artery disease

No congestive heart failure.

No hypertension

No pulmonary hypertension.

No diabetes mellitus.

Cerebral artery thrombosis - without cerebral infarction.

Depression Anxiety, Patient denies suicidal or homicidal ideation

Personal history

Behavioral: No caffeine use mild excessive and not a current smoker.

Alcohol: Alcohol use H/o EOH abuse.

Review of systems**Encounter Background Information:** Medication list reviewed.**Otolaryngeal:** No nasal passage blockage (stuffiness), no snoring, and snoring not exacerbated by nasal congestion.**Gastrointestinal:** Heartburn.**Genitourinary:** Nocturia.**Endocrine:** Decreased libido.**Musculoskeletal:** The legs do not feel restless.**Psychological:** Total Epworth Sleepiness score for likelihood of falling asleep during the day 19/24 Driving problems secondary EDS - yes and middle-night awakening with a choking sensation.

See paper note.

Physical findings**Vital Signs:**

° Current vital signs reviewed.

General Appearance:

° Awake. ° Alert. ° In no acute distress.

Neck:

Appearance: ° Neck circumference 38 cm.

Obstructions:

Obstructions: ° Airway was partially obstructed Mallampati class 2.

Lungs:

° Clear to auscultation is without wheezes, rales or ronchi.

Cardiovascular:

Heart Rate And Rhythm: ° Normal are normal, no murmurs, gallops or rubs appreciated.

Edema: ° Pretibial pitting edema not bilateral.

Neurological:

° Not oriented to time, place, and person. ° System: normal is grossly normal. Normal gait.

Objective

Assessment/Plan: The patient presents with some symptoms suggestive of Obstructive Sleep Apnea. y. Polysomnography/split has been ordered. Discussed with patient OSA, Insufficient Sleep Syndrome (ISS) and nasal congestion. The patient was counseled to maintain an ideal body weight to reduce the severity of the disease and related complications. The risks of alcohol and other sedatives were discussed. The patient was educated on positional therapy. The patient was counseled to avoid driving while excessively sleepy.(was stressed to patient with hypersomnia) !!!

SLEEP #1 RF0**Disposition** Written by KHRAMTSOV, ANDREI N @ 12 Oct 2017 1302 EDT**Released w/o Limitations****Follow up:** as needed in the SLEEP (PULM) CL BE clinic. - Comments: meds. recon/immun.add**Discussed:** Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -

Comments: Given the multidisciplinary variables that have been considered in the

evaluation and management of this patient's sleep complaints the medical

decision making is of moderate to high complexity. The diagnostic

procedures and therapeutic interventions are of high technical complexity

thereby the overall data complexity for this patient's evaluation is

moderate to high. At least 30 minutes were spent face to face with this

patient (10 minutes reviewing questionnaire and history, 5 minutes reviewing

medical record, 10 minutes educating and counseling on good sleep practices

and strategies and 5 minutes coordinating care). PATIENT COUNSELED NOT TO OPERATE MOTOR VEHICLES IF FEELING

TIRED.

Note Written by WILLIAMS, FELICIA P @ 02 Oct 2017 0928 EDT**Consult Order****Referring Provider:** TOBAR, EDEN**Date of Request:** 27 Jul 2017**Priority:** Routine**Provisional Diagnosis:**

R/o obstructive sleep apnea

Reason for Request:

32 y/o USN PO2 with chronic daytime fatigue despite adequate sleep time. Also intermittent headaches. Please evaluate for sleep disorder. Thank you.

A/P Written by BRIDGES, EDWARD E @ 29 Sep 2017 1153 EDT

1. Irritable bowel syndrome with diarrhea: 32M with history of IBS-D, now with more formed stools since starting Effexor 3 months ago but persistent abdominal cramping.

-Will retrial peppermint oil 200mg daily for his abdominal cramping, with concurrent 4 week trial of protonix 40 mg daily to offset heartburn risk. We may increase peppermint oil to twice daily if clinically effective and tolerated. The patient will also continue to avoid heartburn triggers, including fatty meals, ETOH, coffee, spicy foods, and late night meals.

-Regarding other spasmodics: (1) He has previously failed hyocymine, (2) He is a poor candidate for dicyclomine given its CNS effects, which may exacerbate his underlying psychiatric condition and pharmacotherapy

-Continue Effexor or transition to cymbalta per psychiatry

-Continue low fodmap diet, including no beer, no wine, no rum, no broccoli, no lettuce, no onions, no garlic, no beans, no spinach, no cabbage, no asparagus, no fruits, no sausage, no chorizo, no eggs, no polyols, and no dairy

-Additional recommendations to follow final anorectal manometry testing today.

(Added after encounter was signed.)**Walter Reed National Military Medical Center
Gastroenterology
Rectal Manometry Report**

Patient Name: Daniel Dennis Anderson SSN: [REDACTED] Date: 9/29/2017

Age: 32 Sex: Male Race: Caucasian Phone #: [REDACTED] Referring

Provider: Bridges, Edward

Reason for study: The patient is a 32 y/o active duty male, with a history of substance abuse, anxiety, and depression, referred for rectal manometry in evaluation of fecal urgency and rare fecal smearing. He also reports a history of IBS-D dating to childhood, with daily abdominal cramping that peaks prior to defecation and is relieved after bowel movements. Historically, he has experienced 1 large volume liquid brown stool (BSS#7) per day, however, his stools have become more formed (BSS#4) over the past 3 months since starting Effexor and continuing a low FODMAP diet. Unfortunately, there has been no concurrent resolution of his abdominal cramps, which continue to be triggered by physical activity, anxiety, and stress. Peppermint oil was previously trialed for his cramps but discontinued shortly after starting due to heartburn, which resolved with peppermint oil cessation. He reports 5 to 15 minute urgency before

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

defecating on every occasion and 2 episodes of trace fecal smearing in the setting diarrhea within the last year. He denies post stool leakage. His psychiatrist is currently considering transition to Cymbalta from Effexor.

CT A&P 2012 (evaluation of abdominal pain): Focal wall-thickening at the hepatic flexure with proximal stool retention.

Colonoscopy (McNally) in 2012: Mild congestion in the sigmoid but no masses or polyps; biopsies were unremarkable.

MRE 2012: Normal.

1. Physical Exam:

- a. **Appearance:** No internal/external hemorrhoids. Normal surrounding skin. No anal fissure.
- b. **Neurological exam:** Normal sensation to sharp/dull with cutaneous sphincter reflex not elicited.
- c. **DRE resting internal sphincter tone:** Normal
- d. **DRE pubo-rectalis sling:** Normal descent with paradoxical squeeze of external sphincter.
- e. **DRE external sphincter squeeze press:** Normal

2. Manometry findings:

- a. **Sensory threshold to rectal distention:** 15 ml (NL ≤ 20 ml)
- b. **Internal/External Resting Pressure (IAS):** 81 mmHg (NL = 59-74 mmHg)
- c. **External Sphincter Contractile Pressure (EAS):** 318 mmHg (NL > 100 mmHg)
- d. **Internal Sphincter relaxation with rectal distention:** Normal
- e. **Graduated relaxation:**

Bolus (ml)	Relaxation (mmHg)
15	10
20	18
30	34
40	33
50	54

3. Findings:

- Normal external sphincter squeeze pressure and normal descent of pubo-rectalis on DRE.
- Normal internal sphincter relaxation with balloon distension.
- Manometric evidence of elevated internal anal sphincter resting and normal external sphincter contractile pressure.
- Normal sensory threshold.
- Normal balloon expulsion test (able to expel 60mL water filled balloon within 60 seconds).

4. Impression:

- The patient's normal anorectal manometry is not consistent with a defacatory disorder.

5. Recommendations :

- Treat for IBS-D.
- Follow up with referring provider, Dr Bridges.

S/O Note Written by HANGEMANOLE, DESPINA C @ 29 Sep 2017 1133 EDT**History of present illness**

The Patient is a 32 year old male.

Focus Of Session: Treatment Planning

S) SM reported that he has been busy with appointments and will be finishing up with the VA this week. SM stated he had a sleep study on Monday and acknowledged he will be starting IOP process groups on Wednesday and then full IOP on 11 October. SM stated that he went to an AA meeting but walked out and spent time in his car trying to figure out why he had such a problem with AA. SM expressed that he felt the people in AA were of lower intelligence and didn't have much motivation to work on their problems behaviorally, though they verbalized a desire to change. SM stated he then went to a SMART recovery meeting and felt much more engaged there. SM stated he appreciates the CBT focus. SM was encouraged to keep an open mind about AA and he acknowledged there were many things about AA philosophy that he agreed with but that the meetings just didn't resonate with him. SM stated that he would need to be vigilant regarding the tendency to rationalize a return to drinking when he is "feeling better". SM stated that he feels he is working on the spiritual bankruptcy of addiction by connecting with his family and trying to connect more with friends. SM and this writer reviewed treatment planning goals. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed casually. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative and friendly. SM was insightful in developing his treatment plan. SM appears to be thinking critically about his recovery and is open to feedback.

Alcohol Use D/O, Severe

P) SM will follow up with social worker next week. SM will begin ATS groups on 4 October.

A/P Last Updated by HANGEMANOLE, DESPINA C @ 29 Sep 2017 0842 EDT**1. Alcohol dependence, uncomplicated**

Procedure(s): -Psychiatric Therapy Individual Approximately 60 Minutes x 1

Disposition Last Updated by HANGEMANOLE, DESPINA C @ 29 Sep 2017 0843 EDT**Released w/o Limitations**

Follow up: as needed in the ATS ADULT BE clinic. - Comments: SM will f/u with social worker next week.
 60 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

TMS

S/O Note Written by BAHROO, BHAGWAN A @ 28 Sep 2017 1333 EDT

Reason for Visit

Visit for: TransCranial Magnetic Stimulation for depression (12:05-12:50).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 11/ #1 at 120% MT.

Objective

Plan: SM next session scheduled.

Reason for Appointment: Written by CHELLAPPA, MARY R @ 27 Sep 2017 1144 EDT
TMSS/O Note Written by BRAGGS, DEBORAH C @ 27 Sep 2017 1216 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 80% up to 120%. TMS Treatment for depression session #1 at non therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total of stimulation time of 21.21 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 1 with MT level at non- therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with

Patient with access to weapons: No

Notes from current session:

Patient presents for follow-up appt. We last met three weeks ago, at which time we increased his Effexor xr to 225 mg po qam. Today pt states he doesn't think it has been helpful. He completed IOP last Thursday. He is going through the MEB process, getting his VA appts done. He is starting TMS with IOP today. He has a sleep study coming up. He was prescribed ramelteon during IOP which he didn't think was helpful. He has tried taking melatonin 10 mg OTC which is more helpful. He officially had his name changed and is working with his therapist on trying to figure out what he wants from here. He states he forgot to ask her about being referred to a sexual trauma group as he discusses a male cousin tried to force himself on pt when pt was age five but pt says he was able to get away. He describes another incident when he was older and at a sleepover at a friend's and the friend tried to force himself sexually on pt so pt fled. We discussed he should bring this up with his individual therapist before considering pursuing group therapy. He continues to take naltrexone but admits he did drink half a beer once. He is still in ATS and told them. He continues to have IBS symptoms and states GI suggested discussing switching his SNRI to Cymbalta with me. He denies suicidal thoughts.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembrukska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Created: 30 Oct 2017

[] Good coping/problem solving skills [x] Hopefulness present
 [] Faith/religion commitment [] Positive future orientation

Allergies: nkda**Medications:**

VENLAFAXINE HCL, 75 MG, CAP ER 24H, ORAL TAKE ONE CAPSULE WITH ONE 150 MG
 CAPSULE FOR A TOTAL OF 225 MG BY MOUTH EVERY MORNING 3 Ordered 06 Sep
 2017@0001

NALTREXONE HCL, 50 MG, TABLET, ORAL TAKE ONE TABLET BY MOUTH EVERY DAY 0 Refill
 VENLAFAXINE HCL, 150 MG, CAP ER 24H, ORAL TAKE ONE CAPSULE BY MOUTH EVERY
 DAY 0 Active 06 Sep 2017@0001

OMEGA-3/DHA/EPA/FISH OIL, 1000 MG, CAPSULE, ORAL TAKE 2 BY MOUTH EVERY DAY 2 Active
 Chlorhexidine Gluconate 0.12%, Solution, Oral RINSE BY MOUTH ONE TIME PER DAY FOR 14
 DAYS. 0 Active 09 Aug 2017@0001

SIMETHICONE, 80 MG, TAB CHEW, ORAL CHEW 1 TABLET BY MOUTH FOUR TIMES A DAY
 AS NEEDED FOR GAS 2 Active 18 May 2017@0001

Psyllium Seed 3.4 g/Scoop + Sucrose Granules, Oral TAKE ONE SCOOP EVERY DAY MIXED
 IN LIQUID. AFTER TWO WEEKS INCREASE TO TWICE EVERY DAY 3 Active 10 May
 2017@0001

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin
 Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and
 Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol
 and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost
 custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine
 per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were
 divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt
 states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive
 to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

'uncle's son" when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Learns best by: Pictures. Learning is adversely affected by: None.

Patient would not like family members involved in care.

Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in casual clothing.

Behavior/Orientation: Polite, and cooperative.

Abnormal Movements:normal gait. No abnormal movements apparent.

Rapport:fair

Speech:talkative

Mood:stable

Affect:full

Thought Process: circumstantial

Thought Content: denies current suicidal intent/HI/AVH

Judgment: fair

Insight:fair

Impulsivity: none at time of interview

Cognition:grossly intact

Fund of Knowledge:wnl

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will continue medication

Intervention: since pt is not finding Effexor helpful, agreed to cross taper of Effexor to Cymbalta as

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

follows:

Week 1: Decrease Effexor XR from 225 mg to 150 mg every day.

Week 2: Decrease Effexor XR from 150 mg to 75 mg every day.

Week 3: Stop taking Effexor XR 75 mg. In its place, start Cymbalta 60 mg daily.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will abstain from drinking

Objective: pt will refrain from alcohol use

Intervention: continue naltrexone 50 mg po daily. Normal b12 panel drawn after July 2017 visit.

Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of medication plan with patient who stated understanding and agreement with plan.

Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Follow-up: three weeks

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

FOLLOW-UP NOTEPatient Name: Daniel Anderson (previously Merwin)
Patient last 4: 0538
Appt #: Intake + 13
Therapy time: 60 minutes
E&M time: 60 minutes**Identifying Data:** 32-year-old, Single, Caucasian, Male**Military Data:**Branch: USN
Rank: PO1
MOS: CTN
TIS: 11-years
Deployments: N/A
Deployment Related: N/A N/A
Trauma: N/A
WTU: N/A
MEB in progress: N/A
AdmSep in progress: N/A
Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: Treatment Planning****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. Patient was last seen 14 August 2017. Patient recently completed IOP. He stated that he learned a lot of new tools from IOP and had things he knew refreshed. Patient is hopeful about the future and the potential options he has about paths. Patient relayed his ideas to the therapist. Therapist encouraged patient to work on breaking down larger goals into small concrete goals. This includes personal well-being and mental health. Patient will be referred to OT and Rec Therapy to work on coping and increasing life functioning. Therapist and patient discussed next steps in MEB. He is almost complete with VA appointments. Therapist and patient discussed patient's schedule and appointment load.

Response to treatment: ☐ None ☒ Some ☐ Significant ☐ Marked**Mental Status Exam:**

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: (X) Outpatient () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 27 September 2017

Reviewed with patient on: 27 September 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would NOT like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

IOP Discharge

Appointment Comments:

bsd

S/O Note Written by DELSESTO, BARBARA SUE @ 26 Sep 2017 1127 EDT**Reason for Visit**

Visit for: Case Management. Patient came in to meet with CM about his plan ahead after discharge from IOP. He will see Dr. Paul 27 Sep at 1000 and Dr Tobar at 1100. He interested in an occupational therapy consult for more group activity and support dogs information. We discussed his duty assignment and a possible PCS LIMDU. CM to contact Command about a possible reassignment and a fresh start after the IOP.

History of present illness

The Patient is a 32 year old male.

He reported: Military service Profile Type: LIMDU permanent

MEB status: Patient has been assigned to a PEBLO and has started his VA appointments.

Not thinking about suicide. Patient reports no S.I/H.I or any safety issues. CM information provided to him for any further questions or issues.

CM to work on a plan of care to include his Commander's input for a new duty assignment. SM seems hopeful about his future plans to include going back to school and voc rehab upon transition from the NAVY.

S/O Note Written by DONKIN, LAURA G @ 22 Sep 2017 1122 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Social Work Discharge Summary

Admission Date: 29 August, 2017

Discharge Date: 22 September, 2017

While at Psychiatry Continuity Services (PCS), in the Intensive Outpatient Program (IOP) and the Comprehensive Recovery Program (CRP), patient PO2, has been involved in psycho-educational groups and individual therapy. He was compliant with his medication management. He also has been receiving TMS treatments for anxiety, and may continue with TMS to treat his depression post discharge.

PO2 will return to duty at Ft Meade, but will attend medical/mental health appointments most days. SM is to start the IOP at Addictions Treatment Service (ATS) on Monday. This program is 3 days per week. SM will also return to the care of Dr. Paul and Dr. Tobar, both at WRNMMC Outpatient Behavioral Health. PO2 has made progress in his treatment and reports a reduction in anxiety. In his future mental health treatment, he would like to move forward from processing his childhood trauma and accept who he is. PO2 has also focused on learning about his personality traits and how to form meaningful relationships. No SI/HI plan or intent present.

S/O Note Written by POURZAND, MIRIAM @ 25 Sep 2017 1320 EDT

Chief complaint

The Chief Complaint is: Met with SM for 30 minutes for discharge meeting.

History of present illness

The Patient is a 32 year old male.

He reported: Feeling tired (fatigue).

Sleep disturbances.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

almost 12 years TIS, HDS: Ft. Meade, MOS: Network Intelligence, referred to PCS by outpatient provider at WRNMMC d/t continued symptoms of anxiety and depression. SM reports he has not worked in one month, has lost access to the building, and was demoted from E6 to E5 in 7/2017 d/t social media sexual harassment sent to a female co-worker. SM reports having anxiety symptoms as far back as childhood d/t his father. In 2008, SM started picking his scalp (neurotic excoriation) while deployed aboard a ship d/t stress and anxiety. SM also developed MRSA. SM reports in 2010 he had a bad 2 year relationship breakup with a woman whom was an alcoholic and taking medication. SM states in 2012 he started seeing behavioral health d/t having suicidal ideation, being discontent with life, and the bad breakup. SM endorses guilt, decreased appetite and fear of gaining weight and losing 10 lbs. in the last month (stating he does not want to look like his father as well as end up with diabetes as he has), states feels as though he has sleep paralysis and at times sleeps too much but other times difficulty falling and staying asleep, +anxiety and worrying, reports being hypersexual stating he could have intercourse daily as well as ejaculate three times a day, +anger/irritability, +isolation, states does not like sun exposure, fantasizes about life-space things, watches television a lot which in turn creates increased anxiety (example: watches Game of Thrones and Walking dead but does not look at it as just a TV show, fantasizes that it is real). SM states he works on computer gaming and enjoys cooking. Reports he was in debt for \$35,000 but sold one of his homes and now debt has decreased to \$19,000. States his debt was from buying his brother a car and giving his family money.

Personal history**PAST MEDICAL HISTORY**

IBS; PRK; tonsillectomy; childhood asthma; neurotic excoriation (scalp picking);

PSYCHIATRIC HISTORY

Suicide attempt as a child by taking bottle of aspirin d/t conflict with father, vomited but no treatment; age 17 suicide attempt via consuming large quantity of alcohol, no treatment; 6/16/2014 Integrated Health WRNMMC x 2 visits d/t anxiety; 8/2014-10/2014 WRNMMC outpatient BH d/t anxiety; 4/2015-11/2015 WRNMMC outpatient BH d/t depression/anxiety, also attended CBTI group; 8/2016 Integrative Health WRNMMC d/t mood swings/anxiety x 1 visit; 9/2016 started seeing outpatient BH WRNMMC d/t mood swings/anxiety. MEDICATIONS HAVE BEEN RECONCILED to include current medications, OTC, and supplements. Previously trialed meds: Zoloft (increased fatigue), melatonin, lexapro (felt flat), Unisom, Wellbutrin XL (increased anxiety), and Lunesta (ineffective). SM currently taking: Effexor 225 mg daily and Naltrexone 50 mg daily, Rozerem 8 mg qhs.

SOCIAL / DEVELOPMENTAL / SPIRITUAL HISTORY

Pt is 32 year single Caucasian male with almost 12 yrs TIS, Navy E-5 (recently demoted from E-6), MOS cyber security. Pt reports that he was born in California to very young, unmarried parents, who later married and then divorced. Pt reports that he has 2 sisters, who are ages 30 and 29. He also has a half brother, and half sister who he does not have contact with. Pt reports that father had custody for most of childhood, and mother had to pay support. Both parents were physically abusive. Father was on welfare and frequently negligent of his parental duties. Pt states that father's excessive discipline was to make them fearful. Pt reports 2 incidents of sexual trauma from unwanted contact. Once by older cousin and another time in middle school with friend grabbing him. Pt was moved numerous times during childhood. Pt said that there were times when he was living in a ghetto due to father living off welfare and spending all their money. Pt appears to currently have emotional support from mother and sisters. He has a very contentious relationship with father, thus recently changing his name. Pt said that he barely passed high school, and had a 2.2 GPA. He attributes this to his struggle with IBS, excessive running schedule and not doing homework. He joined the Navy immediately following high school. He has difficulty with relationships and is not currently in one. He denies religious affiliation.

Family history**FAMILY PSYCHIATRIC, SUBSTANCE USE AND MEDICAL HISTORY**

Mother is diagnosed with Bipolar disorder. Younger sister also diagnosed with Bipolar disorder. Youngest sister diagnosed with depression. Both sisters have had multiple suicide attempts. Maternal grandmother also Bipolar.

Review of systems

Head: No headache.

Gastrointestinal: No constipation.

Musculoskeletal: No localized joint pain, no localized joint swelling, and no limb pain.

Neurological: No dizziness, no motor disturbances, and no gait abnormality. No sensory disturbances.

Psychological: No social isolation.

Physical findings**General Appearance:**

* Alert. * Well developed. * Well nourished. * In no acute distress.

Neurological:

* No disorientation was observed - oriented to place, person, time, and situation. * No hallucinations. * Memory was unimpaired - recent and remote memories are intact. * Judgement was not impaired.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Speech: ° Normal - Regular rate, rhythm, tone, volume; non-pressured.

Psychiatric:

Demonstrated Behavior: ° No decreased eye-to-eye contact was observed.

Attitude: ° Cooperative.

Mood: ° Euthymic.

Affect: ° Normal . Full range, stable, appropriate to situation, normal intensity, congruent with mood.

Thought Processes: ° Not impaired - they were linear, logical, and goal directed. ° Attention demonstrated no abnormalities.

Thought Content: ° Insight was intact. ° No delusions. ° No suicidal ideation. ° No suicidal plans. ° No suicidal intent. ° No homicidal ideations. ° No homicidal plans. ° No homicidal intent.

Plan**TREATMENT GOALS AND OBJECTIVES****Patients goals**

1. Figure out how to cope with prior life events- partially met
2. Move on from things- partially met

Treatment objectives

1. Improve psychological functioning-partially met
2. Decrease number of episodes of trichotillomania- partially met reports for 2 days
3. Reduction in symptoms as evidence by self reported measures BHDP by 20% post completion of program -unmet

DISCHARGE TREATMENT PLAN AND STRATEGY

Medication: Effexor 225 mg daily, naltrexone 50 mg daily, Rozerem 8mg qhs

Psychotherapy: continue in out pt

Referrals: watch pad sleep study-completed, Alpha-Stim-completed, TMS treatment for anxiety completed reports not effective, TMS for depression treatment to start, SM completed extensive psychological testing

Estimated Frequency and Duration of Treatment: sm requires continued BHC

Other:

- [x] Treatment Options and Education: Diagnosis and treatment options - including risks, benefits, side effects, and choice to decline treatment, were discussed with the patient who expressed an understanding of the diagnosis and plan.
- [x] Treatment plan was collaboratively discussed with the patient.
- [x] Yes [] No...Patient agrees with plan? If not, what part?

DATE: 9/22/17

Notes**RISK LEVEL**

I assessed warning signs, risk factors, and protective factors. After considering these factors in the context of this patient's clinical presentation, I consider this patient to be a:

- [] High Acute Risk for Suicide
- [] Intermediate Acute Risk Suicide
- [] Low Acute Risk for Suicide
- [X] No Elevated Acute Risk Suicide

[X] Patient is not considered to be a risk of harm toward others.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s):
 -Clinical Social Work Individual Outpatient Counseling 30 Minutes x 1
 -Psych Ther Indiv Approx 30 Min W/ Medical Evaluation & Management x 1

TMS

S/O Note Written by BRAGGS, DEBORAH C @ 22 Sep 2017 1257 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session #9 and #7 at therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 29.04 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 9 and # 7 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and after discussion with the team, it was decided today will be SM last appointment for anxiety and SM will begin treatment for depression on return to clinic Wednesday September 27. Next session scheduled for Wednesday. ZUNG anxiety=50, GAD 7=15.

S/O Note Written by BAHROO, BHAGWAN A @ 22 Sep 2017 1332 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:00-12:40).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins.

Adjustments were made to accommodate comfort.

This session number 9 was the # 7 session at 120% MT.

Objective

Next session scheduled.

IOP

S/O Note Written by EARLEY, KERRIE GLYN @ 22 Sep 2017 1004 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Mindfulness (0800-0850) Facilitated by Kerrie Earley, LCSW

Purpose: Educate in the practice of Mindfulness, including the rationale for incorporating this as a practice into daily life as a means of improving effectiveness in using other skills and managing difficult situations. Living with awareness in the present moment (neither ruminating on the past, nor worrying about the future), focusing on one thing at a time in a non-judgmental way and doing what works are some of the core concepts of Mindfulness practice that will be repeated and encouraged throughout the course of treatment.

Today patients discussed what mindfulness is and what it is not- emphasizing the role of practice, its use in understanding emotions and improving memory, how it can be used in different situations, etc. Group members discussed emotion/rational/wise minds to consider how to navigate awareness of thoughts without pushing away emotions. Group then practiced mindfulness activities and discussed their ability to participate in the activities as well as implications for improving daily life.

This patient arrived late in the session, but actively tried each exercise and engaged in discussion about how effective it was in the moment. He was thoughtful about how the skills play out in certain areas of his life.

There was no indication of S/I or H/I present. Next mindfulness group scheduled for 29 September.

S/O Note Written by CLOPPER, TAMMY J @ 22 Sep 2017 1050 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: IOP Guest Speaker Group 0900-0950: Facilitator: Chaplain Edwards, Dr. Gragnani, and Ms. Buford, RN

PURPOSE: The purpose of this group is to have guest speakers bring various topics that would be relevant to group members and their treatment/recovery. Group topics range from finance experts, VA experts, Chaplain, and Med Board experts.

TOPIC: Today, Chaplain Clifton Edwards from the Pastoral Care Department discussed what is Spirituality, what it should be, what is your spirituality/what makes you come alive, then had an open forum discussion. Group members discussed what they consider to be their connection to the spiritual world or what motivates them.

PARTICIPATION: SM attended group, was attentive to facilitator, and participated in group discussion. No evidence of S/I/HI. Next group 29Sept2017.

The Patient is a 32 year old male.

He reported: Encounter Background Information: Social Work Discharge Summary

Admission Date: 29 August, 2017

Discharge Date: 22 September, 2017

While at Psychiatry Continuity Services (PCS), in the Intensive Outpatient Program (IOP) and the Comprehensive Recovery Program (CRP), patient PO2, has been involved in psycho-educational groups and individual therapy. He was compliant with his medication management. He also has been receiving TMS treatments for anxiety, and may continue with TMS to treat his depression post discharge.

PO2 will return to duty at Ft Meade, but will attend medical/mental health appointments most days. SM is to start the IOP at Addictions Treatment Service (ATS) on

Monday. This program is 3 days per week. SM will also return to the care of Dr. Paul and Dr. Tobar, both at WRNMMC Outpatient Behavioral Health. PO2 has made progress in his treatment and reports a reduction in anxiety. In his future mental health treatment, he would like to move forward from processing his childhood trauma and accept who he is. PO2 has also focused on learning about his personality traits and how to form meaningful relationships. No SI/HI plan or intent present.

who is helpful in their recovery and how to get others to help. This SM actively contributed to group discussion. No SI/HI plan or intent present. The next group will be on 28 September, 2017.

S/O Note Written by GHOLSON,GEORICA K @ 21 Sep 2017 1440 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: COMMUNICATION SKILLS 1330-1430.

FACILITATORS: Dr. Georica Gholson, psychologist and Mrs. Delacie Gardiner, psychiatric technician

Purpose of communication skills group is to explore and discuss components of communication among co-workers, peers, family, and friends, and to use effective communication strategies to enhance and improve relationships.

Intervention: Discuss and identify passive, passive aggressive, aggressive, and assertive communication strategies. Discuss impact of each communication style on the listener and when each communication style is appropriate. Group discussed how emotions affect behaviors related to the various communication styles. SM participated in group. SM was able to identify characteristics of all three communication styles. Additionally, he identified his style as passive and discussed how feedback from others has impacted how he communicates with other people.

No indication of SI/HI.

Next group scheduled for October 5, 2017.

A/P Last updated by GHOLSON,GEORICA K @ 21 Sep 2017 1441 EDT

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s): -Psychiatric Therapy Group Interview x 1

Reason for Appointment: Written by CHELLAPPA, MARY R @ 21 Sep 2017 0754 EDT
TMS

S/O Note Written by BRAGGS, DEBORAH C. @ 21 Sep 2017 1229 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session #8 and #6 at therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 28.52 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 8 and # 6 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and after discussion with the team, it was decided that tomorrow will be service member last TMS appointment as SM has medical appointments next week which will keep him from coming in for treatments. Next session scheduled for tomorrow.

S/O Note Written by BAHROO, BHAGWAN A @ 21 Sep 2017 1407 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:00-12:40).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins.

Adjustments were made to accommodate comfort.

This session number 8 was the # 6 session at 120% MT.

Objective

Next session scheduled.

S/O Note Written by MILLER,PENNY E @ 21 Sep 2017 1248 EDT**Reason for Visit**

Visit for: (0915-1050) - Intensive Outpatient Program-"Improv Workshop" (Staff: Penny Miller, recreation therapist, Helen Lowenstein, social worker and Lisa Banks-Williams, advanced practice nurse) -

Objective: To provide an opportunity for creativity, self-expression and socialization through verbal and non-verbal improv activities.

Activity: This workshop was facilitated by Amelia Baine, a special guest, comedian and Seema Reza, WRNMMC hospital recreational arts coordinator. Patients were introduced to the activity of improv, used during this session as the intervention for this session. This session patients learned strategies to and were encouraged to take an active role. Patients were provided with directives in order to participate in several activities. Participation in the provided activities facilitated team work, socialization and an opportunity for enjoyment. A safe supportive environment was provided offering patients a structured experience for exploration and a chance to step out of their comfort zones. This writer served as activity coordinator as well as an emotional support, facilitating the group end of activity processing component.

Participation: This patient willingly participated during the session. He disclosed that he is typically shy and serious, however today he did something out of his comfort zone. He reported that he enjoyed his improv experience and is motivated to participate in the future. Pt was supportive of others and interacted well with staff and peers. A total of 11 patients attended this group. The next creative writing session is scheduled for Thursday September 28, 2017.

This note was written by Penny Miller, recreation therapist.

S/O Note Written by VANFOSSEN, MALLORY B @ 20 Sep 2017 1526 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Art Therapy (1230-1400) Facilitated by Mallory Van Fossen ATR-BC, LCPAT, Art Therapist; and Maggie Hardy, LCSW-C, Social Worker. This session provided pts with the opportunity to visually process thoughts, emotions and therapeutic concepts, and to utilize art making as a means of grounding. This session also allowed pts to explore the cycle of an intense emotional experience. Pts were lead in a discussion the wave skill from DBT that describes the means of experiencing emotion, according the symbol of a wave in the sea. Pts were then asked to render their own emotional wave using art media, to show us the experience of an evolving emotional state. 2D materials were used, consisting of pastels, chalks, and various types of paint on large paper. Pts were given 60 minutes to independently work. Discussion followed, in order to process any issues or content that may have been prompted by artmaking. Topics consisted of: how we can use the art process to understand the wave skill, how the process of art making can engage us to feel emotions as we create them visually, how this process of feeling emotion in real time can be channeled into a "safe" action, such as art making, rather than acting on them through other means, and how the depiction of the wave can be described objectively (or separately from self) to further our understanding of emotional experiences, rather than naming and discussing individual feelings. There was no indication of SI/HI. Next art therapy session will be held Thursday 21 September, 2017.

A/P Last updated by POURZAND, MIRIAM @ 22 Sep 2017 0906 EDT

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management. Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s): -Clinical Social Work Individual Outpatient Counseling 30 Minutes x 2 ADDITIONAL PROVIDER(S): SMITH, JESSICA ANN

Disposition Written by POURZAND, MIRIAM @ 22 Sep 2017 0906 EDT**Released w/o Limitations**

Follow up: 1 day(s) in the PSYCH DAY HOSP BE clinic or sooner if there are problems. - Comments: The patient agrees to seek treatment at or call the NMMC Emergency Room (301) 295-4810/11 should there be a significant worsening in symptoms, intense distress, or thoughts about harming self or others.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. 120 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

LEARNING/NEEDS ASSESSMENT:

Patient would like the following information at this appointment: none

PLAN (P):

Patient was educated about and stated understanding of the diagnosis and treatment options.

Patient collaborated on and agreed to the following treatment plan:

High Interest Case? No

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☒ CBC ☒ LFTs ☒ TSH ☒ Chem 8 ☐ Lipids

☒ Fasting Glucose ☒ HCG ☒ UDS ☒ Vit B12 ☐ _____

Safety Plan:

Patient is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Medication:

Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Patient reports taking medications as prescribed: Yes/No

Patient reports following changes in medication:

MED	SIG	Target Dose	Target Symptoms
Effexor XR	225 mg daily	, for depression and anxiety treatment	
Rozerem	8 mg qhs	for sleep	
Naltrexone	50 mg daily-	prevent ETOH cravings	

Other Interventions (Social, Occupational, Case Management): recreation therapy referral entered 9/13/17

Prognosis:

☐ Excellent ☐ Good ☐ Fair ☒ Guarded ☐ Poor

S/O Note Written by BRAGGS, DEBORAH C @ 20 Sep 2017 1227 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session #7 and #5 at therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 29.04 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 7 and # 5 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BAHROO, BHAGWAN A @ 20 Sep 2017 1409 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:00-12:40).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no

physiologic sensing devices, no metallic facial or neck tattoos

SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30,

AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins.

Adjustments were made to accommodate comfort.

This session number 7 was the # 5 session at 120% MT.

Objective

Next session scheduled.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: IOP Group: Sensible Thinking: 0900-0950: Group facilitators: Dr. Gholson, Ph.D. Co-facilitators: Finis Taylor, MD, Alex Yilmaz, MS4, and Chelsea Schifferle, MS3. Purpose: To provide psycho education on cognitive behavioral therapy and application. Facilitate discussion on how thoughts influence behavior and helpful/unhelpful thinking patterns. Today patients explored the relation between activating events, beliefs and consequences and how they can dispute their beliefs and adopt effective new beliefs. Intervention: Discussion of the ABCDE model and addressing distressing events in their lives. Group members focused on the ABC portion of the ABCDEF model. Patients discussed a distressing situation, emotions from the situation and the beliefs and thoughts associated with the emotion. Patients also discussed the origin of these thoughts and beliefs. Participation: Patient was attentive throughout psycho education and participated in group discussion. SM was open in discussing a distressing situation related to his military experience. He discussed how his beliefs and automatic thoughts were changed due to life experiences and maturity. He also expressed how challenging it can be to reflect on his emotions and alter his automatic thoughts.

No evidence of SI/II. Next group session is 27 September 2017.

S/O Note Written by DONKIN, LAURA G @ 20 Sep 2017 1037 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Positive Psychology Group 0800-0900 facilitated by Laura Donkin, LCSW and Dr. Deutsch. The purpose of the group is to assist patients in viewing themselves and their situations based on their strengths, rather than weaknesses or symptoms, with the aim of helping them flourish and live a fulfilling life. Today's group was focused on reviewing the factors identified by Dr. Martin Seligman, which are present in people who describe themselves as happy. The discussion was focused on Engagement. There were 2 hand-outs. One hand-out introduced Dr. Seligman's ideas. Another identified the 10 qualifiers of FLOW by Mihaly Csikszentmihalyi. SM actively contributed to group discussion. The next group will be held @ 0800 on 27 July. No SI/II plan or intent present.

S/O Note Written by BRIDGES, EDWARD E @ 19 Sep 2017 1549 EDT**History of present illness**

The Patient is a 32 year old male.

32 y/o AD male returns to the GI clinic for f/u regarding IBS manifested by chronic intermittent abdominal pain. He reports a long history of GI symptoms, dating back to childhood, but symptoms have been more disruptive over the past few years. Notes generalized sharp, crampy abdominal pain about every 1-2 days, that peaks prior to defecation and is relieved after bowel movements. Typically has 1-2 soft or liquid stools per day, infrequently with urgency. Abdominal pain is worse with intake of insoluble fibers, although, this regimen does resolves his liquid stools producing semi formed stools. Also worse during physical activity and with increased anxiety/stress. He has seen nutrition, adopted a low fodmap diet (no beer, no wine, no rum, no broccoli, no lettuce, no onions, no garlic, no beans, no spinach, no cabbage, no asparagus, no fruits, no sausage, no chorizo, no eggs), and found partial relief in frequency of pain and fecal urgency. He also reports similar relief in symptom frequency with avoiding dairy, caffeine, and sugar-substitutes. He reports reduced stool output with decreased oral intake. He previously tested for celiac serologies and inflammatory markers. Denies EIM's of IBD, as well family h/o IBD. Reports fecal staining twice in the setting diarrhea. Reports 5-15 minute urgency before defecating on every occasion. Denies post defecatory leakage.

Of note, patient underwent CT A&P in 2012 for the same abdominal pain, which showed focal wall-thickening at the hepatic flexure with proximal stool retention. Colonoscopy (McNally) in 2012 showed mild congestion in the sigmoid, but biopsies were unremarkable. A subsequent MRE was completely normal.

He was also previously noted to have a +serum AB to H.pylori. He was treated with triple therapy, and a stool test confirmed eradication in 2016.

Reason for Appointment: Written by CHELLAPPA, MARY R @ 19 Sep 2017 1154 EDT
TMS

S/O Note Written by BAHROO, BHAGWAN A @ 19 Sep 2017 1230 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:00-12:40).

Subjective

A procedural time out was done during which settings and patient was re-identified. Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location. Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate. Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0. Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins. Adjustments were made to accommodate comfort. This session number 6 was the # 4 session at 120% MT.

Objective

Next session scheduled.

S/O Note Written by BRAGGS, DEBORAH C @ 19 Sep 2017 1232 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session 6 and #4 at therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 29.05 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 6 and # 4 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Intensive Anger Management Group 1230-1330. 19 September, 2017.
Facilitators: Laura Donkin, LCSW-C and Ms. Gardiner.
Purpose: The purpose of this group is to help people understand the effect that anger has on their lives. Members will be taught techniques to reduce their anger and learn alternate ways of expressing their thoughts and feelings in a safe and supportive environment. This will be achieved by encouraging them to learn ways to identify the triggers and precipitants that lead to anger and frustration.
Topic: "What's Your Style?" Members explored where they learned their styles of anger, the consequences, the personal physical effects, and how others are affected by this style of anger. We also explored various styles of expressing anger. Most members participated in the exercise. This SM actively contributed to group discussion. The next group will be held on Tuesday, 26 August @ 1230. No indications of suicidal/homicidal ideation, plan or intent.

The Patient is a 32 year old male.

He reported: Encounter Background Information: (1330-1420) Comprehensive Recovery Program- Emotional Regulation- Crisis Management-

Facilitators: Penny Miller, recreation therapist and Georica Gholson, PhD, psychologist. PURPOSE: The purpose of this group is for patients to discuss a crisis or situation they have experienced and have an opportunity to discuss their experience in a safe supportive environment. This group

focuses on strategies patients can implement in their lives to develop, utilize and maintain social supports. ACTIVITY: Today's group focused on "Who Can You Tell Your Narrative to?" to provide increased awareness about one's social supports and using their supports before, during and after a crisis. The group discussed individuals they felt comfortable talking with and people they do not feel comfortable discussing their issues with. Various perspectives were explored in addition to strengths and challenges for each patient. Each group member was provided with a worksheet to develop a plan to assess who is in their support network.

PARTICIPATION: Patient actively participated in the discussion. No evidence of suicidal ideation, homicidal ideation, plan or intent noted. Next session is scheduled for

Tuesday 8/29/17.

Focus Of Session: Scheduling

S) SM reported that he continues to have IBS issues. SM and this writer discussed upcoming schedule and SM went over scheduled VA appointments. SM agreed to begin ATS IOP process groups on 4 October and full IOP on 13 October. SM stated he was doing well and had no concerns to discuss. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate. New appointment summary sheet reviewed and signed.

A) SM was cooperative and friendly. SM appears to have significant mental health issues that are being addressed through PCS and BH. SM would benefit from engaging in community recovery.

Alcohol Use D/O, Severe

P) SM will follow up with social worker next week. SM will work on treatment planning goals as homework. SM will begin ATS groups on 4 October.

A/P Written by HANGEMANOLE, DESPINA C @ 19 Sep 2017 1409 EDT**1. Alcohol dependence, uncomplicated**

Procedure(s): -Psychiatric Therapy Individual Approximately 60 Minutes x 1

Disposition Written by HANGEMANOLE, DESPINA C @ 19 Sep 2017 1410 EDT**Released w/o Limitations**

Follow up: as needed in the ATS ADULT BE clinic. - Comments: SM will f/u with social worker next week. 60 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Signed By HANGEMANOLE, DESPINA C (LCSW-C, MAC, Addiction Treatment Services) @ 19 Sep 2017 1412

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: MORNING GROUP THERAPY SUMMARY NOTE 0730-1100: HCPCS CODE S9480:

INTENSIVE OUTPATIENT PROGRAM (IOP)-PSYCHIATRIC SERVICES: This HCPCS code issued per MHS and MEDCOM IOP guidance to capture RVU credit for all group therapy services provided in the morning. The first half of this daily IOP program is comprised of a full morning program from 0730 to 1130.

S/O Note Written by FRIEDLANDER, JOSHUA N. @ 19 Sep 2017 1056 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Group Therapy Distress Tolerance Skills 1000-1050: Instructed group in how to identify moments of distress, how to build up motivation to improve their coping skills in those moments, and how to develop coping skills to better tolerate those moments. Handouts provided. Pt participated actively. No evidence of SI/HI.

S/O Note Written by HARDY, MARGARET L @ 19 Sep 2017 1059 EDT

History of present illness

The Patient is a 32 year old male.

Creative Writing group (0900 - 1000) Facilitated by Margaret Hardy, LCSW-C, and Seema Reza, Creative Writer. This group is co-led by two providers to address the high acuity of the group members and to have a staff member available should a group member become triggered in the group. This also allows for the other staff member to monitor behaviors and participation attentively.

PURPOSE: Introduce patients to writing as a means for self-expression, stress relief, and to increase engagement with treatment. The relationship between writing and healing is evidence-based. Research supports that writing combines the objective (what happened) with the subjective (how you felt about it). Writing helps Patients gain insight and process trauma, life events, and gain understanding of their feelings and behavior. Further, research supports that writing for 20 minutes on a consistent basis results in positive effects on white blood cell counts, reduces sick visits, and reduces blood pressures.

TOPIC: In today's group of 10 patients, MS Reza explained the purpose and benefit of writing including biological and emotional to include learning to use words rather than actions as well as areas for further exploration in mental health therapy. Then MS Reza

read Wild Geese, by Mary Oliver followed by group discussed of which lines stood out for them followed by reading of 'Permission Granted', by David Allen Sullivan. Writing prompt was to write from the first few words of each stanza.

PARTICIPATION: Patient participated fully in group. Provider observed no evidence of SI/HI.

FOLLOW-UP: Next Creative Writing Group is scheduled for Thursday, 21 SEP 2017 at 0900 hours. Next IOP group is Distress Tolerance at 1000 hours today.

S/O Note Written by DONKIN, LAURA G @ 19 Sep 2017 1207 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Individual Note. SW met with SM for individual 1:1 session from 0805-0850. SM presented in positive mood and stated that he had slept well the previous night. We discussed pending discharge on Thursday and SM said that he has outpatient behavioral health appointments scheduled but needs to schedule ATS appointments. SM expressed anxiety about managing multiple appointments and work schedule and seemed especially concerned about all the driving this would entail. We then discussed his current relationships with 2 different women and what he hopes to gain from these relationships. We explored his schizoid traits and his emotional needs. On the one hand he enjoys spending time with women, but then wants no expectations and greatly values his alone time. We also explored what triggered the escalation in his anxiety level, which he now connects with his deployment on a ship for basically 3 years off the coast of Japan. SM had very little privacy or shore leave. SM feels that the military component of his work is especially difficult given his personality traits. We will meet again on Thursday for discharge. No SI/HI plan or intent present.

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

PURPOSE: Provide Education on Therapy Interfering Behaviors for TRP patients. To understand how certain behaviors can cause interference with progress.
 TOPIC: Therapy Interfering Behaviors. Hand out had 5 blocks to fill out How did the problem develop, Triggers for the recent episode, the problem, things that kept problem going, and positive things that I've got going for me. This was tied into having patients share what their interfering behaviors have been and what if any are they having now.

PARTICIPATION: SM was an active participant at times throughout the group. SM shared his anger can get in the way of seeking help and the stigma. No evidence of S/I or H/I. Next group to meet 10/02/17 at 1330.

The A/P section was last updated by DONKIN, LAURA G @ 18 Sep 2017 1447 EDT - see above. Previous Version of A/P section was entered/updated by LOWENSTEIN, HELEN @ 18 Sep 2017 1435 EDT.

1. **Generalized anxiety disorder:** 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s):

-Psychiatric Therapy Group Interview x 2 ADDITIONAL PROVIDER(S): GHOLSON, GEORICA K; LOWENSTEIN, HELEN T

TMS

S/O Note Written by BAHROO, BHAGWAN A @ 18 Sep 2017 1210 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:00-12:40).

Subjective

A procedural time out was done during which settings and patient was re-identified. Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location. Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate. Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0. Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins. Adjustments were made to accommodate comfort. This session number 5 was the # 3 session at 120% MT.

Objective

Next session scheduled.

S/O Note Written by BRAGGS, DEBORAH C @ 18 Sep 2017 1234 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session #5 and #3 at therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 29.05 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 5 and # 3 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

IOP

S/O Note Written by HARDY, MARGARET L @ 18 Sep 2017 0936 EDT

History of present illness

The Patient is a 32 year old male.

Seeking Safety: (Safety) 0800-0850

Facilitators: This group was co-led by Margaret Hardy, LCSW-C and Penny Miller, CTRS, LCSW-C

This writer co-facilitated Seeking Safety Group in order to provide clinical support, contribute to discussion by offering therapeutic feedback, and provide additional resources in order to assist service members manage stressors and prevent crisis situations.

CHECK-IN - mood today was indifferent. Patient's stated the following about this weekend: good coping was, pretended to like myself and cooking for others; no unsafe behavior; commitment was met - cooked for others. Community resource update was to talk with his Social Worker about Command expectation of work while in the IOP Program. Patient's takeaway was - I need to work on boundaries, saying no and no sharing too much information with everybody.

PARTICIPATION: Patient participated fully. There was no indication of SI/HI.

FOLLOW-UP: Next Seeking Safety Group will be Monday, 25 SEPT 2017. The next group today is Common Concerns at 0900 hours. Please see Penny Miller's note of today for additional information.

Therapy

Intervention This Appointment - Group Therapy - Provider normalized ongoing suicidal ideation which began in childhood with recognition that patient knows what to do when things worsen for him, and has sought help.

Reason for Visit

Visit for: (0800-0850); IOP Program- Seeking Safety Group: Facilitated by this writer Penny Miller, recreation therapist and Margaret Hardy, social worker.

Purpose: Seeking Safety is a psychoeducational group developed for individuals with co-occurring disorders PTSD and Substance Abuse Disorders based on five central ideas (1) safety as the priority of this first-stage-treatment (2) integrated treatment of PTSD and substance abuse (3) a focus on ideals (4) four content areas: cognitive, behavioral, interpersonal, and case management and (5) attention to the therapist processes.

Activity: "Safety", the topic introduced today is described as the first stage of healing from both PTSD and substance abuse, and the foremost guiding principle throughout this treatment. This session the group reviewed samples of unsafe coping verses safe coping, stages of morning, signs of recovery as well as a list of over 80 safe coping skills were provided. A discussion around the topic was facilitated, providing participants with an opportunity to share their personal experiences.

Participation: Pt was attentive and willingly contributed to the group process. Pt disclosed feelings of guilt and resentment regarding issues of neglect he'd experienced from his father, whom was his primary caretaker as a child. He is reading journals provided to him by his mother, and as a result is still coping with the emotional pain. He also disclosed that he feels that he does not have any boundaries and as a result never set boundaries in past relationships. He stated that he notices that when he does not set boundaries in relationships he ends up regretted not doing so. He was encouraged to meet with his individual therapist to further develop in that area. Next Seeking Safety group is scheduled for Monday 25 September 2017 at 0800. No evidence of SI/HI plan or intent noted.

S/O Note Written by GWIN, KRISTIN MICHELLE @ 18 Sep 2017 0959 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information:

IOP Common Concerns Group: "Effective Communication" 0900-0950

Facilitator: Kristin Gwin, LCSW-C and Delacie Gardiner

PURPOSE: The purpose of this group is for group members to process role of their symptoms and the impact they may or may not have within the following areas: Marriage and/or Relationship Problems, Parenting Difficulties, Family Function, Social Function. These general areas bring up group discussions centering on the following areas: Fear and Worry, Depression, Family Roles, and Family Dynamics. Discussion also are had on how Family, Financial Difficulties, Avoidance, and Isolation can have an impact on the symptoms that the group members may be experiencing and how that can be communicated to those they are close to. Skills that are reviewed include Effective Communication, Communication Styles, Identifying Family Roles, Coping Skills, and Setting Appropriate Boundaries.

TOPIC: Today, the group topic was the Communication Traps". Group members reviewed 10 of the most common communication traps to include Generalizing, Preaching, Mindreading, Dwelling on the Past, Stomping Out, and Labeling. Group members discussed how they and other around them fall into this trap, and how to negotiate communication in a more effective way by being aware of the traps they most commonly fall into.

PARTICIPATION: Sm had no evidence of homicidal/suicidal ideation. SM was quiet in group however appeared to be actively listening to the group content. Next group is scheduled for 09/25/17.

A/P Last updated by DONKIN, LAURA G @ 18 Sep 2017 1445 EDT

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s): -INTENSIVE OUTPATIENT PSYCHIATRIC SERVICES, PER DIEM x 1
 -Clinical Social Work Individual Outpatient Counseling 30 Minutes x 2

Disposition Written by POURZAND, MIRIAM @ 19 Sep 2017 1055 EDT**Released w/o Limitations**

Follow up: 1 day(s) in the PSYCH DAY HOSP BE clinic or sooner if there are problems. - Comments: The patient agrees to seek treatment at or call the NMMC Emergency Room (301) 295-4810/11 should there be a significant worsening in symptoms, intense distress, or thoughts about harming self or others.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. 120 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Reason for Appointment: Written by CHELLAPPA, MARY R @ 15 Sep 2017 1149 EDT
TMS

S/O Note Written by BAHROO, BHAGWAN A @ 15 Sep 2017 1240 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:15-13:00).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins.

Adjustments were made to accommodate comfort.

This session number 4 was the # 2 session at 120% MT.

Objective

Next session scheduled

S/O Note Written by BRAGGS, DEBORAH C @ 15 Sep 2017 1251 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session #4 and #2 at therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 29.04 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 4 and # 2 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for Monday. ZUNG anxiety=54, GAD 7=18.

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Art Therapy (1230-1350) Staff present: Mallory Van Fossen, ATR-BC, LCPAT, Art Therapist, Dr. Gragnani, Psychologist. Pt attended CRP Art Therapy group. This session provided the patient with opportunity to practice creativity and utilize a new outlet for expression, while focusing on art making as a therapeutic practice. This SM was actively engaged in the activity, openly answered questions, and shared with the group. SM was also able to speak to the art making process and how this informed chosen imagery, as well as the insights that were gained. There was no indication of SI/HI.

S/O Note Written by VANFOSSEN, MALLORY B @ 15 Sep 2017 1546 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Art Therapy (1230-1400) Facilitated by Mallory Van Fossen ATR-BC, LCPAT, Art Therapist, Dr Gragnani, Clinical Psychologist. This session provided pts with the opportunity to visually process thoughts, emotions and therapeutic concepts, and to utilize art making as a means of grounding. Pts were encouraged to consider topics or lingering thoughts that they may have been introduced to in other groups, images that may have been triggered lately, or using the art to process or explore concepts that they may feel the need to further investigate. Pts were instructed to focus on the topics that may be difficult to express in words. Materials consisted of pastels, pencils, markers, crayons, chalks, acrylic paints, and various sculptural 3D materials. Pts were given 60 minutes to independently work. Discussion followed, in order to process any issues or content that may have been prompted by artmaking. Topics consisted of coping skills required to focus and allow self to express material visually, persevering through frustration and uncertainty, creating meaning from the process and materials in a way that words alone cannot, the purpose and inclination of self-judgment and criticism related to art making and other activities. There was no indication of SI/HI. Next art therapy session will be held Monday 18 September, 2017.

The A/P section was last updated by GRAGNANI, CYNTHIA T @ 15 Sep 2017 1508 EDT - see above. Previous Version of A/P section was entered/updated by POURZAND, MIRIAM @ 15 Sep 2017 1207 EDT.

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Reason for Appointment:Written by CHELLAPPA,MARY R @ 15 Sep 2017 0744 EDT
IOPS/O Note Written by EARLEY,KERRIE GLYN @ 15 Sep 2017 1045 EDTHistory of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Core Mindfulness Skills: 0800-0850- Facilitated by Kerrie Earley, LCSW

Purpose: Patients will be provided with information regarding the practice of Mindfulness, including the rationale for incorporating this as a practice into daily life. Mindfulness functions as a foundation for being in "Wise Mind"-a state of mind where individuals are more able to engage in skillful behavior and regulate emotions more effectively. Living with awareness in the present moment (neither ruminating on in the past, nor worrying about the future), focusing on one thing at a time in a non-judgmental way and doing what works are some of the core concepts of Mindfulness practice.

Today patients discussed concepts of selective attention, multitasking, and focus in the context of mindfulness. Group members watched two videos and discussed the role of mindfulness in day to day life and in using coping. One group member started speaking at length about a recent accident and his reactions. SW asked follow up questions and redirected him to the topic as he was using graphic and violent language, and patient became upset and declined to finish the story. He left the group and other group members presented as anxious and frustration. SW and patients discussed use of mindfulness to understand their emotions and reactions, their coping skills, and their options for moving forward. Group members provided feedback on the group and ideas for future session. This patient was actively engaged throughout the session. He discussed memories of his father having been brought up in the group and noted recent focus on mindful communication with others in his life.

There was no indication of S/I or H/I present. Next Core Mindfulness Skills group is scheduled for 22 August, 2017.

S/O Note Written by GWIN,KRISTIN MICHELLE @ 15 Sep 2017 1100 EDTHistory of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information:

IOP Guest Speaker Group 0900-1000:

Facilitator: Brian Pampino, Kristin Gwin, LCSW-C , Tammy Buford, RN

PURPOSE: The purpose of this group is to have guest speakers bring various topics that would be relevant to group members and their treatment/recover. Group topics range from finance experts, VA experts, Chaplin, and Med Board experts.

TOPIC: Today, Mr. Pampino from Fleet and Family Services/Financial Department discussed the Eight Steps to Financial Fitness. He engaged the group to discuss budget planning, retirement planning, the cash flow formula, and spending. Group members engaged actively in discussing how to set themselves up for financial fitness and what needs to be considered to do so.

PARTICIPATION: . SM was actively involved in listening to the presentation of the guest speaker and taking notes, and well as asked clarifying questions to better understand the material. SM had no evidence of homicidal/suicidal ideation. SM actively participated. Next group is scheduled for 09-22-17.

S/O Note Written by DONKIN, LAURA G @ 15 Sep 2017 1303 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Individual Note. SW met with SM for individual 1:1 session from 1000-1050. SM presented in positive mood and was talkative and smiling throughout session. SM started off session weighing his options for future jobs. He admitted to having many options and considers this a positive. He spent a considerable amount of time discussing his issues with male/female relationships and comparing the 2 women he is currently seeing. SM admits that he needs work on verbal communication and how to be mindful of his word choices. We also discussed what he is hoping to gain from relationships and explored his needs in regards to relationships. SM admitted to having a hard time with male relationships and usually gravitates towards females. SM considered that this may have to do with his experiences being bullied as an adolescent. We discussed his psychiatric diagnosis and the treatment team's decision not to change it. He seemed to accept this without a problem. SM is still contending with his IBS symptoms and shared his frustration. He will work on word mindfulness this weekend. We will meet on Tuesday. No SI/HI plan or intent present.

The Patient is a 32 year old male.

He reported: Encounter Background Information: 1145 Check in to afternoon program. SM denied SI/HI. Will attend groups this afternoon.

S/O Note Written by DONKIN, LAURA G @ 14 Sep 2017 1406 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Life Skills Group

1230-1330. Facilitator: Laura Donkin, LCSW-C. This CRP group addresses behaviors which promote a healthy and independent life style. Topics include: strategies for time management, building a support network, resilience, and relapse prevention. Today's topic was, "11 Warning Signs of Depression and Relapse." Group members shared their individual warning signs and explored how they should react. This SM actively participated in group discussion. No SI/HI plan or intent present. The next group will be on 22 September.

S/O Note Written by GHOLSON, GEORICA K @ 14 Sep 2017 1442 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: COMMUNICATION SKILLS 1330-1420

FACILITATORS: Dr. Georica Gholson, psychologist and Mrs. Delacie Gardiner, psychiatric technician

Purpose: Purpose of communication skills group is to explore and discuss components of communication among co-workers, peers, family, and friends, and to use effective communication strategies to enhance and improve relationships.

Intervention: Group members were given a handout that discussed 3 different responses to criticism - passive, aggressive, and assertive. Group members learned the differences between the types and discussed which ones they engage in when encountering criticism. Also, group members discussed how the expressed feedback to other people. Lastly, group members discussed how the messenger and delivery style of the message impacts how they receive feedback and criticism.

Participation: SM participated in group discussion.

Assessment: No indication of distress. No indication of SI/HI

Plan: Next group scheduled for Thursday 21 September 2017.

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: 1430 Check out of PCS for the day. SM denied SI/HI. 1200 TMS tomorrow - will report for groups in morning.

A/P Last updated by DEUTSCH, ANNE MARIE @ 14 Sep 2017 1542 EDT

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management. Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s):
-Psychiatric Therapy Individual Approximately 30 Minutes x 2
-Psychiatric Therapy Group Interview x 1

Disposition Written by POURZAND, MIRIAM @ 15 Sep 2017 0754 EDT**Released w/o Limitations**

Follow up: 1 day(s) in the PSYCH DAY HOSP BE clinic or sooner if there are problems. - Comments: The patient agrees to seek treatment at or call the NMMC Emergency Room (301) 295-4810/11 should there be a significant worsening in symptoms, intense distress, or thoughts about harming self or others.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. 120 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

TMS

S/O Note Written by BAHROO, BHAGWAN A @ 14 Sep 2017 1227 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:15-13:00).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins.

Adjustments were made to accommodate comfort.

This session number 3 was the first session at 120% MT.

S/O Note Written by BRAGGS, DEBORAH C @ 14 Sep 2017 1236 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress.

Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session #3 and #1 at therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 29.45 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 3 and # 1 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

The Patient is a 32 year old male.

He reported: Encounter Background Information: 0800 Check in to PCS Team A. SM denied SI/HI. No appts scheduled today.

S/O Note Written by GHOLSON, GEORICA K @ 14 Sep 2017 1013 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Interpersonal Effectiveness (0800-0850) Georica Gholson, PhD and Narce Pratt, LCSW-C

Purpose: Patients will examine their patterns of relating to others. Patients will begin to explore how to interrupt unhelpful patterns and foster healthy patterns of relating. Patients will be challenged to find a balance between passivity (as well as passive-aggressive behavior) and aggression. Patients will rehearse ways to effectively ask for what they want, keep relationships they want or need to keep and maintain their self-respect. Developing and maintaining a level of healthy interpersonal boundaries will also be addressed.

Today group began with introductions and recognition of one way they have helped or been helped by others this week. All patients participated. Patients were introduced to the idea of identifying the goal of their interactions- getting what they want/need, keeping the relationship, or maintaining self-respect. Group members considered ways of approaching difficult conversations and were introduced to the DEAR-MAN skills, emphasizing the importance of asking or asserting rather than hinting, and being aware of one's approach. Group members discussed the idea of how or when this is used as manipulation. Group members discussed approaches to the skill and the idea that sometimes people are not will or able to give them what they want or need. This patient was actively engaged in the discussion.

There was no indication of S/I or H/I present. Next interpersonal effectiveness group is scheduled for 21 September 2017.

S/O Note Written by HARDY, MARGARET L @ 14 Sep 2017 1057 EDT**History of present illness**

The Patient is a 32 year old male.

Creative Writing group (0900 - 1000) Facilitated by Margaret Hardy, LCSW-C, and Seema Reza, Creative Writer. This group is co-
led by two providers to address the high acuity of the group members and to have a staff member available should a group member
become triggered in the group. This also allows for the other staff member to monitor behaviors and participation attentively.

PURPOSE: Introduce patients to writing as a means for self-expression, self-care, stress relief, and to increase engagement with
treatment. The relationship between writing and healing is evidence-based. Research supports that writing combines the objective
(what happened) with the subjective (how you felt about it). Writing helps Patients gain insight and process trauma, life events, and
gain understanding of their feelings and behavior. Further, research supports that writing for 20 minutes on a consistent basis
results in positive effects on white blood cell counts, reduces sick visits, and reduces blood pressures.

TOPIC: Ms Reza read - What Secrets We Keep (pg 10-11) by Shinji Moon from his book, The Anatomy of Being (2012). Group
participates wrote for 7 minutes from prompt, For so many years I've held words beneath my tongue like ... The second poem by
the same author was Kintsugi (pg 13). Prompt: We were never taught ... Final poem was Joy by Seema Reza from her book,
When the World Breaks Open.

PARTICIPATION: Patient participated fully. Provider observed no evidence of SI/Hi during group.

FOLLOW-UP: Next Creative Writing Group is scheduled for Thursday, 21 SEP 2017 at 0900 hours. Next IOP group is Recreation
Therapy at 1000 hours today.

S/O Note Written by PRATT, NARCEDALIA @ 14 Sep 2017 1114 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Interpersonal Effectiveness (0800-0850) Narcedalia Pratt, LCSW-C and Dr.
Gholson, Ph.D.

Purpose: Patients will examine their patterns of relating to others. Patients will begin to explore how to interrupt unhelpful
patterns and foster healthy patterns of relating. Patients will be challenged to find a balance between passivity (as well as passive-
aggressive behavior) and aggression. Patients will rehearse ways to effectively ask for what they want, keep relationships they want
or need to keep and maintain their self-respect. Developing and maintaining a level of healthy interpersonal boundaries will also be
addressed.

Topic: Today group focused on DEAR-MAN skill for getting what one wants/needs in a relationship. This writer served as co-
facilitator of this group, checking on reactions of individual members, following up with members who showed distress or confusion,
and checking for safety with members who leave the room.

Participation: SM was actively engaged in the group discussion.

There was no indication of SI/ or H/I present. Next interpersonal effectiveness group is scheduled for 21 September 2017.

S/O Note Written by LOWENSTEIN, HELEN T @ 14 Sep 2017 1233 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information:

(1000-1050) - Recreation Therapy- "This group was facilitated by Penny Miller, recreation therapist and Helen
Lowenstein, social worker LCSW.

Purpose: To provide an opportunity for healthy communication, problem-solving, encourage teamwork and compromise.

TOPIC: Ice breaker/group activity. Hand out provided that asked patients to identify other group members to Find Someone
Who. There were 20 questions asked such as have you lived in another country, have you lived in the barracks and so forth.
Patients were asked to talk with others they normally don't talk with. This allowed patients to work together and experience team
work, utilize communication skills, and movement.

Participation: PT was an active participant throughout the group. No evidence of SI/ or H/I. Next session is scheduled for
9/21/17, 1000.

S/O Note Written by DEUTSCH, ANNE MARIE @ 14 Sep 2017 1251 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: 1100 Check out of morning program. SM denied SI/Hi. Will return for
afternoon groups.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Daniel Anderson
13 SEPT 2017
Follow-Up Data Only
Psychological testing - Reviewed and interpreted psychological tests from BHDP. These are only one source of data and should be interpreted in the context of the patient's entire presentation. The BHDP scales are reported and briefly interpreted as follows.

Behavioral Health Vitals (patient reported):
Overall health reported as: Good
Pain Level (0-10): 0 Currently treated: N/A
Suicidal Ideation Risk - C-SSRS score: 3 Past/Prep Behavior last 3 months: No
past attempts as of 09/06/2016: 3
Most recent Suicidal Ideation: Within the past week
Suicidal Ideation Duration: Fleeting - a few seconds or minutes
Suicidal Ideation Frequency: Once a week
Protective Elements Stopping Suicidal Actions: Family, Fear of failing
Harm Others Risk over next week as of 9/13/2017 - None Active Plan: N/A
Patient with access to weapons: No
Recent Outcome Measures (last 30 days)
BASIS24 - Score: 2.63 - High levels of general distress reported (9/13/2017)
PHQ9 - Score: 21 - Severe depressive symptoms reported. Evaluation indicated. (9/13/2017)
GAD7 - Score: 20 - Severe anxiety symptoms reported. Evaluation indicated. (9/13/2017)
PCL-5 - Score: 61 - Significant PTSD symptoms reported (9/13/2017)
PCL-C: N/A
AUDIT - Score: 20 - Probable Alcohol Dependence, consider treatment/ASAP referral (8/29/2017)

Psychiatric Exam:

Thought Content: ? Homicidal Ideations () Yes (x) No Suicidal Ideation () Yes (x) No.

S/O Note Written by EARLEY, KERRIE GLYN @ 14 Sep 2017 0635 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Service Dog Training Group 1230-1405 -Facilitated by Kerrie Earley, LCSW;
SPC Santiago, behavioral health tech Co-Led by Jen Blessing service dog trainer

Purpose: This group's intent is to provide a therapeutic opportunity for active hands on involvement in process training dogs in the service dog training program. The group reviews the concept of mindfulness and provides an experiential opportunity to incorporate skills into daily life. In attempt to bridge the gap between information and application, this group provides a practical exercise to apply coping skills in action within a safe supportive environment.

Group members review concepts of mindfulness practice and considered how those skills may be useful with service dog training as well as in other areas of their lives. Patients were asked to be mindful about their own moods, reactions, and behaviors in addition to the dogs. Patients were guided through training exercises, and were given time to pet the dogs and ask questions. Participation: This patient was very motivated and engaged. He reported a strong connection with dogs and had working knowledge of training. He noted the possibility that it is something he wants to pursue further.

Next opportunity for art, recreational, and off-unit activities will occur next Wednesday. Service Dog Training group is held twice monthly. No suicidal, homicidal, plan or intent present.

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s): -Psychiatric Therapy Group Interview x 1
-Clinical Social Work Individual Outpatient Counseling 30 Minutes x 2 ADDITIONAL PROVIDER(S):

Note Written by HANGEMANOLE, DESPINA C @ 13 Sep 2017 1227 EDT**Focus Of Session: Recent Cravings**

S) SM reported that he has been having less frequent IBS episodes but reported that when they do happen they are more intense. SM stated that he has been doing the gratitude list as a family text and while sometimes it's difficult to find things to be grateful for it is forcing dialogue with his family. SM reported he's been less successful with his "to do list" goals, but agreed to step back from trying to accomplish one goal a day and try to accomplish 2-3 goals per week instead. SM stated he went to one meetings in the last 3 weeks and found it "ok". SM agreed to continue going to one meeting per week. SM reported he is not sure if PCS is helpful and is not learning many new skills but is finding some self discovery through group discussion. SM reported he has two weeks of groups left and then he will continue getting TMS through PCS for another 2 weeks. SM stated he's been having more cravings and shared that his BH provider may switch him from Naltrexone to Campral. SM stated he's been getting through the cravings by eating and sleeping. He stated his anxiety is also increasing and was able to identify some of the reasons this may be happening. SM reported he had a preliminary sleep study which resulted in a consult to the sleep clinic. SM reported he is hopeful that if his sleep improves his anxiety, cravings and concentration issues may also improve. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative and friendly. SM appears to have significant mental health issues that are being addressed through PCS and BH. SM would benefit from engaging in community recovery. Alcohol Use D/O, Severe

P) Case will be reviewed with treatment team. SM will follow up with social worker next week. SM will work on treatment planning goals as homework.

TMS

S/O Note Written by BRAGGS, DEBORAH C @ 13 Sep 2017 1236 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for anxiety session #2 at none therapeutic level; administered using settings of 1500 pulses given at 1 pulses per second, with 26 second stimulation times, in 4 second intervals for a total of stimulation time of 29.50 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 2 with MT level at non-therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BAHROO, BHAGWAN A @ 13 Sep 2017 1341 EDT

Reason for Visit

Visit for: Transcranial magnetic stimulation for Anxiety (12:15-13:00).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins.

Adjustments were made to accommodate comfort.

This session number 2 started at 95% and ended with 120% MT.

Objective

Next session was scheduled.

IOP

S/O Note Written by HART, DANIEL C @ 13 Sep 2017 1111 EDT

History of present illness

The Patient is a 32 year old male.

Core Beliefs

IOP Group: Sensible Thinking: 0900-0950: Group facilitators: Dr. Gholson, Ph.D. Co-facilitators: Dan Hart, M.D., J.T. Cederberg, D.O., and Sam Woodle, MS4

Purpose: To provide psycho education on cognitive behavioral therapy and application. Facilitate discussion on how thoughts influence behavior and helpful/unhelpful thinking patterns. Today patients explored understanding and identifying core beliefs. Patients also discussed how core beliefs are related to their automatic thoughts and emotional experiences. Intervention: Discussion of maladaptive and adaptive core beliefs and how to support/challenge them. Participation: Patient initially stated that he was "indifferent" at the outset of the group but later was attentive throughout psycho education and participated in group discussion - he volunteered to share his core belief and the rest of his worksheet. No evidence of SI/HL. Next group session is ABCDE Model.

Thought Content: ? Homicidal ideations () Yes (x) No Suicidal Ideation () Yes (x) No.

S/O Note Written by SMITH,JESSICA ANN @ 13 Sep 2017 1325 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: INTENSIVE OUTPATIENT PROGRAM (IOP)-PSYCHIATRIC SERVICES: This HCPCS code issued per MHS and MEDCOM IOP guidance to capture RVU credit for all group therapy services provided in the morning. The first half of this daily IOP program is comprised of a full morning program from 0730 to 1130.

S/O Note Written by GHOLSON,GEORICA K @ 13 Sep 2017 1346 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: IOP Group: Sensible Thinking: 0900-0950: Group facilitators: Dr. Gholson, Ph.D. Co-facilitators: Dan Hart, M.D., J.T. Cederberg, D.O., and Sam Woodlee, MS4

Purpose: To provide psycho education on cognitive behavioral therapy and application. Facilitate discussion on how thoughts influence behavior and helpful/unhelpful thinking patterns. Today patients explored understanding and identifying core beliefs. Patients also discussed how core beliefs are related to their automatic thoughts and emotional experiences. Intervention: Discussion of maladaptive and adaptive core beliefs and how to support/challenge them. Participation: Patient was attentive throughout psycho education and participated in group discussion. No evidence of SI/Hi. Next group session is 20 September 2017.

S/O Note Written by POURZAND,MIRIAM @ 13 Sep 2017 1418 EDT**History of present illness**

The Patient is a 32 year old male.

<<Note accomplished in the TSWF BH Spec AIM form>>

SUBJECTIVE /NOTE

0945-1010 met with SM for follow up. Sm reports anxiety and depression remains aware Effexor recently increased from 150 to 225 mg daily. Also aware recently started TMS so TMS and effexor should be beneficial in sx reduction but will take some time. Sm reports sleep problems taking melatonin in the past and somewhat effective. Rozorem 8 mg qhs ordered reviewed administration and potential side effects. Sm aware to take medication on an empty stomach. Also discussed discharge planning referral entered for rec therapy as adjunct treatment. Also gave sm list of discharge appts as sm has end date of 9/21/17 will present only for TMS.

FOLLOW UP PLANS

end of the week

.....

.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Physical findings**General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° No disorientation was observed - oriented to place, person, time, and situation. ° No hallucinations. ° Memory was unimpaired - recent and remote memories are intact. ° Judgement was not impaired.

Speech: ° Normal - Regular rate, rhythm, tone, volume; non-pressured.

Psychiatric:

Demonstrated Behavior: ° No decreased eye-to-eye contact was observed.

Attitude: ° Cooperative.

Mood: ° Euthymic.

Affect: ° Normal. Full range, stable, appropriate to situation, normal intensity, congruent with mood.

Thought Processes: ° Not impaired - they were linear, logical, and goal directed. ° Attention demonstrated no abnormalities.

Thought Content: ° Insight was intact. ° No delusions. ° No suicidal ideation. ° No suicidal plans. ° No suicidal intent. ° No homicidal ideations. ° No homicidal plans. ° No homicidal intent.

S/O Note Written by DEUTSCH, ANNE MARIE @ 13 Sep 2017 1626 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: 0800-0850: Positive Psychology group, co-facilitated by Dr. Deutsch, psychologist and SPC Santiago, psychiatric technician. This group is designed to help members learn ways to increase well-being, meaning, and joy in their lives using research-based methods of positive psychology. The model used is that developed by Martin Seligman, using the PERMA acronym: positive emotion, engagement, relationships, meaning and accomplishment. Today's group was a discussion of positive emotion. Members discussed "what constitutes a good life?", then identified positive emotions which come from each of our senses. This SM. There was no evidence of SI/HI. Released without limitations to attend 0900 group. Next Positive Psychology group will meet in one week.

TMS

S/O Note Written by GHURANI, SAWSAN @ 12 Sep 2017 1324 EDT

History of present illness

The Patient is a 32 year old male.
A procedural time out was done during which settings and patient was re-identified.
60 minutes.
Purpose of visit was for the initial session of Transcranial Magnetic Stimulation to determine level and location.
Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.
Patient arrived for TMS anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos
SM was a bit less anxious as procedure unfolded. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0
Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 16 second intervals for a total stimulation time of 22.04 mins.
Adjustments were made to accommodate comfort.
This session number 1 ended with 95% MT.

S/O Note Written by BRAGGS, DEBORAH C @ 12 Sep 2017 1349 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed. Up/Down 7.5, Side/Side 1, LLC 1.0, MT .94, SOA 30, AP 10.7, Coil +10.
Procedure: MT 80% up to 95%. TMS Treatment for depression session #1 at non therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 22.04 minutes. A procedural time out was done during which settings and patient was re-identified.
PROGRESS IN MEETING GOALS:
This is session # 1 with MT level at non-therapeutic treatment level for entire session.
Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: MORNING GROUP THERAPY SUMMARY NOTE 0730-1100: HCPCS CODE S9480:
INTENSIVE OUTPATIENT PROGRAM (IOP)-PSYCHIATRIC SERVICES: This HCPCS code issued per MHS and MEDCOM IOP guidance to capture RVU credit for all group therapy services provided in the morning. The first half of this daily IOP program is comprised of a full morning program from 0730 to 1130.

S/O Note Written by DONKIN, LAURA G @ 12 Sep 2017 1117 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Individual Note. SW met with SM for individual 1:1 session from 0900-1000. SM presented in positive mood. SM started off discussing his future career, as he has been pondering this. He feels that his current job with NSA in IT has been very stressful and wonders whether the financial benefit is worth the anxiety. SM said that he loves to cook and wonders if that can be turned into a career. This SW pointed out that a career in computers does not necessarily mean that it will be stressful and that SM is very talented in this field. SM replied that this is true and will give this some more thought. SM said that he will be starting VA medical appointments in about a week for his medical board. We explored the current state of his anxiety and depression. SM is to start TMS treatments for anxiety today at noon. SM said that he has learned some new things about himself while in groups and gave some examples. He mentioned that he talked with estranged sister last Friday and told her that he would like to meet with her and talk about his sexual molestation of her when they were adolescents. SM reported that sister said that she is open to discussion and moving forward. SM is to think about what he would like to focus on in therapy for his final week at PCS. We will meet again on Friday. No SI/Hi plan or intent present.

S/O Note Written by LOWENSTEIN, HELEN T @ 12 Sep 2017 1210 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information:
Distress Tolerance Group, (1000-1050). Facilitated by Ms. Helen Lowenstein, LCSW and SPC Santiago. Purpose: To teach patients skills to identify potential distressing events and to teach them to manage negative emotions/negative experiences without exacerbation of a perceived crisis. Patients will also be encouraged to become aware of ways they escape severe emotional pain through destructive behaviors and/or relationships. Time will also be spent helping patients learn to tolerate the distress.
Topic: Self soothing skills ways to incorporate old and new coping patterns for healthier outcomes. First hand out provided

was Self Soothing Comforting yourself through the five senses and it listed the five as Touch, Hear, See, Taste, & Smell. The 2nd hand out provided was the Road to a Life Worth Living. One side of the pyramid was the problems, and things to decrease, the other side DBT skills and increase. These hand outs sparked lively discussions on ways to incorporate and adopt healthy coping skills in distressing situations.

PARTICIPATION: Pt was an quiet throughout most of the group, however, shared he uses coffee as his go to coping skill because of the taste and smell and food at times especially love of pizza helps him when in distress to calm down. No evidence of SI/HI. Next group to meet 09/19/17 at 1000.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: EXPLORATION OF STIGMA @1230-1320
Facilitators: Georica Gholson, PhD, psychologist and Tammy Buford, psychiatric clinical nurse.
PURPOSE: The purpose of this group is to help patients gain an understanding about mental health stigma. Additionally, the group discusses mental health stigma within the military, their family and friends and in other settings. Also, the group learns about myths and facts related to mental health disorders.
TOPIC: Group discussion centered on internalized mental health stigma. Group members took a quiz to determine the degree of the own internalized mental health stigma. Group discussed thoughts and beliefs they held about their diagnosis as well as ideas that they disagreed with.
PARTICIPATION: SM arrived late to group due to a previous appointment. However, he was actively engaged and offered insightful commentary and suggestions to other group members. Also, SM shared a video on depression with the group that he said helped him explain his mental illness to those around him. No evidence of SI/II. Next group session is 25 September 2017.

S/O Note Written by DONKIN, LAURA G @ 11 Sep 2017 1032 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: MORNING GROUP THERAPY SUMMARY NOTE 0730-1100: HCPCS CODE S9480:
INTENSIVE OUTPATIENT PROGRAM (IOP)-PSYCHIATRIC SERVICES: This HCPCS code issued per MHS and MEDCOM IOP guidance to capture RVU credit for all group therapy services provided in the morning. The first half of this daily IOP program is comprised of a full morning program from 0730 to 1130.

S/O Note Written by LOWENSTEIN, HELEN T @ 11 Sep 2017 1033 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: COMMON CONCERNS GROUP - "0900-0950" Facilitators: This group was co-led by Ms. Lowenstein, LCSW and Ms. Delacie Gardiner.
PURPOSE: The purpose of this group is to allow group members to identify and process common emotional states and how to cope with states using various CPT/DBT techniques. Group members will discuss topics such as anxiety, depression, insomnia, grief, anger, etc, and connect with each other on an emotional level with other group members. This group consists of all three IOP tracks: IRP, CRP, TRP.
TOPIC: Conflict Resolution Tips. Patients were provided a hand out with 12 conflict resolution tips. Each tip was identified and explained in the hand out. Patients were asked to discuss the steps and how they can adopt healthier skills with conflict. This opened up a lively discussion on different ways to handle conflict resolution in a more constructive way.
PARTICIPATION: This group is co-led by two providers to address the high acuity of the group members and to have a staff member available should a group member become triggered in the group. This also allows for the other staff member to monitor behaviors and participation attentively. SM was quiet throughout the group. SM appeared to be listening as evidenced by head nodding, and direct eye contact. No evidence of S/I or H/I. Next group scheduled for 09/18/17 at 0900.

S/O Note Written by CLOPPER, TAMMY J @ 11 Sep 2017 1057 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Seeking Safety Group: "Taking Good Care of Yourself" 0800-0850
Facilitators: Dr. Gragnani and Tammy Buford, RN.
PURPOSE: The purpose of this group is based on five central ideas (1) safety as the priority of this first-stage-treatment (2) integrated treatment of PTSD and substance abuse (3) a focus on ideals (4) four content areas: cognitive, behavioral, interpersonal, and case management and (5) attention to the therapist processes.

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

TOPIC: This group focused on "Taking Good Care of Yourself" in which patients were asked to evaluate whether they are taking good care of themselves. Patients filled out the questionnaire and discussed their answers.

PARTICIPATION: SM attended group, was attentive to facilitators and participated in group discussion. SM reports feeling grumpy d/t being late this morning from 3 car accidents on the way to programming. States his weekend was ok, stating he went to a friend's house and watched a movie and had dinner. States on Sunday he had to go to the VA for an appointment then went on a date. States he also talked to his family. No evidence of SI/HI. Next group 18Sept2017.

S/O Note Written by DEUTSCH, ANNE MARIE @ 11 Sep 2017 1130 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: 1000-1100: Sleep Improvement Group in IOP. Group led by Dr. Deutsch, psychologist. This was the first session of the 4-week sleep improvement series, which meets to address insomnia and nightmares from a CBT-I perspective. Members were introduced to the topic of sleep as a whole, and were given a National Sleep Foundation quiz on their knowledge about sleep. Patients were given handouts on sleep architecture and sleep hygiene. A lively discussion ensued re: the relationship between dreams and anxiety. This SM was attentive and well-engaged throughout. No evidence of SI/HI. Next sleep improvement group will meet in one week.

Reason for Visit

Visit for: (1230-1400) Comprehensive Recovery Program- Recreation Therapy- Facilitators: This writer Penny Miller, recreation therapist, Narcedalia Pratt, social worker and Jessica Shipman, WRNMMC Hospital Recreational Arts Coordinator.

Purpose: This session provided the patients with the opportunity to be creative, self-reflect and apply safe coping skills.

Activity: Patients were introduced to the activity of "Japanese Book Binding". Patients were provided with step-by step instruction in order to complete the process. Steps for book making consisted of cutting, folding, and prepping pages, clamping materials and piercing holes with an awl, and weaving binding thread through to secure pages. Patients were provided with tools, materials, and instructions, and were then given time to independently work. When finished, pts were given the opportunity to share their book with the group and discuss their experience, as well as coping skills used during the process. Patients were encouraged to think about how they can transfer the skills used during the session into their daily lives.

Participation: This patient was actively involved in the book making process. Patient used creative abilities to express thoughts

SLEEP ASSESSMENT

S/O Note Written by LANDE, RAYMOND G. @ 08 Sep 2017 0946 EDT

Reason for Visit

Visit for: Attending Note: SM referred for enhanced sleep assessment.
45 minutes.

History of present illness

The Patient is a 32 year old male.

He reported: Sleep This was a valid study. Total Sleep time = 6 hours and 16 minutes. The pApnea/Hypopnea index = 8.3, Mean oxygen saturation = 94, Mean heart rate = 67, Rapid eye movement (REM) % = 17.93, Deep Sleep % = 4.92, Light Sleep % = 77.16 Wake % = 18.33, Sleep latency (minutes) 23, REM latency (minutes) 174, Number of Awakenings = 11, BMI=23.5, The SM had two REM episodes. The SM appeared to awaken from light sleep.

Objective

Plan: SM has screening evidence for mild breathing problems while asleep. SM has decreased deep sleep and REM sleep latency. Consider referral to sleep clinic.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Additional testing for Autism had been requested by this SW. We discussed SM behaviors and whether or not he felt that these behaviors meet the criteria for Autism. SM feels that knowing his diagnosis will be helpful to understand his limitations and to make future plans for his career. In general SM feels that his anxiety has gone down in the past few days. He is not sure if this is due to medications or the lessening of stress, as he is not working. He said that his providers have differing viewpoints as to his future in the military. Dr. Paul is advocating for SM to be separated from military but Dr. Tobar would like SM to continue to get more mental health treatment. Dr. Pourzand entered and joined discussion on treatment for about 10 minutes. We also discussed SM's Irritable Bowel Syndrome. SM reported that he has scheduled weekend plans and is pleased that he will not be isolating. We will meet again on Tuesday. No SI/HI plan or intent present.

S/O Note Written by SMITH, JESSICA ANN @ 08 Sep 2017 1319 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Innovations Group 20 min group-(SM dispersed into individual innovations) facilitated by: Ms. Buford, Ms. Braggs, Dr. Pourzand, Mrs. Smith. During this group the SM were given the opportunity to learn about the various types of innovations offered at PCS to include light therapy, Alpha-Stim CES/MET, Brain Computer Interface, MindFlex, MUSE, and temple massager. SM participated in group. SM engaged in individual innovative activity (see individual encounter in AHLTA). No indication of distress. No indication of SI/HI. Next group Friday.

S/O Note Written by SMITH, JESSICA ANN @ 08 Sep 2017 1517 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: INTENSIVE OUTPATIENT PROGRAM (IOP)-PSYCHIATRIC SERVICES: This HCPCS code issued per MHS and MEDCOM IOP guidance to capture RVU credit for all group therapy services provided in the morning. The first half of this daily IOP program is comprised of a full morning program from 0730 to 1130.

S/O Note Written by BRYANT, JASMINE RESHA E @ 08 Sep 2017 0846 EDT

Objective

Assessment: 2 hours. SM was escorted by writer from PDS lobby to RM 4116 for continued DX testing. Testing was completed 8 DEC 2016. SM was sociable, paranoid, and cooperative during testing AEB asking if he could "get into trouble over testing answers?" SM reported "abusing prescribed medications" in order to "feel high" and stated he was worried about "being honest." SM was redirected and continued with testing. SM stated mood was "anxious, energetic, and content" and his affect was bright and congruent with mood. SM reported 2-3 weeks of increased "anxiety" due to "everyday" triggers. SM reported a "normal" appetite with 1-2 small meal consumption throughout the day. SM reports having chronic IBS and is currently MEDBRD out of the military due to its "discomfort." SM reported a significant weight loss of 12lbs within a 60 day period. SM reports he is refraining from alcohol and it could be his "main contributor" to his recent weight loss. SM reported a "poor" sleep pattern with difficulty staying asleep with a possible sleep disorder. SM reports 6-7 hours of restless sleep per night with a medication aid to "slight" effect and relief. SM reported experiencing sleep paralysis on a "frequent" basis and vivid nightmares about "real life situations." SM denied to clarify. SM is currently awaiting a sleep study with the Sleep Clinic here at Walter Reed. SM reports a 2/10 intestinal pain. SM also has a H/O of headaches/migraines but, did not experience any while testing. SM currently denies any SI/HI/AVH. SM escorted himself back to IOP and was advised to speak with social worker before resuming scheduled activities. Writer informed front desk of SM arrival.

Tests

PAI, AQ completed today

Testing completed 8 DEC 16 MMPI-II, MCMI, RISB

Plan

Limits of confidentiality was explained and understood by SM. Original documentation can be found in BLD 10 7C RM 7131. DX Interview to be scheduled and completed by Dr. Benton.

Bethesda, MD 20889

PSYCHOLOGICAL EVALUATION ADDENDUM**NAME:** Daniel Anderson (nee Merwin)**SSN:** 20/8503**RANK:** PO2**DATE:** 01AUG17**IDENTIFYING AND REFERRAL INFORMATION:** SM is a 31 year old, single, male, Caucasian, AD USN, PO2, Cryptologist. SM was referred by Ms. Laura Donkin, Social Worker, with Psychiatric Continuity Services for diagnostic clarification of Autism and Borderline Personality Disorder.

It should be noted SM received a psychological evaluation conducted by 2LT Hannah Martinez, Doctoral Practicum Student, with PsychoDiagnostic Assessment Services on 02FEB17. This writer served as a covering supervisor for the psychological evaluation. SM was referred for the psychological evaluation by Dr. Sherin Paul, Clinical Psychologist, with Adult Outpatient Behavioral Health for diagnostic clarification. The consult indicated SM has a history of undiagnosed Borderline Personality Disorder and Reactive Attachment Disorder. SM's family history is also significant for Bipolar Disorder.

On 08SEP17, SPC Jasmine Bryant administered the Personality Assessment Inventory (PAI) and Autism Spectrum Quotient (AQ). 2LT Hannah Martinez administered the Minnesota Multiphasic Personality Inventory-2nd edition (MMPI-2), Million Clinical Multiaxial Inventory-Third Edition (MCMI-III), and Rotter Incomplete Sentence Blanks (RISB) on 02FEB17. This writer conducted a collateral interview with Ms. Despina Hangemanole, Social Worker, with Addiction Treatment Services on 13SEP17. Dr. Benton conducted a collateral phone interview with Dr. Sherin Paul, Clinical Psychologist, with Adult Outpatient Behavioral Health on 14SEP17.

Please refer to AHLTA records and the original psychological evaluation for a comprehensive background history.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

MMPI-2: The validity indicators suggested that SM endorsed test items in a manner to cry for help. SM is likely to present with extreme somatic problems or chronic pain and to complain of being physically ill although there may not be an organic basis to his problems. He is anxious, tense, nervous, restless, irritable, dysphoric, brooding, and unhappy. He has a loss of initiative. He reported depressed mood, social withdrawal, and reclusiveness. He is self-conscious in talking with others. Doubts about his abilities are common, as is vacillation and indecision about even minor matters. SM is hypersensitive to criticism.

MCMI-III: The validity indicators suggested that SM was being open and honest. SM does not have any close friends, so he tends to remain detached and isolated. There is evidence that SM strongly wishes to be liked and accepted by others on his terms. He is often guarded and experience social situations negatively. SM is apprehensive and nervous in social situation. SM usually avoids relating to others, which forces him to give up the support and affect that the relationship might have brought. Life is experienced as a conflict between taking a risk and accepting the discomfort of forming a relationship or retreating to the unfulfilling safety of isolation.

PAI: The results of the PAI were considered invalid. SM consistently endorsed items that portrayed him in an especially negative or pathological manner. The test results involved considerable distortion and does not reflect an inaccurate reflection of SM's psychological functioning.

AIQ: The Autism Spectrum Quotient is a questionnaire used to determine the extent to which an adult of normal intelligence has the traits associated with Autism spectrum conditions. A content analysis of the AIQ indicated SM elevated on the measure due to his endorsement of social avoidance; he did not endorse the developmental criteria of Autism and Asperger's Disorder.

FINDINGS AND CONCLUSIONS: SM is a 31 year old, single, male, Caucasian, AD USN, PO2, Cryptologist. SM was referred by Ms. Laura Donkin, Social Worker, with Psychiatric Continuity Services for diagnostic clarification of Autism and Borderline Personality Disorder.

Given all available information to include psychometric instruments, chart review, diagnostic interview, and collateral interviews, SM does not have Autism or Asperger's Disorder. SM does have relational apathy or a lack of emotional reciprocity but this is not enough to substantiate the disorder. SM has the ability to cultivate age appropriate friends and relationships. Furthermore, there is no impairment in the use of nonverbal behaviors. There is no impairment in communication particularly selective mutism that is commonly found with these disorders. There is no evidence of inflexible adherence to routines or rituals. He has not demonstrated persistent preoccupation with parts of objects. This writer did not observe repetitive motor mannerisms. SM's social detachment and emotional numbness could represent a schizoid adjustment, a neurotic reaction, abuse history, or simply a lifestyle preference yet it is not Autism.

There is evidence from testing of Schizoid Personality traits characterized as lack of interest in social relationships, a tendency towards a solitary or sheltered lifestyle, secretiveness, emotional coldness, detachment, and apathy. There is research to support that Schizoid Personality traits are developed due to an insecure attachment in childhood. This is consistent with his prior history of Reactive Attachment Disorder. However, SM grew up in an environment with physical, sexual, and emotional abuse. He was in a household with a father that had an authoritarian parenting style, which contributed to him being overly controlled, unable to express emotions, and living in fear. SM's emotional development is stunted due to the childhood environment he was reared. SM is emotionally immature; emotionally immature people can be extremely challenging to deal with, because their ability to interpret and react to the variety of life's challenges is often impaired. When emotionally immature people do not get their way, they often respond to their circumstances in ways that are irrational. They need to control and this lack of control motivates them to act out. They pout, whine, cry, manipulate, or violate the object of their obsession, all the whilst believing they are entitled to behave this way.

AR 0317

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

SM has mood swings, anger outbursts, hyper sexuality, and suicidal ideations/gestures that can be function of his emotional immaturity. Although these behaviors can be symptoms of Borderline Personality Disorder, psychological test results do not support SM having a personality disorder. The hallmark feature of Borderline Personality Disorder is the fear abandonment. SM does not have a fear of abandonment. SM is introverted, socially withdrawn, and prefers his own company. Typically, SM cuts people off when they become too close to him. This seems to be more of a function of his schizoid personality traits and attachment style. When his personal space is violated, he feels suffocated and desires independence. It should be noted that like individuals with schizoid personality traits, SM is capable of developing relationships when they are based on his terms. His terms do not include emotional intimacy. For example, he desires to connect with his family of origin but with self-imposed boundaries. Additionally, SM indicated he has a relationship with his neighbors in which he can come and go friendly into their home without demands or expectations. This is how he desires all of his interpersonal and romantic relationships. SM is happiest when people place few emotional and intimate demands on him. It is not people that SM wants to avoid, it is the emotions but since there are no emotionless people it is easier to socially withdraw.

RISK ASSESSMENT: SM has a history of suicidal ideation occurring approximately once a month since adulthood. His protective factors include his job, his hobby of creating video games, and wanting to find purpose in his life. SM has low social support, but this does not seem to be a significant stressor. SM does not have a history of attempts and denies access to lethal means. He denied current ideation, plan, or intent. SM is currently assessed at a mild risk for suicide, and should continue to be monitored by his healthcare providers.

DSM-5 Diagnoses:

Given the level of information obtained for this assessment, the following DSM-5 diagnoses are warranted:

Other Specified Trauma and Stressor Disorder
Schizoid Personality Traits
Reactive Attachment Disorder – By History

If there is a need for further discuss of this case, please feel free to contact the undersigned at 301.400.0591.

Jikesha Benton, Psy.D.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: 1215 Check in to PCS afternoon program. SM denied SI/Hi. Will attend afternoon groups.

S/O Note Written by DONKIN, LAURA G @ 07 Sep 2017 1414 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: 1230-1330. Intensive Sleep Improvement Group for CRP. Facilitator: Laura Donkin, LCSW-C. This bi-monthly group is meant to be an adjunct to the morning Sleep Improvement Group. In this group, members will explore their sleep issues in a more personal and intensive way. We review topics such as: napping, nightmares and sleep hygiene. Today we focused on the physiological and mental benefits of sleep. We discussed sleep hygiene and went around the room asking each group member what they're doing right and how they can improve. Group members discussed benefits of power napping. The group unanimously agreed to practice power napping for last 10 minutes of the group. SM actively contributed to group discussion. We will meet again on 21 September, 2017. No SI/Hi plan or intent present.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: COMMUNICATION SKILLS
FACILITATORS: Dr. Georica Gholson, psychologist and Mrs. Delacie Gardiner, psychiatric technician from 1330-1420.
Purpose of communication skills group is to explore and discuss components of communication among co-workers, peers, family, and friends, and to use effective communication strategies to enhance and improve relationships.
Intervention: Discuss and identify aspects of "fighting fair/unfair." Discuss elements of what constitutes a conflict and which behaviors can escalate a conflict. Additionally, group discussed how "unfair fighting" can become abuse and which behaviors are

Medical Record

considered verbal and emotional abuse. SM participated in group. He discussed how his father's conflict style influenced how he manages arguments. Additionally, he explained that he is passive in arguments and will stockpile. He was able to recognize how stockpiling can damage relationships and expressed how he struggles with confronting others about offenses in the moment

No indication of SI/HI.

Next group scheduled for 21 September 2017.

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s):
-Psychiatric Therapy Individual Approximately 30 Minutes x 2
-Psychiatric Therapy Group Interview x 1

Disposition Written by POURZAND,MIRIAM @ 08 Sep 2017 1242 EDT

Released w/o Limitations

Follow up: 1 day(s) in the PSYCH DAY HOSP BE clinic or sooner if there are problems. - Comments: The patient agrees to seek treatment at or call the NMMC Emergency Room (301) 295-4810/11 should there be a significant worsening in symptoms, intense distress, or thoughts about harming self or others.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. 120 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

SLEEP ASSESSMENT

S/O Note Written by LANDE, RAYMOND G. @ 07 Sep 2017 0720 EDT

Reason for Visit

Visit for: Attending Note: SM referred for enhanced sleep assessment. 45 minutes.

History of present illness

The Patient is a 32 year old male.

He reported: Sleep SM described sleep as follows. SM goes to bed at 2200 and awakens at 0600. During the night's sleep it takes SM 15 minutes to fall asleep after which SM awakens 2-3 times "noise, bathroom, dreams". SM feels "unrested" upon awakening. SM does not snore, does not talk in sleep and has no morning headaches. SM last use of alcohol two weeks ago. SM uses no nicotine.

Epworth = 18 PreSleep = 13/17 PIRS = 37.

Objective

Plan: SM instructed in proper use of device. Device passed test. SM instructed to return device tomorrow.

The Patient is a 32 year old male.
He reported: Encounter Background Information: (1230-1430) Life Skills Training- Therapeutic Field Exercise (TFX)"Golf Clinic" Staff: Penny Miller, recreation therapist, PO3 Bryant Seeley, corpsman and Dr. Georica Gholson, psychologist.
Co-facilitator was present to provide support. Co-facilitator ensured the activity and group members were safe, actively participated, and observed and remediated any disruptive behaviors.
Today's TFX consisted of transporting the group to Olney Golf Park, Olney MD for a golf instruction sponsored by Salute Military Golf Association (SMGA). The objective was to provide an opportunity for patients to recreate and to learn golfing fundamentals in a safe supportive environment. The goals for today's golf clinic were: 1) recreation participation 2) socialization and 3) physical activity. Today was the golf clinic consisted of the provision of lunch (sandwich, cookie, chips and water) , golf equipment and golf instruction from professional PGA golfers and SMGA volunteers. Today patients spent time on the driving range where they learned how to grip the club, and swing for short and long distances. At the end of the session a team building competition was provided, enabling patients to work together to reach a common goal. Post activity a group discussion about the experience they created and coping skills used .
Participation: Pt actively participated throughout the session. Pt ate lunch with the group and was receptive to golf instruction. 13 patients attended this TFX No suicidal ideation, homicidal ideation, plan or intent noted. Next LST Therapeutic Field Exercise (TFX) is scheduled for Wednesday October 4, 2017.

Notes from current session:

Patient presents for follow-up appt. We last met four weeks ago, at which time pt was waiting to find out if his command would allow him to attend IOP. Since that time he was accepted into the program and started it last week. He has been feeling more depressed and anxious and says his phq9 and gad7 scores are higher today because he is answering the questions more honestly now. He has felt increasingly upset with his command as he finds them very unsupportive. He cites as examples that they tried to separate him for his ATS enrollment, calling it a treatment failure even though he self-referred. His ATS counselor contacted his command to intervene. He also states there was an 'all-hands' meeting about him in which the reasons his clearance were revoked and other topics were discussed per pt in front of 150 service members without his knowledge, supposedly to minimize gossip about him. WE discussed these episodes as triggers for his increased depression and anxiety symptoms. HE states his MEB referral for IBS was accepted, which he is pleased about. He is not sure if Effexor xr is helpful. He still has cravings to drink despite taking naltrexone and feels tired all the time. He has a sleep study coming up. He has cut out all caffeine and has been having headaches, about which I encouraged him to speak to his PCM. HE states he has a number of medical conditions he wants documented in his chart for his medical board. He admits he had a thought over the weekend of jumping off a building while sitting on the toilet but denies intent to act.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembrukska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported

Depression - PHQ2: 2 - Depressive Syndrome Unlikely

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)
 Asthma during childhood
 Allergic response to pets
 Recurrent intestinal pain (possibly lactose intolerance)
 PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will continue medication

DoD ID: 1286180538

Created: 30 Oct 2017

Intervention: increase Effexor to 225 mg po qam, as family members had good response to this medication. Monitor for emergence of manic symptoms. Counseled pt on risks/benefits and he consented to treatment.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will abstain from drinking

Objective: pt will refrain from alcohol use

Intervention: continue naltrexone 50 mg po daily. Consider adding acamprosate in future as pt reports continued cravings, though he has not relapsed. Normal b12 panel drawn after July 2017 visit.

Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Follow-up: three weeks

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

 IOP

S/O Note Written by DONKIN, LAURA G @ 06 Sep 2017 0935 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Positive Psychology Group 0800-0900 facilitated by Laura Donkin, LCSW-C and Ms. Gardiner. The purpose of this group is to assist patients in viewing themselves and their situations based on their strengths, rather than weaknesses or symptoms, with the aim of helping them flourish and live a fulfilling life. Today's group was focused on reviewing the factors identified by Dr. Martin Seligman, which are present in people who describe themselves as happy. Today's discussion was centered on Accomplishment and how this factor can enhance one's feelings of happiness. SM actively participated in group discussion. The next group will be held @ 0800 on Wednesday, 13 September. No SI/HI plan or intent present.

IRP

S/O Note Written by DONKIN, LAURA G @ 05 Sep 2017 1405 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Anger Management Group 1230-1330. 5 September, 2017. Facilitator: Laura Donkin, LCSW-C, and Ms. Gardiner
Purpose: The purpose of this group is to help people understand the effect that anger has on their lives. Members will be taught techniques to reduce their anger and learn alternate ways of expressing their thoughts and feelings in a safe and supportive environment. This will be achieved by encouraging them to learn ways to identify the triggers and precipitants that lead to anger and frustration.
Topic(s): "Anger Thermometer" Group began with a discussion of personal experiences with anger. A worksheet with a thermometer was used for members to rate their experiences with feelings of anger, and to measure their reactions on a scale from 1 to 10. We then reviewed positive coping skills for stress relief and anger management. Patient participated in group activity and discussion. No indications of suicidal/homicidal ideation, intent, or plan present. Next group will be held on 11 September, 2017.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Emotion Regulation (0800-0900) Facilitated by Anne-Marie Deutsch, Ph.D
Purpose: To introduce patients to Emotion Regulation strategies as ways to: understand the emotions they experience (correctly identify and label emotions); work to reduce emotional vulnerability by increasing pleasant emotions; work to decrease emotional suffering by letting go of painful emotions; and change painful/unpleasant emotions by acting in the opposite manner.
The content for this session focused on a structure to use in managing emotions, specifically a handout entitled "Recovery Action Plan". Group members answered questions such as "What do I notice when I am not doing well?" and others related to maintaining good emotional balance. SM was late to group – he was quiet throughout the session and there were no concerns regarding SI/HI, intent or plan. The next emotional regulation group will be in one week. SM released without limitations to attend 0900 group.

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Distress Tolerance Group, (1000-1050). Facilitated by Ms. Helen Lowenstein, LCSW.
Purpose: To teach patients skills to identify potential distressing events and to teach them to manage negative emotions/negative experiences without exacerbation of a perceived crisis.
Patients will also be encouraged to become aware of ways they escape severe emotional pain through destructive behaviors and/or relationships. Time will also be spent helping patients learn to tolerate the distress.
Topic: Distress Tolerance Cheat Sheet Hand out was discussed and discussed self soothing techniques for coping skills in distressing situations and the importance of practicing coping skills when not in distress to incorporate them into ones life. Patients were then asked to come up with a list of coping skills either they tried in the past that were positive and worked or ones they would like to try in the future. Each patient was provided turns to act or draw a coping skill and tell when it is good to use and why. The rest of the group was able to guess what the coping skill was. This sparked discussion on adopting healthy new coping skills and

behavior.

PARTICIPATION: PT was an active participant throughout the group. PT drew his coping skill and explained why it is important. No evidence of SI/HI. Next group to meet 09/12/17 at 1000.

S/O Note Written by DONKIN, LAURA G @ 05 Sep 2017 1114 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Individual note. SW met with SM for individual 1:1 session from 0900-0955. SM described Labor Day holiday as generally difficult and said that he is not drinking but "it was really hard." SM admitted to spending a lot of the time in bed. SM said that he has been reading excerpts from his mother's journal over the period of his childhood to help him refresh his memory of abuse from father and to clarify his emotions towards his father. SM read this SW from the journal and we used these passages as talking points. As SM was sharing incidents of childhood with this SW, he segued into discussion about sister who was diagnosed as bipolar and acted out in childhood and adolescence. SM admitted to sexually molesting sister when he was age 15 and she was 15. He said that father found out and called it "rape" and used it against him. He was punished for 1 year. SM did not share his feelings about this incident, but says that he and this sister do not communicate. SM also said that due to abuse from father, he was in Foster Care for a few weeks and that both sisters had attempted suicide. SM stated that he has had almost no contact with father over more than 10 years. This SW explored what SM his hoping for from father. SM would like some sort of apology for abuse, but at the same time knows that he will never get this. We also discussed his ambivalence towards father, as he is still hoping for recognition even though he says that he hates father. SM will think more about maintaining this emotional connection to father and why he finds it so difficult to let go of his need for love from him. SM admitted to fleeting suicidal ideation over the weekend but said that it was over in a few minutes. SM currently denies SI/HI plan or intent. We will meet again on Friday.

S/O Note Written by DONKIN, LAURA G @ 31 Aug 2017 1401 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Life Skills Group 1230-1330. Facilitator: Laura Donkin, LCSW-C. This CRP group addresses behaviors which promote a healthy and independent life style. Topics include: strategies for time management, building a support network, resilience, and relapse prevention. Today's topic was, "Treatment Expectations Survey." Patients filled out survey for their treatment expectations and the most important expectations were discussed by patients. SM actively participated in group discussion. The next group will be held on 7 September.

No SI/Hi plan or intent present.

S/O Note Written by GHOLSON, GEORICA K @ 31 Aug 2017 1435 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: FORGIVENESS RELATIONSHIP SKILLS 1330-1420
FACILITATORS: Dr. Georica Gholson, psychologist and Mrs. Delacie Gardiner, psychiatric technician
Purpose: Explore and discuss components of healthy relationships, including peers, family, and friends. The group aims to guide patients into identifying maladaptive and adaptive relationship behaviors. Furthermore, the group aims to help patients apply concepts to their daily lives to strengthen their relationships, cultivate new relationships, and to improve discernment about relationships that may be beneficial or harmful to their recovery process.
Group task: Group members defined and discussed the concept of forgiveness. Group members described situations in which they forgave others. Additionally, they discussed barriers and challenges to forgiveness. Participation: SM participated in group discussion

Assessment: No indication of distress. No indication of SI/Hi

Plan: Next group scheduled for Thursday 7 September 2017.

The Patient is a 32 year old male.

He reported: Encounter Background Information: Purpose: Alpha Stim Therapy 0800-0830 Registered Nurse met with the patient today for a follow-up Alpha-Stim session. The Alpha-Stim device was sought as an alternative therapy to target anxiety, depression, and insomnia. The patient was given directions about completing the Alpha-stim session. Before the initiation of the protocol the patient reported that he slept 6 hours interrupted sleep last with nightmares. Reports taking a 3 hour nap in the evening as well. The intensity was adjusted from 0 uA to 4.0 uA. After completion of the session, pt denied side effects (i.e. dizziness, headache). The patient was asked to monitor the amount and quality of his symptoms that night and report on his progress the following day. The patient was scheduled for a follow-up appointment tomorrow.

He reported: Encounter Background Information: MORNING GROUP THERAPY SUMMARY NOTE 0730-1100: HCPCS CODE S9480:
INTENSIVE OUTPATIENT PROGRAM (IOP)-PSYCHIATRIC SERVICES: This HCPCS code issued per MHS and MEDCOM IOP guidance to capture RVU credit for all group therapy services provided in the morning. The first half of this daily IOP program is comprised of a full morning program from 0730 to 1130.

S/O Note Written by LOWENSTEIN, HELEN T @ 31 Aug 2017 1343 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: (1000-1050) - Recreation Therapy- "This group was facilitated by Penny Miller, recreation therapist and Helen Lowenstein, social worker LCSW.
Purpose: To provide an opportunity for healthy communication, problem-solving, encourage teamwork and compromise. Patients were divided into 4 teams two teams played Uno and provided coping skills they utilized in the past that were healthy ones when needed when it was their turn or ones they want to try in the future. This was a way patients could recreate yet utilize skills to help in distressing situations. The other two two teams played games and shared coping skills.
TOPIC: Leisure planning and recreation. The ice breaker was an activity to get the patients to recreate and learn to work together. The game musical chairs was played and the group worked together in removing chairs from tables and supporting each other if they didn't make it to the next round. Then a hand out was provided discussing leisure planning and they were asked to get a partner and share their healthy plans for this weekend. Two additional hand outs were providing for coping skills list to prepare them in case stressful situations arise over the weekend.
Participation: PT was an active participant throughout the group. No evidence of SI/I or HI. Next session is scheduled for 9/07/17, 1000.

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538

Created: 30 Oct 2017

The Patient is a 32 year old male.

He reported: Encounter Background Information: Individual Note. SW met with SM for individual 1:1 session from 0810-0900. SM presented in positive mood and was talkative throughout session. This was SM's first individual session and we explored some areas that we will focus on for treatment. SM described himself as very OCD and described some of his behaviors. SM would like to learn to be more flexible in his behaviors and in thought processes. He has difficulty deciding if he is an introvert or extravert and said that he vacillates in between the two. SM said that he has always had difficulty forming lasting friendships which also disturbs him. We spent much of session discussing his relationship with his father, who was generally physically and emotionally abusive during most of childhood. SM did not recognize that he was being abused until later in high school and realized how manipulative father is. He worries that he has many of the same negative qualities as father. He admits to having fleeting thoughts of suicidal ideation for 30 seconds a few days ago, but currently denies this. SM would also like to form intimate relationships which are not co-dependent, as most have been in past. He is currently working on being more strict with himself on sleep hygiene. No SI/Hi plan or intent present. We will meet again on 5 September.

Reason for Appointment: Written by DEUTSCH, ANNE MARIE @ 31 Aug 2017 0718 EDT
Treatment Plan Update Team A/BHDP

S/O Note Written by DEUTSCH, ANNE MARIE @ 31 Aug 2017 0719 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information:
Daniel Anderson
Follow-Up Data Only
Psychological testing - Reviewed and interpreted psychological tests from BHDP. These are only one source of data and should be interpreted in the context of the patient's entire presentation. The BHDP scales are reported and briefly interpreted as follows.

Behavioral Health Vitals (patient reported):
Overall health reported as: Good
Pain Level (0-10): 3 Currently treated: Yes
Suicidal Ideation Risk - C-SSRS score: 3 Past/Prep Behavior last 3 months: No
past attempts as of 09/06/2016: 3
Most recent Suicidal Ideation: 2-4 weeks ago
Suicidal Ideation Duration: Fleeting - a few seconds or minutes
Suicidal Ideation Frequency: Once a week
Protective Elements Stopping Suicidal Actions: Family, Fear of failing
Harm Others Risk over next week as of 8/29/2017 - None Active Plan: N/A
Patient with access to weapons: No
Recent Outcome Measures (last 30 days)
BASIS24 - Score: 3.1 - High levels of general distress reported (8/29/2017)
PHQ9 - Score: 22 - Severe depressive symptoms reported. Evaluation indicated. (8/29/2017)
GAD7 - Score: 21 - Severe anxiety symptoms reported. Evaluation indicated. (8/29/2017)
PCL-5 - Score: 65 - Significant PTSD symptoms reported (8/29/2017)
PCL-C: N/A
AUDIT - Score: 20 - Probable Alcohol Dependence, consider treatment/ASAP referral (8/29/2017)
CSI: N/A
ISI - Score: 25 - Clinical insomnia (severe) (8/29/2017)
BAM: Risk/Protection/Use (subscales) - Score: 14/16/0 - Moderate-High Protection (8/29/2017)
TREATMENT PLAN UPDATE Treatment team met today to discuss treatment plan for this pt. Present were Dr. Pourzand, Ms Smith, Ms. Donkin, Ms. Van Fossen, Ms. Buford and Dr. Deutsch. Medication reconciliation completed per Dr. Pourzand (see

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Art Therapy (1230-1400) Facilitated by Mallory Van Fossen ATR-BC, LCPAT, Art Therapist; and Maggie Hardy, LCSW-C, Social Worker. This session provided pts with the opportunity to visually process thoughts, emotions and therapeutic concepts, and to utilize art making as a means of grounding. Pts were provided with a topic, and then instructed to create the corresponding artwork based upon thoughts and images that came to mind in response. The artwork directive was to "make a drawing containing a door". Pts were asked to consider how the topics of opportunity, obstacles, inside, outside, and functionality could be related to the topic. Pts were also asked to think about how the imagery of a door could depict a theme as a symbol or a metaphor, and focus on making meaning from the image. Ultimately, pts were encouraged to make their own meaning from the topic, and set their own intention for how they would like to communicate this. 2D materials were used, consisting of pastels, pencils, markers, or chalks. Pts were given 60 minutes to independently work. Discussion followed, in order to process any issues or content that may have been prompted by artmaking. Topics consisted of viewing the door as a barrier versus an opportunity, the nature of having to choose between multiple paths, if keeping things out also functions to keep things in and whether or not this is ideal, doors relating to protection, and who if anyone- including us- are able to pass through the door we have depicted. There was no indication of SI/HI. Next art therapy session will be held 31 August, 2017.

Art Therapy (1230-1400) Facilitated by: Mallory Van Fossen, ATR-BC, LCPAT, Art Therapist;

Co-facilitated by Margaret Hardy, LCSW-C, Social Worker

OBJECTIVE- This session provided pts with the opportunity to visually process thoughts, emotions and therapeutic concepts, and to utilize art making as a means of grounding.

SUMMARY OF PROMPT- Group instruction was to create something using any of the materials in the art room with a door. Pts were encouraged to not only consider the subject matter (what is actually drawn- colors, lines, shapes, symbols) but their approach to the materials (the process of artmaking, technique, organization, apprehension or openness) as being meaningful, and able to provide them with insight.

This writer co-facilitated art therapy in order to provide clinical support, contribute to discussion by offering therapeutic feedback, and provide additional resources in order to assist service members manage stressors and prevent crisis situations. There was no indication of SI/HI. Next Art Therapy session will be Thursday, 31 AUG 2017.

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Purpose: Alpha Stim Therapy 0950-1020 Registered Nurse met with the SM today for an initial Alpha-Stim session. The Alpha-Stim device was sought as an alternative therapy to target anxiety, depression, & sleep problems. The pt was given directions about completing the Alpha-Stim session. Before the initiation of the protocol, SM reported 7 hours of interrupted sleep last night with one nightmare, depression 8/10, anxiety 10/10, 1/10 pain in stomach, 1/10 anger at this time. During the initial stages of the Alpha-Stim session the intensity was adjusted from 0 uA to 4.0 uA. After completion of the session, pt denied side effects (i.e. dizziness, headache). The pt was asked to monitor the amount and quality of his symptoms that night and report on his progress the following day. The pt was scheduled for a follow-up appointment tomorrow.

S/O Note Written by DEUTSCH, ANNE MARIE @ 30 Aug 2017 1025 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: 0800-0850: Positive Psychology group, cofacilitated by Dr. Deutsch, psychologist, and Ms. Gardner, psychiatric technician. This group is designed to help members learn ways to increase well-being, meaning, and joy in their lives using research-based methods of positive psychology. Today's group was based on the acronym PERMA as developed by Seligman: Positive Emotion, Engagement, Positive Relationship, Meaning, Accomplishment. Today's discussion focused on relationships and life meaning. Members discussed what constitutes a relationship and appreciating the value that they bring to our lives. We then moved to exploring what brings purpose to our lives. This SM was attentive and well engaged in the discussion. There was no evidence of SI/HI. Next Positive Psychology group meets in one week. SM released without limitations.

S/O Note Written by MILLER, PENNY E @ 30 Aug 2017 1121 EDT

Reason for Visit

Visit for: (0900 - 0930) Sensible Thinking Group This group is facilitated by Jessica Smith, social worker and supported by this writer Penny Miller, recreation therapist

Purpose: This group teaches the principles of cognitive behavioral therapy and helps patients to reexamine their thoughts and core beliefs in order to exhibit more positive behaviors.

Activity: CBT concepts were presented focusing on cognitive distortions. Pt's discussed how to cope with irrational thinking in the military and civilian structure using CBT concepts. This writer served as a support to the group therapy process.

participation: Pt participated in the group process. Pt left around 0930 and did not return due to being called out of the session by Dr. Pourzand, nurse practitioner. Next Sensible Thinking group is scheduled for Wednesday September 6, 2017. No indications of suicidal or homicidal ideation, intent, or plan.

(This note was written by Penny Miller, CTRS, LCSW-C recreation therapist).

S/O Note Written by SMITH, JESSICA ANN @ 30 Aug 2017 1329 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: IOP Group: Sensible Thinking: 0900-0950: Group facilitators: Jessica Smith LCSW and Penny Miller, CTRS LCSW

Purpose: To provide psycho education on cognitive behavioral therapy, cognitive distortions, and application to current situations. Facilitate discussion on how thoughts influence behavior and helpful/unhelpful thinking patterns. Intervention: Handout provided on common cognitive distortions. Facilitated discussion of negative thinking patterns such as generalization, black and white thinking, personalization, etc and how those thinking patterns influence emotions. Discussed how thinking patterns can be challenged and adjust to create different emotional responses. Participation: Patient was attentive throughout psycho education and participated in group discussion. Patient was receptive to peer feedback.

CRPS/O Note Written by DONKIN, LAURA G @ 29 Aug 2017 1353 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Intensive Anger Group 1230-1320 29 August, 2017 Facilitator: Laura Donkin, LCSW-C and Ms. Gardiner

Purpose: The purpose of this group is to help people understand the effect that anger has on their lives. Members will be taught techniques to reduce their anger and learn alternate ways of expressing their thoughts and feelings in a safe and supportive environment. This will be achieved by encouraging them to learn ways to identify the triggers and precipitants that lead to anger and frustration.

Topic: "I Know You Are But What Am I?" Patients were asked to draw a picture that best describes their character when they are angry. They were then asked to explain their drawings and the characteristics of the animal they chose, to the group. Group members reacted positively to this exercise, and lively discussion ensued. Patient drew a picture of a cub and a bear. He said that when he becomes angry, the cub turns into a bear. Next group will be held on next Tuesday, 5 September. No indications of

S/O Note Written by LOWENSTEIN, HELEN T @ 29 Aug 2017 1442 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Comprehensive Recovery Program (CRP), Emotional Regulation, Stress Management Group (1330-1430) - Staff Present: Narcedalia Pratt, LCSW-C and Helen Lowenstein LCSW.

PURPOSE: The purpose of this group is for patients to discuss possible stress triggers as well as strategies or plans to cope with them. This group focuses on methods patients can implement in their lives to reduce stress in short-term and long term situations.

TOPIC: Today's group focused on "Self-Care Assessment" that explores stress reduction methods consisting of avoid, alter, accept and adapt. This writer served as co-facilitator of this group, checking on reactions of individual members, following up with members who showed distress or confusion, and checking for safety with members who leave the room.

PARTICIPATION: This writer served as an observer to help with any patients that may be in distress. No evidence of distress. No evidence of suicidal ideation, homicidal ideation, plan or intent noted. Next session is scheduled for Tuesday 9/5/2017.

Pt checked out from afternoon program at 1430.

Pt denies SI/HI.

Pt reports following appts on tomorrow, Wednesday 30 August: 1100 VA appt in Bldg 11.

Pt will return to program tomorrow at regularly scheduled time.

S/O Note Written by PRATT, NARCEDALIA @ 29 Aug 2017 1510 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Comprehensive Recovery Program (CRP), Emotional Regulation, Stress Management Group (1330-1430) - Staff Present: Narcedalia Pratt, LCSW-C and Helen Lowenstein LCSW.

PURPOSE: The purpose of this group is for patients to discuss possible stress triggers as well as strategies or plans to cope with them. This group focuses on methods patients can implement in their lives to reduce stress in short-term and long term situations.

TOPIC: Today's group began with introductions and identifying a self-care thing that they have done this week to take care of themselves. All service members participated. Service members were introduced to the "Self-Care Assessment", exploring 3 out of the 6 areas of self-care: physical, psychological, emotional, spiritual, relationship and workplace self-care. Patients filled in a worksheet for each of the aforementioned domains rating tasks according to how well they think they were doing each. A discussion was facilitated regarding how often each patient participates in each task. Beliefs, values, and barriers to self-care were explored.

PARTICIPATION: SM actively participated by completing the worksheet and in the group discussion.

No evidence of suicidal ideation, homicidal ideation, plan or intent noted. Next session is scheduled for Tuesday 9/5/17.

A/P Last updated by POURZAND, MIRIAM @ 30 Aug 2017 1359 EDT

1. Generalized anxiety disorder: 32 year old single Caucasian male United States Navy E5, TIS 12 yrs, duty assignment Ft. Meade intel lost access one month ago, currently working in admin. Reports childhood problems primarily related to his father. Reports in 2008 relationship problems, and in 2012 sought behavioral health care for job and relationship stress. Additionally has hx of alcohol use d/o requiring inpatient detox. Sm reports anxiety disorder to impair daily functioning, reports poor coping continues

with trichotillomania. Sm presents for additional support and to learn and implement safe/ Positive coping mechanisms.

Competency/Risk:

At the present time, this patient is considered fully competent to be discharged to own custody and does not constitute an acute danger to self or others.

Treatment Plan:

The patient has been educated on various treatment modalities for depression/anxiety/PTSD including individual psychotherapy, group psychotherapy, and medication management.

Medications have been reviewed and reconciliation completed. Potential adverse side effects including suicide risk, worse clinical condition, sexual dysfunction, involuntary movements and weight gain have been discussed. The patient has acknowledged this information and indicated agreement with the proposed treatment based on the potential benefits, limitations and risks.

Procedure(s): -Psychiatric Therapy Group Interview x 2 ADDITIONAL PROVIDER(S): PRATT,NARCEDALIA

Disposition Written by POURZAND,MIRIAM @ 30 Aug 2017 1400 EDT**Released w/o Limitations**

Follow up: 1 day(s) in the PSYCH DAY HOSP BE clinic or sooner if there are problems. - Comments: The patient agrees to seek treatment at or call the NMMC Emergency Room (301) 295-4810/11 should there be a significant worsening in symptoms, intense distress, or thoughts about harming self or others.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. 120 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

He reported: Encounter Background Information: MORNING GROUP THERAPY SUMMARY NOTE 0730-1100: HCPCS CODE S9480:
INTENSIVE OUTPATIENT PROGRAM (IOP)-PSYCHIATRIC SERVICES: This HCPCS code issued per MHS and MEDCOM IOP guidance to capture RVU credit for all group therapy services provided in the morning. The first half of this daily IOP program is comprised of a full morning program from 0730 to 1130.

S/O Note Written by LOWENSTEIN, HELEN T @ 29 Aug 2017 1143 EDT

History of present illness

The Patient is a 32 year old male.
He reported: Encounter Background Information: Distress Tolerance Group 1000-1050 facilitated by Ms. Helen Lowenstein LCSW.
Purpose: To teach patients skills to identify potential distressing events and to teach them to manage negative emotions/negative experiences without exacerbation of a perceived crisis. Patients will also be encouraged to become aware of ways they escape severe emotional pain through destructive behaviors and/or relationships. Time will also be spent helping patients learn to tolerate the distress.
Topic: Patients were provided a hand out titled Things that influence Stress Tolerance Level. It listed five categories: Support network, sense of control (internal vs external), attitude and outlook, ability to deal with your emotions (Recognition and recovery), and Knowledge and preparation. The patients were asked to identify ones they have been utilizing in their life already for positive coping, and areas they may need to incorporate. Patients went around the room and shared what they have been or need to start to do and what areas cause them more distress than others. This is to help empower patients that they may have or will have a tool box of coping skills to pull from when in distress and adopt healthier coping patterns and behaviors.
PARTICIPATION: PT was an active throughout the group. PT shared that having set routines is helpful for him with feeling in control and goals. No evidence of SI/HI. Next group to meet 09/05/17 at 1000.

SUBSTANCE USE AND TREATMENT HISTORY

Tobacco and other Nicotine products: denies

Alcohol: Patient currently seen at ATS at WRNMMC. Pt admits to alcohol consumption starting in Middle School. Pt has already had significant alcohol treatment including inpatient at Ft. Belvoir.

Caffeine: Pt denies recent consumption of coffee or other stimulants.

Illicit / prescription drug abuse: denies

SOCIAL / DEVELOPMENTAL / SPIRITUAL HISTORY

Pt is 32 yo single Caucasian male with almost 12 yrs TIS, Navy E-5 (recently demoted from E-6), MOS cyber security. Pt reports that he was born in California to very young, unmarried parents, who later married and then divorced. Pt reports that he has 2 sisters, who are ages 30 and 29. He also has a half brother, and half sister who he does not have contact with. Pt reports that father had custody for most of childhood, and mother had to pay support. Both parents were physically abusive. Father was on welfare and frequently negligent of his parental duties. Pt states that father's excessive discipline was to make them fearful. Pt reports 2 incidents of sexual trauma from unwanted contact. Once by older cousin and another time in middle school with friend grabbing him. Pt was moved numerous times during childhood. Pt said that there were times when he was living in a ghetto due to father living off welfare and spending all their money. Pt appears to currently have emotional support from mother and sisters. He has a very contentious relationship with father, thus recently changing his name. Pt said that he barely passed high school, and had a 2.2 GPA. He attributes this to his struggle with IBS, excessive running schedule and not doing homework. He joined the Navy immediately following high school. He has difficulty with relationships and is not currently in one. He denies religious affiliation.

LEGAL / DISCIPLINARY / FINANCIAL / OTHER STRESSORS & PROBLEMS

Pt reports recent demotion due to accusation of social media harassment of another SM. Pt also admits to serious financial debt due to excessive spending.

SEXUAL HISTORY

Pt reports history of hypersexuality, but reports Effexor is currently helpful with this. He states that he does not like being touched in certain ways and has trouble emotionally connecting with partners.

S/O Note Written by CLOPPER, TAMMY J @ 30 Aug 2017 1414 EDTChief complaint

The Chief Complaint is:

Continued stress and anxiety.

Reason for Visit

NEW EVALUATION.

The Patient was seen by a staff member.

(0900-1000): Present at intake: Dr. Pourzand, Mrs. Donkin, LCSW-C, Ms. Buford, RN.

General overall feeling - Fair.

Difficulty doing work, taking care of things at home, or getting along with other people - Very difficult.

Limits of confidentiality reviewed with the patient who verbally expressed an understanding, signature was obtained. (See [Add Note] for any scanned in documents.)

Referred here

Appointment is voluntary.

....

Patient was not escorted.

Referred here by - Other.

Source of information was self.

History of present illness

The Patient is a 32 year old male.

<<Note accomplished in the TSWF BH Spec AIM form>>

HISTORY OF PRESENT ILLNESS:

Pt is a 32 y/o single Caucasian male ADN E5 with almost 12 years TIS, HDS: Ft. Meade, MOS: Network Intelligence, referred to PCS by outpatient provider at WRNMMC d/t continued symptoms of anxiety and depression. SM reports he has not worked in one month, has lost access to the building, and was demoted from E6 to E5 in 7/2017 d/t social media sexual harassment sent to a female co-worker. SM reports having anxiety symptoms as far back as childhood d/t his father. In 2008, SM started picking his scalp (neurotic excoriation) while deployed aboard a ship d/t stress and anxiety. SM also developed MRSA. SM reports in 2010 he had a bad 2 year relationship breakup with a woman whom was an alcoholic and taking medication. SM states in 2012 he started seeing behavioral health d/t having suicidal ideation, being discontent with life, and the bad breakup. SM endorses guilt, decreased appetite and fear of gaining weight and losing 10 lbs. in the last month (stating he does not want to look like his father as well as end up with diabetes as he has), states feels as though he has sleep paralysis and at times sleeps too much but other times difficulty falling and staying asleep, +anxiety and worrying, reports being hypersexual stating he could have intercourse daily as well as ejaculate three times a day, +anger/irritability, +isolation, states does not like sun exposure, fantasizes about life-space things, watches television a lot which in turn creates increased anxiety (example: watches Game of Thrones and Walking dead but does not look at it as just a TV show, fantasizes that it is real). SM states he works on computer gaming and enjoys cooking. Reports he was in debt for \$35,000 but sold one of his homes and now debt has decreased to \$19,000. States his debt was from buying his brother a car and giving his family money. SM denies AVH and OCD.

ADDITIONAL HPI

SM has no religious preference. SM was deployed near Japan on a ship from 3/2006-4/2009 denying combat exposure and stating he felt safe. SM reports fleeting SI with no plan/intent, currently denying active SI/HI. SM to attend both IOP/CRP programs.

PHYSICAL PAIN SEVERITY 3/ 10.

PAIN ASSESSMENT

S/O Note Written by HANGEMANOLE, DESPINA C @ 22 Aug 2017 1004 EDT

History of present illness

The Patient is a 32 year old male.

Focus Of Session: Realizations

S) SM reported that he wanted to drink on Friday due to stress from command. He stated that command had a legal representative notify him that they were counting his referral as a command referral and he was at risk for administrative separation due to this being his second referral. Treatment failure processes were reviewed with SM who acknowledged understanding. SM stated he would prefer to continue treatment at WR ATS as opposed to transferring to WNY SARP due to continuity of care and integration of care. SM stated that he went home on Friday and watched a movie and the cravings dissipated. SM discussed his weight loss, decrease in IBS symptoms and financial gains since he quit drinking. SM also stated he is developing a closer relationship with his family now that he is sober. SM reported that he did not go to a meeting last week but committed to attending one this week. SM also stated he would begin making a gratitude list daily to see if this helped to ground him in the present in order to decrease his anxiety. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative and friendly. SM appears to have significant mental health issues that would be best addressed through PCS IOP. SM would benefit from continuing to engage in community recovery.

Alcohol Use D/O, Severe

P) Case will be reviewed with treatment team. SM will follow up with social worker in three weeks.

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used:** CBT**Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he continues to have issues with his command and is concerned about returning to the environment post IOP. He stated that he learned that his department had an all-hands meeting regarding him and why his clearance was removed. He feels that other sailors now have a negative impression of him and has noticed that they interact with him differently. Therapist and patient processed his feelings about this. Patient stated that he has been working on socializing and getting out of his home. Patient relayed recent outings. Therapist expressed concern regarding an outing that patient had with another sailor. Therapist encouraged patient to be mindful of social interactions with others in his department related to all the concerns they've had about his boundaries and behavior. Patient agreed that this was not a positive outlet for socialization. Further conversation focused on patient's re-investment into his family relationships. He stated that he is working on trying to build normal healthy relationships even though he does not feel innately warm and secure in these relationships. Therapist and patient discussed how to balance internal growth and relationship growth. Patient is identifying future oriented plans. Patient has no suicidal plan or intent but fleeting ideation. Patient will start IOP next week.

Response to treatment: ☐ None ☒ Some ☐ Significant ☐ Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal

Created: 30 Oct 2017

ASSESSMENT**Diagnosis:**

Axis I: Generalized Anxiety Disorder

Major Depressive Disorder, Single Episode, Moderate

Alcohol Abuse Disorder

Axis II: Diagnosis deferred on Axis II

Axis III: Deferred

Axis IV: Financial stress, lack of social support, occupational/legal stressors

Axis V: 60

Prognosis: () Excellent (X) Good () Fair () Guarded () Poor**Patient's capacity** to participate in and benefit from therapy is evidenced by:

(X) good insight/judgment, (X) a desire to resolve their disorder, (X) verbal agreement to the treatment plan

Safety Risk:*Non-Modifiable Factors:*

Gender (risk factor if male):	Yes
H/O Suicide Attempts:	Yes – twice in adolescence
Organized Plan:	No
Chronic Psychiatric Disorder:	Yes
Recent Psychiatric Hospitalization:	No
H/O Abuse or Trauma:	Yes – sexual abuse as a child
Chronic Physical Illness:	No
Family H/O Suicide/Attempts:	Yes – both sisters have attempted
Other Recent Loss:	No
Chronic Pain:	No
Age (risk factor if <25 or >60):	No

Modifiable:

Suicidal Ideation/Plans/Intent:	Yes- intermittent fleeting thoughts
Suicide Preparatory Behavior:	No
Access to Lethal Means:	No
Poor Treatment Compliance:	No
Hopelessness:	Yes
Psychic Pain/Anxiety:	Yes
Acute Event:	No
Insomnia:	No
Low Self-Worth:	No
Impulsivity:	Yes
Substance Abuse:	Yes, previously
Financial Stress:	Yes
Legal Stress:	Yes

Protective:

Strong Therapeutic Alliance:	Yes
Positive Coping Skills:	Yes
Responsible to/for Family:	No
Responsible to/for Pet:	
Frustration Tolerance	Limited
Resilience:	Yes
Good Reality Testing:	Yes
Amenable to Treatment:	Yes

Harm to Others: **(X) Not Elevated** () Low () Intermediate () High

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 13 June 2017

Reviewed with patient on: 13 June 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would **NOT** like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

S/O Note Written by DELEON,PATRICK D. @ 16 Aug 2017 1130 EDT**History of present illness**

The Patient is a 32 year old male.

S: Individual follow-up session with this SW as SM's primary ATS counselor Ms. Hangemanole is on leave this week. SM reports ongoing sobriety, acknowledges occasional thoughts of drinking but able to abstain and expressed pride that he has more than a month of sobriety. SM reports recent weight loss which he's pleased with, entirely due to stopping alcohol and caffeine as he reports his IBS prevents him from exercising and he hasn't significantly changed his diet. SM discussed fleeting passive suicidal thoughts, not presently having them and convincingly able to assure of his safety and no intent to act on them. SM reports they are generally sparked by existential questions about finding meaning and purpose in life, more recently connected to thinking about what he'll do after the Navy, discussed both the excitement but primarily the fear that comes with the idea that he could study a new field, could do anything, and this is both a great opportunity and overwhelming. SM reports increased isolation, stemming from two people in recovery who relapsed following a breakup or tension with SM, which he rationally recognizes is not his fault but nevertheless lessens his motivation to connect with others.

O: Client arrived on time to session. Alert and oriented x 3.

Appearance: Appropriate

Behavior: Appropriate

Speech: Within Normal Limits

Thoughts: Logical, linear, goal-directed

Mood: Depressed

Affect: Congruent

Insight: Fair

Judgment: Fair

SI/HI: Convincingly denied

Med/Pain Issues: Irritable Bowel Syndrome

A: SM reports significant depressive symptoms, appears motivated to maintain sobriety

P: Next individual session w/ Ms. Hangemanole 22 Aug, start PCS 29 Aug.

S/O Note Written by HANGEMANOLE, DESPINA C @ 10 Aug 2017 0742 EDT**History of present illness**

The Patient is a 32 year old male.

Focus Of Session: Depressive Symptoms

S) SM reported that he spent the weekend watching movies and sleeping. SM stated that he did talk with his sister and his mother and examined with them some of the reasons for living. SM stated he has hopes of moving down to where they live and buying a plot of land to live on together. SM stated that his MEB is moving forward for his IBS. SM denied having an intake date with PCS right now. SM reported that he is still depressed and often thinks about his reasons for living. SM reported he went to one AA meeting but didn't really like it because there was "drama" and he didn't feel he got anything out of it. SM reported that he was triggered to drink one time after hearing people talk about craft beer on the radio. SM stated that he turned the radio off and the feeling passed. He stated that he thought about suicide over the weekend but did not have a plan or intent to harm himself. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative and friendly. SM appears to have significant mental health issues that would be best addressed through PCS IOP. SM would benefit from continuing to engage in community recovery.

Alcohol Use D/O, Severe

P) Case will be reviewed with treatment team. SM will follow up with social worker in two weeks.

Overall health reported as: Good

Pain Level (0-10): 0

Currently treated: not answered

Suicidal Ideation Risk - C-SSRS score: 5 Past/Prep Behavior: Yes

past attempts: 3 (as of 09/06/2016)

Harm Others Risk over next week as of 9/6/2016 - None

Active Plan: N/A

Patient with access to weapons: No

Notes from current session:

Patient presents for follow-up appt. At our last meeting last week we increased Effexor xr to 150mg every morning for mood and anxiety. Pt says today he thinks the dose increase is helpful for his IBS symptoms. He isn't sure about impact on anxiety. We discussed that has not been on for long. He remains abstinent from alcohol and coffee and is participating in ATS program. HE has not had his sleep study yet. Review normal B12 lab. He is not having suicidal thoughts.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported**Depression** - PHQ2: 2 - Depressive Syndrome Unlikely

PHQ9: 13 - Minor depressive symptoms reported. Evaluation indicated.

Thoughts that you would be better off dead, or of hurting yourself in some way

Few or several days

Anxiety - GAD 2: 5 - Anxiety Syndrome Possible, see GAD7

GAD 7: 15 - Moderate anxiety symptoms reported. Evaluation indicated.

PTSD - 4QPTSD: 3 - PTSD possible, see PCL. Evaluation indicated

PCL-5: 37 - Some PTSD symptoms reported

ALCOHOL - AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT

AUDIT: 13 - Harmful or Hazardous Alcohol Consumption likely

 IN LIQUID. AFTER TWO WEEKS INCREASE TO TWICE EVERY DAY 3 Active 10 May
 2017@0001

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)
 Asthma during childhood
 Allergic response to pets
 Recurrent intestinal pain (possibly lactose intolerance)
 PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4
 Tobacco/e-cigs: none PPD Equivalent:
 Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.
 Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure
 Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)
 Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None
 Patient denies treatment team needs to be aware of specific ethnic/cultural issues.
 Learns best by: Pictures. Learning is adversely affected by: None.
 Patient would not like family members involved in care.
 Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in uniform.
 Behavior/Orientation: Polite, and cooperative.
 Abnormal Movements: normal gait. No abnormal movements apparent.
 Rapport: fair
 Speech: talkative
 Mood: anxious
 Affect: full
 Thought Process: somewhat circumstantial
 Thought Content: denies current suicidal intent/HI/AVH
 Judgment: fair
 Insight: fair
 Impulsivity: none at time of interview
 Cognition: grossly intact
 Fund of Knowledge: wnl

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High
Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; r/o adjustment disorder with depressed mood ; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will continue medication

Intervention: continue Effexor to 150 mg po qam, as family members had good response to this medication. Monitor for emergence of manic symptoms. Counseled pt on risks/benefits and he consented to treatment.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Problem #3: alcohol use

Goal: pt will minimize alcohol use/stop drinking

Objective: pt will refrain from alcohol use

Intervention: continue naltrexone 50 mg po daily. continue. have discussed adverse effects of alcohol on mood and sleep. Will be referred for sleep study in July. Normal b12 panel drawn after July 2017 visit.

Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: [] Excellent [] Good [] Fair [] Guarded [] Poor

Follow-up: three weeks

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

S/O Note Written by LINKER, MARTIN R @ 07 Aug 2017 1718 EDT**Chief complaint**

The Chief Complaint is: Follow up on irritable bowel syndrome.

History of present illness

The Patient is a 32 year old male.

32 m presents today in follow up to IBS. Patient states he is currently having a flare.

Alert and oriented x 3 with no signs of distress. Vital signs within normal limits. No complaints of nausea vomiting diarrhea.

<<Note accomplished in TSWF-CORE>>

Spasms today. Expects unscheduled bowel movements today. States he does not eat much because he has abdominal cramps and diarrhea when the products of digestion reach and are in his colon. But also states that he eats enough to maintain his weight. He is unsure whether or not he is making psychological progress. Continues to participate in BH visits. Taking same dose of venlafaxine. No nausea. Unclear when intensive outpatient treatment will begin. Discussed writing of a letter to amend or clarify NAVMED 6100/5 in order to excuse him from company-level PT and allow him to participate in PT at his own pace. Spoke last week with gastroenterologist and with psychiatrist. Patient is to make follow-up appointment in GI Clinic. His BH follow-up visits are scheduled. Not drinking.

Discussed many issues. Has good insight. Calmer. Less despondent.

Bloating, abdominal pain, and diarrhea.

Anxiety, emotional lability, depression, sleep disturbances ...Thinks that he sleeps too much..., and decreased functioning ability.

Visit is not deployment-related.

Pain assessment

Location: stomach

Duration: intermittent

Quality: spasm

Pain Severity 3/10.

Patient IS NOT currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Patient reports that they are compliant with medications.

Patient has NOT received other care since their last visit with this clinic.

The Patient is a 32 year old male.
 Focus Of Session: Passive Suicidal Ideation
 S) SM reported that he spent the weekend watching movies and sleeping. SM stated that he found himself wanting to sleep the weekend away to pass the time. SM reported that he has been feeling depressed and hopeless. He stated that he thought about suicide over the weekend but did not have a plan or intent to harm himself. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.
 O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.
 A) SM was cooperative and friendly. SM appears to have significant mental health issues that would be best addressed through PCS IOP.
 Alcohol Use D/O, Severe
 P) Case will be reviewed with treatment team. SM will follow up with social worker next week.

Trauma: N/A
WTU: N/A
MEB in progress: N/A
AdmSep in progress: N/A
Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

Medical Record

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: CBT****Pain: 0/10**

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he decided not to pursue a court marital and instead accepted an NJP which resulted in loss of rank and half month's pay. Therapist and patient processed his feelings about the results. He stated that he's glad that they don't want to "kick me out" and knows that he has an opportunity to regain rank should he not be medically separated. Patient stated that he wrote a personal statement which he provided to his CO and read to his command. Patient read this in session. Patient stated that he wanted his command to know where he was coming from and provide context. Therapist provided positive reinforcement for this. Patient stated that he is focusing on next steps for care and recovery from the past several months. Patient has no suicidal plan or intent but fleeting ideation.

Response to treatment: [] None [X] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: (X) Outpatient () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 13 June 2017

Reviewed with patient on: 13 June 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would NOT like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

S/O Note Written by LINKER, MARTIN R @ 27 Jul 2017 1813 EDT**Chief complaint**

The Chief Complaint is: Anxiety. Depression.

History of present illness

The Patient is a 32 year old male.

<<Note accomplished in TSWF-CORE>>

Has IBS-D. Triggers include certain foods (high FODMAPS), eating at certain times (breakfast time more so than lunch time) certain smells (e.g., perfume), physical activity, anxiety, stress.

Stools vary. Can have temporally closely spaced multiple stools. Lots of abdominal cramping preceeding bowel movements. Sometimes feels like he should go to the ED because of severe cramping pain. Has been evaluated in GI Clinic and given various treatments, all of which he states were unhelpful. Last GI Clinic visit cited in AHLTA was on 13 April 2017.

Has lots of stress and anxiety.

Taking venlafaxine. Was taking 75 mg daily. Dose increased today to 150 mg. Venlafaxine caused nausea. Nausea now resolved.

IOP planned – start date not clarified.

Recent lost access to the building that he was working in. Now performs analysis on a computer – lower stress. Recent reduction in pay grade. His mother and sisters live in SC, and he thinks that he will be better mentally if he were in SC and could develop his relationship with them.

Excellent general overall feeling /health.

Gastrointestinal symptoms See HPI.

Psychological symptoms See HPI.

Notes from current session:

Patient presents for follow-up appt. At our last meeting last week we increased Effexor xr to 75mg every morning for mood and anxiety as pt reported increasing distress surrounding facing a DRB the week of July 3rd for charges of allegedly sexually harassing a coworker. Pt says today he thinks the dose increase is helpful for his IBS symptoms. He isn't sure about impact on anxiety. We discussed that he is still on a low dose and hasn't been on it for long. HE is having trouble sleeping and is taking unisom at night but still struggles with sleep maintenance. He feels tired all the time. HE has been abstinent from alcohol for 18 days and is not drinking caffeine. He had an intake with ATS and is doing breathalyzers. HE decided not to challenge his NJP and has been reduced in rank to E5. HE is not having suicidal thoughts.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported**Depression** - PHQ2: 2 - Depressive Syndrome Unlikely

PHQ9: 13 - Minor depressive symptoms reported. Evaluation indicated.

Thoughts that you would be better off dead, or of hurting yourself in some way

Few or several days

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Dentes self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)
Asthma during childhood
Allergic response to pets
Recurrent intestinal pain (possibly lactose intolerance)
PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure
 Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)
 Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None
 Patient denies treatment team needs to be aware of specific ethnic/cultural issues.
 Learns best by: Pictures. Learning is adversely affected by: None.
 Patient would not like family members involved in care.
 Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in uniform.
 Behavior/Orientation: Polite, and cooperative.
 Abnormal Movements: normal gait. No abnormal movements apparent.
 Rapport: pt more guarded today
 Speech: constricted
 Mood: dysphoric
 Affect: constricted
 Thought Process: focused on MEB referral
 Thought Content: denies current suicidal intent/HI/AVH
 Judgment: fair
 Insight: fair
 Impulsivity: none at time of interview
 Cognition: grossly intact
 Fund of Knowledge: wnl

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; r/o adjustment disorder with depressed mood ; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will continue medication

Intervention: increase Effexor xr to 150 mg po qam, as family members had good response to this medication. Monitor for emergence of manic symptoms. Counseled pt on risks/benefits and he consented to treatment.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.
 Measure: self report

Problem #3: alcohol use

Goal: pt will minimize alcohol use/stop drinking

Objective: pt will refrain from alcohol use

Intervention: continue naltrexone 50 mg po daily. Again discussed ATS referral which pt agreed to today. have discussed adverse effects of alcohol on mood and sleep. Will refer for sleep study. Orderd b12 panel.

Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

☐ good insight/judgment, ☒ a desire to resolve their disorder, ☒ verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: ☐ Excellent ☐ Good ☐ Fair ☐ Guarded ☐ Poor

Follow-up: three weeks

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

S/O Note Written by HANGEMANOLE, DESPINA C @ 25 Jul 2017 1155 EDT**History of present illness**

The Patient is a 32 year old male.

Focus Of Session: Intake Assessment

S) SM and this writer completed intake assessment. SM acknowledged that he understood the evaluation process and levels of care. SM reviewed alcohol use history. SM reported that he was referred after disclosing to his BH provider that he was drinking on medications. SM stated he isn't sure if he has an alcohol problem, despite being in treatment before. SM reported abuse of asthma inhaler while in high school and use of marijuana one time while in high school. SM reported some pain related to IBS. SM denied current SI/HI.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative during assessment. SM appears ambivalent about treatment related to his AUD. SM seems to be more comfortable relating his alcohol use to his depression and anxiety, and may not see it as a standalone issue.

Alcohol Use D/O, Severe

P) Case will be reviewed with treatment team. SM will follow up with social worker next week.

A/P Last Updated by HANGEMANOLE, DESPINA C @ 25 Jul 2017 1125 EDT**1. Alcohol dependence, uncomplicated**

S/O Note Written by DELSESTO, BARBARA SUE @ 20 Jul 2017 1344 EDT**Reason for Visit**

Visit for: Case Management. Spoke with this patient and his Commander- CDR Yusko:443-479-6067. Discussed the referral to WRNMMC's IOP. The patient had a start date for 7 August but the Commander is requesting a start date for after the Labor Day holiday so the legal issues for this patient can be worked out. CM notified Ms. Lisa Bank-Williams at the PCS clinic to request a new start date. Will let the patient know when it can be scheduled.

History of present illness

The Patient is a 32 year old male.

He reported: Military service Profile Type: Patient was recently placed on LIMDU for IBS and GAD. MEB was recommended by the PCM. Paperwork taken to bldg 17 to the MEB office and MEB set to proceed. His Commander was given a copy of the LIMDU.

Discussed the IOP program with the Commander and recommended that the patient be allowed to attend. Spoke with patient regarding his legal issues and he will schedule a time to talk with the Commander about the process. CM information provided to all parties and will keep working with both to get patient into the IOP and provide support through his legal issue.

Behavioral Health Vitals (patient reported):

Overall health reported as: Good

Pain Level (0-10): 0

Currently treated: not answered

Suicidal Ideation Risk - C-SSRS score: 5 Past/Prep Behavior: Yes

past attempts: 3 (as of 09/06/2016)

Harm Others Risk over next week as of 9/6/2016 - None

Active Plan: N/A

Patient with access to weapons: No

Notes from current session:

Patient presents for follow-up appt. At our last meeting last week we started Effexor xr 37.5 mg every morning for mood and anxiety as pt reported increasing distress surrounding facing a DRB the week of July 3rd for charges of allegedly sexually harassing a coworker. Pt says he sent her pictures of himself with his dogs without his shirt on, and of his dogs licking a piece of meat, and that this was misconstrued to be sexually suggestive. Pt says today he has been having stomach upset and hasn't noticed an impact from the Effexor yet. We discussed it is too early for it to have an impact and right now we are gradually tapering it up to a therapeutic dose to ensure tolerability. He states he has been sober 9 days. HE has had some suicidal ideation without intent because he says his plan would be too expensive (buying a helium vent and gassing himself on helium). He continues to take naltrexone and thinks it is helpful for reducing alcohol use and maybe even his mood. His command wanted to NJP him and reduce him in rank to E-5, which he refused. He states they told him others find him narcissistic and hard to interact with. They told him he was 'unsalvageable'. Pt is consulting with a lawyer. Command states they are going to ad sep him under a general discharge. Pt wants to get out of the Navy but he wants an MEB. He took the limdu Dr Paul wrote and gave it to his PCM, who incorporated it into an MEB referral for that and IBS. I advised pt the Convening Authority for Behavioral Health, CDR Carr, contacted me about it as no behavioral health provider had signed it. I advised pt I agree with limdu referral but not MEB referral at this point as I don't believe he has exhausted all options for treatment; for example he is starting IOP on 07AUG. Pt voiced disappointment but said he would talk to PCM about resubmitting form. HE denies current suicidal intent.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruzska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he

owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported

Depression - PHQ2: 2 - Depressive Syndrome Unlikely

PHQ9: 13 - Minor depressive symptoms reported. Evaluation indicated.

Thoughts that you would be better off dead, or of hurting yourself in some way

Few or several days

Anxiety - GAD 2: 5 - Anxiety Syndrome Possible, see GAD7

GAD 7: 15 - Moderate anxiety symptoms reported. Evaluation indicated.

PTSD - 4QPTSD: 3 - PTSD possible, see PCL. Evaluation indicated

PCL-5: 37 - Some PTSD symptoms reported

ALCOHOL - AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT

AUDIT: 13 - Harmful or Hazardous Alcohol Consumption likely

RELATIONSHIP ISSUES - CSI - Pt reports no significant other - no score

SLEEP ISSUES:

Average hours of sleep per night: 6-7 Snore: No

Average sleep latency: 0-15min

Daytime Somnolence: Yes

OTHER - BAM: Risk/Protection/Use (subscales):

TBI/CONCUSSION SCREEN: Negative Screen

Rating scales:

28SEP16 phq9= 11 (#9=1); gad7= 16

24OCT16 phq9= 8 (#9=0); gad7= 12

05DEC16 phq9= 13 (#9=0); gad7= 8

04JAN17 phq9= 16 (#9=0); gad7= 14

01MAR17 phq9= 9 (#9=0); gad7= 10

11JUL17 phq9= 18 (#9=2); gad7= 18

19JUL17 phq9= 20 (#9=1); gad7= 18

Risk Assessment:

C-SSRS Baseline (9/6/2016): 5 - Lifetime thoughts of suicide with plan or actual behavior endorsed.

Over lifetime, Wish to be Dead?

Yes

Over lifetime, Suicidal Thoughts?

Yes

Over lifetime, Suicidal Thoughts with Method?

Yes

Over lifetime, Suicidal Intent?

Yes

Over lifetime, Suicide Intent with Specific Plan?

Yes

Over lifetime, Suicide Behavior?

Yes

Number of events: 3

Most recent Suicidal Thoughts/Behaviors?

1-3 months ago

Suicidal Thoughts Duration?

Less than 1 hour

Suicidal Thought Frequency?

Less than once a week

C-SSRS Current: not taken

RISK FACTORS (Weaknesses): (also see patient reported issues above in vitals)

☒ Male

☐ History of family/friend suicide

☐ Chronic medical conditions

☒ Impulsivity

☒ History of abuse

☐ Chronic pain

PROTECTIVE FACTORS (Strengths):

- ☐ Married, children ☒ Active treatment engagement
☐ Good coping/problem solving skills ☒ Hopefulness present
☐ Faith/religion commitment ☐ Positive future orientation

Allergies: nkda**Medications:** none**Past Behavioral Health History:**

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes

Cups/Day Equivalent: 4

Tobacco/e-cigs: none

PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High
 Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; r/o adjustment disorder with depressed mood ; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will continue medication

Intervention: increase Effexor xr to 75 mg po qam, as family members had good response to this medication. Monitor for emergence of manic symptoms. Counseled pt on risks/benefits and he consented to treatment.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

MEB in progress: N/A
AdmSep in progress: N/A
Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:

Treatment modality currently used: Treatment Planning

Pain: 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he received the results of the DRB and he chose to pursue a court martial as he did not want to admit wrong doing to the extent which was recorded. He acknowledged that his behavior may have had unintentional negative impact but he does not agree with the presentation of his behavior as malicious or himself as manipulative. Patient became very despondent that others thought of him that way. He stated that although he understands that he struggles with empathy and caring for others, he never purposely would harm anyone. He expressed stress at financial strain that an admin sep will place and the potential to lose medical coverage. Patient has no suicidal plan or intent but fleeting ideation.

Response to treatment: [] None [X] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

ABBREVIATED MEDICAL EVALUATION BOARD REPORT

SECTION 1: CLINICAL INFORMATION (TO BE COMPLETED BY MEDICAL OFFICERS)

Date: 7/13/17 Patient Name: Daniel Dennis Anderson Patient SSN: [REDACTED]
 Proposed start date for limited duty: 7/13/17 Proposed end date (< 6 months): 12/13/2017

This period of limited duty is for: (Select one)

- ☒ 1st LIMDU (< 6 months) Estimated ADSM (no referral to service headquarters necessary).
☐ 2nd LIMDU (< 6 months) Estimated ADSM (no referral to service headquarters necessary). Note that the first and second TLD periods cannot exceed 12 months cumulatively from the date of the first TLD period.
☐ 1st LIMDU (< 6 months) Officer ADSM (referral to service headquarters necessary).
☐ 2nd LIMDU (< 6 months) Officer ADSM (referral to service headquarters necessary).
☐ 3rd or subsequent LIMDU periods on Navy and Marine ADSM involving a distinctly different condition than that responsible for the first and second TLD periods (for referral to service headquarters for "dissemination review").
☒ Placement on LIMDU - if the patient is not already in a LIMDU status - at the same time the patient's case is referred to the physical evaluation board for adjudication.

Diagnosis: (1) IBS - D/P ICD-9 CM Code K57.0
 (2) GAD ICD-9 CM Code 296.32
 (3) MOD resistant med ICD-9 CM Code

Circumstances of Injury/Illness:

The patient is a 32-year-old male who has anxiety, depression, and combat-related PTSD. He has been on multiple medications and has been in the hospital for several weeks. He has been on a 30-day leave of absence from his unit. He has been on a 30-day leave of absence from his unit. He has been on a 30-day leave of absence from his unit.

Treatment plan:

He returned to ICD command health center for a multiple band. He is on a 30-day leave of absence from his unit. He has been on a 30-day leave of absence from his unit. He has been on a 30-day leave of absence from his unit.

SECTION 2: PATIENT INFORMATION (TO BE COMPLETED BY PATIENT)

I have received full information on the proposed Limited Duty period from my provider. I understand that this period of limited duty is not effective until approved by the MTF Commanding Authority, and that the MTF will report this LIMDU action to my parent command. I understand I may be returned to duty prior to the date appearing above as my clinical condition warrants and upon action by my standing provider.

Patient Signature/Date

SECTION 3: TO BE COMPLETED BY PATIENT ADMINISTRATION OFFICER/MEDICAL BOARD OFFICER

The following actions have been completed:

- ☐ Completion of Patient Information Sheet
☐ Notification to PCS/Personnel Office
☐ LODD Requested from Parent Command (if LODD required)
☐ Entry into MedBOLTT
☐ Briefing to Patient on Limited Duty/MEB
☐ Notification to MTF LIMDU Coordinator
☐ Notification to Parent Command

Review of systems

Systemic: No systemic symptoms, no generalized pain, and not feeling tired (fatigue). No fever, no chills, no night sweats, no recent weight loss, and no recent weight gain.
Head: No headache.
Otolaryngeal: No earache, no nasal discharge, no nasal passage blockage (stiffness), and no sore throat.
Cardiovascular: No chest pain or discomfort.
Pulmonary: No dyspnea and no cough.
Gastrointestinal: No nausea, no vomiting, no bright red blood per rectum, and no constipation.
Genitourinary: No change in urinary frequency and no feelings of urinary urgency. No dysuria.
Musculoskeletal: No back pain.
Neurological: No lightheadedness.
 The patient or patient's sexual partner HAS NOT traveled to a Zika affected area in the past 6 months and DO NOT plan to in the future.
 Patient is NOT pregnant and DOES NOT plan to conceive in the next 6 months.
 The patient HAS NOT traveled outside of the country in the past 90 days.
 The patient DID NOT experience illness during the trip.

Practice Management

Patient engages in 150 minutes of moderate intensity exercise per week AND muscle strengthening activities 2 or more days per week.

S/O Note Written by THOMAS, LAUREN A @ 12 Jul 2017 0923 EDT**History of present illness**

The Patient is a 32 year old male.
The SM was referred for medical nutrition therapy for IBS-D. BMI=26., LDL-C=140 mg Trig=262. PMH=Anxiety, depression. Is currently under a medical board. The SM states that he has had GI problems for many years. Also has a family hx of high cholesterol. Has decreased intake of red meat from 3x-1x/week. Triglycerides are likely elevated due to excessive alcohol intake. The SM states he has not lost weight but in fact has gained weight but that maybe from drinking alcohol. He stopped drinking 3 days ago and also stopped caffeine intake then too. He reports following the low FODMAP diet 1 1/2 years ago. Stopped following it and also was not completely following it. Started following it again 5 weeks ago. He states it has helped his symptoms. He reports 1 Bm/day that is watery, painful. He states that garlic and onion bother him as do cruciferous vegetables. He stated that no matter what I eat, I feel pain, discomfort. Diet recall reveals the patient is following the low FODMAP diet but is eating bread products with gluten. He states he doesn't feel gluten bothers him. B: none or Glucerna shake L: 3-4 oz chicken breast, 1/2 cup brown rice, water S: Jello D: Chicken/ turkey, rice or turkey burger on a potato roll, water. Supplements: Centrum Silver, Fish Oil, Probiotic.

A/P Written by THOMAS, LAUREN A @ 12 Jul 2017 0934 EDT**1. Irritable bowel syndrome with diarrhea:** Nutrition Diagnosis: Altered GI function RT stress, excessive alcohol, depression AEB patient symptoms

Intervention #1:

1. Discussed 2nd phase of FODMAP diet which includes gradual addition of some foods from one food group
2. Discussed returning to low FODMAP before adding foods from another group
3. Recommended patient make an appointment with IHWS Mind-Body therapist to learn skills for stress reduction/relaxation/mediation

Barriers: Limited ability to exercise

Monitoring/Evaluation

Goals:

1. Add in 1/2 banana then see how symptoms are
 2. Add in another fruit from fruit group to assess tolerance
 3. Next add in grains in similar way
 4. Make an appt with Mind-Body therapist
 5. F/u recommended- patient declined
- Monitor symptoms with food journal
RD and clinic contact information given for follow-up, questions

Active Plan: N/A

Patient with access to weapons: No

Notes from current session:

Patient presents for acute ED follow-up appt after being referred to the ED on 06JUL for reporting suicidal thoughts to his command that day. Pt states he faced a DRB last week. He has been having legal trouble at his command for allegedly sexually harassing a coworker. Pt says he sent her pictures of himself with his dogs without his shirt on, and of his dogs licking a piece of meat, and that this was misconstrued to be sexually suggestive. Pt says he has been having increasing suicidal ideation over the past couple of months because of the legal situation. He started researching ways to kill himself on a website called helpme.org and thought about carbon monoxide poisoning or shooting himself with a shotgun, although he doesn't own one and denies plan to buy one. He says he told a coworker last week who told his command who referred him to ED, where he was evaluated and released to outpatient. Pt says he wouldn't act on these thoughts due to his family and sister. He says after stopping his medications (Lexapro, Lunesta and Naltrexone) around the beginning of May he became increasingly depressed and started drinking more, up to a liter and a half a week of vodka. He also drank up to 3 coffees per day. Pt states he thinks he felt better on medication and would like to go back on a medication for his mood. He states he stopped drinking alcohol two days ago. He learned more about his family psychiatric history since we last met, specifically that both grandparents are on venlafaxine and find it helpful for their mood. Grandmother also is on Risperdal for bipolar disorder. Pt reports when he is programming, watching TV or movies he finds they are an escape and he does not feel tired. However, he otherwise feels tired much of the time. He felt tired on past trials of SSRIs as well.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruzska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Allergies: nkda**Medications:** none**Past Behavioral Health History:**

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High
 Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will resume medication

Intervention: start Effexor xr 37.5 mg po qam with plan to increase to 75 mg poq am in one week if tolerated, as family members had good response to this medication. Monitor for emergence of manic symptoms. Counseled pt on risks/benefits and he consented to treatment.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will minimize alcohol use/stop drinking

Objective: pt will refrain from alcohol use

Intervention: restart naltrexone 25 mg po q day x 3 days, then increase to 50 mg po daily. Discussed ATS referral but he declines at this time. have discussed adverse effects of alcohol on mood and sleep

Measure: self-report, lab results

Care Coordination/Command Contact

S/O Note Written by DELSESTO, BARBARA SUE @ 10 Jul 2017 1133 EDT**Reason for Visit**

Visit for: Case Management. Patient was seen in the ED on 6 July and saw Dr. Paul this am at 0800. He was taken by his Command for a safety check/eval. He denies any safety concerns today. He will see his PCM for LIMDU paperwork and start the MEB process this week. Dr. Paul has written a temporary LIMDU for BH while patient continues to receive treatment. Both medical and BH conditions to be added to the permanent LIMDU.

History of present illness

The Patient is a 32 year old male.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Spoke with patient's Commander- CDR Yusko regarding the Intensive Outpatient Program in the PCS clinic. Confirmed date to start is 7 August. Informed Command that the program is M-F /0700-1500 for at least 4 weeks. She stated that she can NOT commit to support this treatment at this time. I requested that she get back to me in the next 2 weeks regarding this treatment. The patient is currently pending some legal action for misconduct and his anxiety is elevated. He reports his IBS is causing some pain, more trips to the bathroom daily and he is picking his scalp until he bleeds and has sores develop. I discussed with the Commander that this patient should be bringing the LIMDU paperwork this week and the MEB action does not stop the legal action. Advocated that patient attend this IOP and continue with treatment. His condition is exacerbated by the legal action and the conflict at work but his condition was noted and treated well before this legal action occurred. He feels that he has had a good service record and has 11 years TIS. He has sought treatment around his work schedule and has tried to remain fit for duty. His record supports a permanent LIMDU and the medical board process will decide his fitness for duty going forward.

 MEB in progress: N/A
 AdmSep in progress: N/A
 Special Clearance: Yes

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:

Treatment modality currently used: Treatment Planning

Pain: 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he completed his Disciplinary Review Board which was a stressful experience. Patient described feeling overwhelmed by the accusations and assumptions on his character. He expressed confusion that he had not been previously told about any inappropriate behavior and offered corrective instruction. Patient stated that anxiety and IBS symptoms have risen. He acknowledged the interrelated nature of the two conditions. Patient is working with CDR Del Sesto to follow up with getting support with his command on behavioral health issues. Patient's command has not provided IOP approval as of yet. Patient expressed anxiety about the future and outcome of his career. Therapist and patient worked on coping skills to manage anxiety/depression.

Response to treatment: ☐ None ☒ **Some** ☐ Significant ☐ Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

Patient Status: Outpatient		

Reason for Appointment: Written by WORKS, LINDSAY K @ 06 Jul 2017 2027 EDT
safety check**Note** Written by WORKS, LINDSAY K @ 06 Jul 2017 2027 EDT**Impression:**

32yo single Caucasian AD USN E6 male with past psychiatric history of GAD, MDD, Adj disorder who presented at the request of command for safety eval due to recent suicidal thoughts. Biologically, the patient self-discontinued his Lexapro a few months ago, with noticeable worsening of symptoms since discontinuing. He has a history of heavy alcohol use, but denies recent binge use. He suffers from poor sleep as well. Psychologically, the patient struggles with chronic depression and suicidality. He has poor coping skills and turns to alcohol for relief. He is isolative but engaged in treatment. He is at times impulsive, as evidenced by self-discontinuing effective medications. Socially, the patient has a couple of close friends which he trusts and confides in. He also has a good therapeutic relationship with his outpatient provider.

Risk factors include prior suicide attempts, mental illness, acute stressors of job/finance/relationship, and family history. Protective factors include future orientation, interest in treatment, help-seeking, no access to guns, roommate. Hospital admission was discussed with the patient at length. He refused admission at this time and does not require involuntary admission for safety as he is not currently suicidal or homicidal and is able to care for self. He is chronically suicidal and trusts his outpatient provider enough that he called her on his way in and she made an appointment on Monday.

Dx: GAD, Adjustment D/O

Recommendations/Plan:

- Patient to be discharged from ED with outpatient BH follow-up
- BH psychology apt on Monday 0800
- emailed WRNMMC BH staff to arrange for psychiatric follow-up within 1 week
- return to the ED or call 911 if suicidal thoughts worsen or if you feel unsafe

D/w Dr. Molchan- staff psychiatrist

-

HPI:

Patient presented to the ED at the request of command due to expressing suicidal thoughts yesterday. Patient reports he has chronic suicidal thoughts "off and on" and that last night he was having thoughts and was "sort of researching different ways online" and told this to a civilian co-worker. That co-worker was concerned and reported it to his command, who then sent the patient to the ED. On the way into the ED, the patient contacted his therapist and told

Medical Record

Created: 30 Oct 2017

her what was happening and she scheduled him for Monday 0800 appointment.

At the time of the evaluation, the patient denied any current suicidal thoughts. He stated that he was irritated that his friend reported him but understands that suicide is taken seriously. He denies that his thoughts are worse than usual but does admit that researching different ways is "not common but not rare". He denies any specific plan.

Yesterday the patient went before the DRB for misconduct and is facing separation or demotion as punishment. This was particularly upsetting to him and "stressed him out". He also self-discontinued his psychiatric medication (Lexapro) in April and since then has noticed an increase in depression and anxiety. He is interested in resuming the medication and would like to meet with his prior provider Dr. Tobar to discuss. The medication was stopped due to making him feel sleepy, but he feels the benefits out way the cost. Also, since being more stressed his IBS has increased which has caused more pain and has decreased appetite.

The DRB is in regards to accusations of sexual misconduct in regards to social media posts and conversations with a couple of female colleagues. The patient denies any misdoing.

Psych ROS

Depression: endorses poor sleep with early morning awakenings, guilt, hopeless and helpless at times, anhedonia (prior enjoyed gaming, less pleasure from it now). Chronic SI without plan or intent.

Anxiety: more anxious since stopping Lexapro, nervously picks at scalp to the point of having a bald patch. Endorses general anxiety, all day every day over small things.

Mania: denies

Psychosis: denies

PTSD: has thoughts of past abuse and at times feels uneasy around men, but denies overt avoidance/nightmares/flashbacks.

Psych History

Prior diagnosis: ETOH abuse, GAD, MDD

Prior suicide attempt: x2 in adolescence via alcohol and aspirin

Inpatient substance abuse treatment at ft. Belvoir April 2015

Currently in therapy and sees Dr. Tobar for medications.

Prior Lexapro 20mg qd, stopped in April

S/O Note Written by DELSESTO, BARBARA SUE @ 07 Jul 2017 1045 EDT**Reason for Visit**

Visit for: Case Management. Spoke with this patient regarding his referral to the Intensive Outpatient Program. I spoke with him about the situation at his unit-he is having some legal issues with his unit and is awaiting the outcome from this. He feels he is being mistreated by his Command and reached out to CM to talk with them about moving his duty assignment or a PCS LIMDU. The legal issues will need to be complete before he can PCS. CM to talk with his Commander about reducing this patient's stress level as it is making him more symptomatic with his IBS, anxiety, etc.

History of present illness

AdmSep in progress: N/A
Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

Notes from Today's Session:**Treatment modality currently used: Treatment Planning****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he has received negative feedback from his command regarding LimDu and IOP. Patient expressed concerns that they think he is "faking" his behavioral health issues in order to "get out of trouble". Patient stated that he is well aware that despite neutral intentions, his behavior towards others related to sexual harassment allegation had a negative impact on the women it was directed to. Patient stated that he has been trying to "keep things going" despite regular daily stressors from Navy demands negatively impacting his mental and physical health (IBS). He stated that he is recognizing that he cannot keep going forward without further injuring himself. Therapist noted that his previous notes indicated that he experienced significant stress deciding to re-enlist and shortly after felt that he made an error in returning to Navy stressors. Patient feels that Navy demands are detrimental to his behavioral and physical health. Patient is following up with potential MEB with other providers. Patient indicated impulsive drive to "turn in my badge" because he just wants to get out of the department. However, he is concerned about how this will impact him long term. Therapist provided patient with contact info for NCM CDR Del Sesto to discuss his current situation and receive support.

Response to treatment: [] None [**X**] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and

volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

ASSESSMENT**Diagnosis:**

Axis I: Generalized Anxiety Disorder
Alcohol Abuse Disorder
Axis II: Diagnosis deferred on Axis II
Axis III: Deferred
Axis IV: Financial stress, lack of social support
Axis V: 65

Prognosis: () Excellent (X) Good () Fair () Guarded () Poor

Patient's capacity to participate in and benefit from therapy is evidenced by:

(X) good insight/judgment, (X) a desire to resolve their disorder, (X) verbal agreement to the treatment plan

Safety Risk:**Non-Modifiable Factors:**

Gender (risk factor if male):	Yes
H/O Suicide Attempts:	Yes – twice in adolescence
Organized Plan:	No
Chronic Psychiatric Disorder:	Yes
Recent Psychiatric Hospitalization:	No
H/O Abuse or Trauma:	Yes – sexual abuse as a child
Chronic Physical Illness:	No
Family H/O Suicide/Attempts:	Yes – both sisters have attempted
Other Recent Loss:	No
Chronic Pain:	No
Age (risk factor if <25 or >60):	No

Modifiable:

Suicidal Ideation/Plans/Intent:	Yes- intermittent fleeting thoughts
Suicide Preparatory Behavior:	No
Access to Lethal Means:	No
Poor Treatment Compliance:	No
Hopelessness:	Yes
Psychic Pain/Anxiety:	Yes
Acute Event:	No
Insomnia:	No
Low Self-Worth:	No
Impulsivity:	Yes
Substance Abuse:	Yes, previously
Financial Stress:	Yes
Legal Stress:	No

Protective:

Strong Therapeutic Alliance:	Yes
Positive Coping Skills:	Yes
Responsible to/for Family:	No
Responsible to/for Pet:	

Medical Record

Frustration Tolerance Limited
 Resilience: Yes
 Good Reality Testing: Yes
 Amenable to Treatment: Yes
 Social Support: No
 Religious Beliefs Contrary to Suicide:

History of Harm to Others: No history of harm to others.

This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: () Not Elevated () Low **(X) Intermediate** () High

Harm to Others: **(X) Not Elevated** () Low () Intermediate () High

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 13 June 2017

Reviewed with patient on: 13 June 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Past medical/surgical history**Diagnoses:**

- No basal cell carcinoma of the skin
- No squamous cell carcinoma of the skin.
- No malignant melanoma of the skin

Personal history

Behavioral: No tobacco use.

Alcohol: Alcohol use.

Family history

- No malignant melanoma of the skin.

Physical findings**Vital Signs:**

Vital Signs/Measurements	Value
Pain level by numeric rating scale	0

General Appearance:

- ° Well developed. ° Well nourished. ° In no acute distress. ° Not acutely ill.

Neurological:

- ° Oriented to time, place, and person.

Skin:

- Skin: On exam the following lesions were identified and examined:
Multiple round subcutaneous cysts on the scrotum. • Complexion type II.

A/P Last Updated by DIBLASI, DANIEL R @ 21 Jun 2017 1540 EDT

1. **Epidermal cyst:** 32 y/o male with multiple EICs on the scrotum. 3 lesions excised. Patient tolerated the procedure. Follow up as needed.

Staffed with Dr. Fink

Procedure(s):

-Excision Of Lesion Trunk Benign Up to .5cm x 1 ADDITIONAL PROVIDER(S): FINK, CAITLIN M - Universal protocol was followed in compliance with WRNMMC standards. Patient's identification was checked (name and DOB). Procedure site(s) and side matches the consent form. The biopsy report and slide (if available) were reviewed. The site was marked and anesthetized with [2] mL of lidocaine 1% with epinephrine. The area was then prepped and draped in a sterile fashion. The lesions were then excised. Estimated blood loss was 1mL. Superficial skin opposition was achieved using 5-0 fast gut sutures. The wound was cleaned, Vaseline placed. Patient was instructed on wound care. The patient was instructed to return to clinic sooner for signs of symptoms of infection to include erythema, draining fluid or pain to palpation.

Lesion Management:
Initial size: [4]mm Margins: [0]mm Size of lesion with margins : [4]mm
Final length of incision [0.5]cm

Laboratory(ies):

-TISSUE EXAM (Routine) Ordered By: DIBLASI, DANIEL R Ordering Provider: DIBLASI, DANIEL ROBERT

 Patient Status: **Outpatient**

Date: **16 Jun 2017 0930 EDT**
 Clinic: **DERMATOLO CL BE**

Appt Type: **SPEC**
 Provider: **NICHOLAS,LUKE C**

Reason for Appointment:

Anogenital (venereal) warts

Appointment Comments:

MJ/IRMAC

S/O Note Written by DIBLASI,DANIEL ROBERT @ 16 Jun 2017 1154 EDT**Chief complaint**

The Chief Complaint is: Genital warts.

History of present illness

The Patient is a 32 year old male.

32 y/o male presents for evaluation/treatment of genital warts. Have been there for about 1 year. Has treated topically and with LN2 in the past and lesions have not resolved. Patient also c/o cysts on the scrotum.

In the Navy and currently on active duty.

No systemic symptoms, not feeling tired or poorly, no fever, and no chills. No skin symptoms - No skin symptoms other than described in the HPI.

Allergies

No known drug allergies.

Current medication

Current medications reviewed, confirmed and reconciled with patient.

Past medical/surgical history**Diagnoses:**

- No basal cell carcinoma of the skin
- No squamous cell carcinoma of the skin.
- No malignant melanoma of the skin

Personal history

Social history.

Physical findings**Vital Signs:**

Vital Signs/Measurements	Value
Pain level by numeric rating scale	0

General Appearance:

- ° Well developed. ° Well nourished. ° In no acute distress. ° Not acutely ill.

Neurological:

- ° Oriented to time, place, and person.

Skin:

- Skin:: On exam the following lesions were identified and examined:
 Small skin colored papules in the pubic region and on the proximal penile shaft
 Multiple round, subcutaneous cysts on the scrotum. • Complexion type II.

A/P Last Updated by DIBLASI,DANIEL R @ 16 Jun 2017 1247 EDT

1. Anogenital (venereal) warts: 32 y/o male with genital warts. Did not improve with topical or destructive therapies in the past. Recommended repeat treatment with LN2 and then regular follow up every 4-6 weeks for repeat treatment until clear. Patient verbalized understanding.

Seen and staffed with Dr. Nicholas

Procedure(s):

-Destruction Of Benign Lesion By Cryosurgery x 1 - After discussion of risks, benefits, and alternatives, verbal consent received, and cryo applied to lesions in standard fashion. Therapy was applied in a pulsed fashion to minimize collateral tissue injury. Patient was instructed to use Vaseline ointment to the area(s) until healed. Patient tolerated the procedure well and left in stable condition.

2. Epidermal cyst: Multiple scrotal EICs. Can schedule for excision. AHLTA and Outlook calendar unavailable at the time of encounter, so will contact patient to schedule.

Call Back Phone: [REDACTED]

S/O Note Written by PAUL, SHERIN @ 13 Jun 2017 1000 EDT**Subjective**

Provider was contacted by patient's command Chief Schooley regarding statements that patient made the previous day. Chief Schooley indicated that patient admitted to suicidal ideation and stated that the reason that he did not follow through with this was because he could not think of a painless way to die. Chief Schooley stated that the patient then followed up with stating that he was not thinking of hurting himself and no imminent risk was indicated. Chief Schooley indicated that he was concerned about the patient's safety. With expressed verbal permission of the patient, this provider indicated that patient had been seen this morning and screened for safety. Provider notified the caller that if in the future this or other sailors indicated suicidal harm, he has the option to recommend them for an immediate safety screen. Again with expressed verbal permission of the patient, this provider indicated that the patient will be placed on Limdu for behavioral health diagnoses. Further, patient is expected to start intensive outpatient program.

Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.

9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: Treatment Planning****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that since previous session he was provided more information regarding sexual harassment allegation against him. He expressed frustration that his actions were perceived negatively and no one talked to him about it in person. He stated that he never meant to hurt anyone or make anyone feel uncomfortable. However, he agreed that some of the engagement on social media seems inappropriate. Patient expressed frustration that he does not have a good understanding of social norms. He noted that he has been feeling suicidal related to increase in stress. Patient expressed concern about his well-being. He is amenable to intensive outpatient program and LimDu. Therapist and patient completed this paperwork. Patient was also notified that provider had been contacted by Chief Schooley and plans on contacting him later in the day. Patient provided verbal consent for provider to present information regarding patient's treatment plan.

Response to treatment: ☐ None ☒ **Some** ☐ Significant ☐ Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 13 June 2017

Reviewed with patient on: 13 June 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

ABBREVIATED MEDICAL EVALUATION BOARD REPORT

SECTION 1: CLINICAL INFORMATION (TO BE COMPLETED BY MEDICAL OFFICERS)

Date: 06-13-2017 Patient Name: Daniel Dennis Marvin Patient SSN: [REDACTED]

Proposed start date for limited duty: 06-14-2017 Proposed end date (< 6 months): 12-13-2017

The period of limited duty is for: (Select one)

☒ 1st LMDU (< 6 months) Entitled ADSDM (no referral to service headquarters necessary).

☐ 2nd LMDU (< 6 months) Entitled ADSDM (no referral to service headquarters necessary). Note that the first and second TLD periods cannot exceed 12 months cumulatively from the date of the first TLD period.

☐ 1st LMDU (< 6 months) Officer ADSDM (referral to service headquarters necessary).

☐ 2nd LMDU (< 6 months) Officer ADSDM (referral to service headquarters necessary).

☐ 2nd or subsequent LMDU periods on Navy and Marine ADSDM involving a distinctly different condition than that responsible for the first and second TLD periods (for referral to service headquarters for "departmental review").

☐ Placement on LMDU if the patient is not already in a LMDU status - at the same time the patient's case is referred to the physical evaluation board for adjudication.

Diagnosis: (1) Generalized Anxiety Disorder ICD-9 CM Code 300.02

(2) Major Depressive Disorder, Recurrent, Moderate ICD-9 CM Code 296.32

(3) BIP-O ICD-9 CM Code K88.0

Circumstances of injury/illness:

The patient is a 32-year-old male who presents with anxiety, depression, and co-morbid medical conditions that negatively impact his ability to function in home, work, and in social settings. The co-morbid BIP-O is of such severity that it daily interferes with military ADLs.

Treatment plan:

PT referred to JCP (mental health). He has on multiple group medications and his BIP-O severely impacts his ability to function in all settings.

Limitations from full duty (including whether transfer/TEMU for treatment is indicated, and any PRT limitations):

Access to all medical appointments. Ensure opportunity for 8 consecutive hours of sleep every 24 hour period. The patient should not have access to weapons. The patient should not POC, deploy, or be placed in austere environments.

SECTION 2: PATIENT INFORMATION TO BE COMPLETED BY PATIENT

I have received full information on the proposed Limited Duty period from my provider. I understand that this period of limited duty is not effective until approved by the MTF Counseling Activity, and that the MTF will report this LMDU action to my current command. I understand I may be referred to duty after the date appearing above on my clinical condition warrants and upon action by my attending provider.

Patient Signature Date

SECTION 3: TO BE COMPLETED BY PATIENT ADMINISTRATION OFFICER/MEDICAL BOARDS OFFICER

The following actions have been completed:

- ☐ Completion of Patient Information Sheet
- ☐ Briefing to Patient on Limited Duty/EMJIS
- ☐ Notification to PEO/Personnel Office
- ☐ Notification to MTF LMDU Coordinator
- ☐ ODD Requested from Patient Command (if LOOD required)
- ☐ Notification to Patient Command
- ☐ Entry into HMDOLIT

Patient Administration Officer/Medical Boards Officer Signature and Date

ROUTING: Original to Patient Health Record; copies to Patient, Patient Command, PEO, MESA Case File, and PERS-421 or MMSR-4

Note Written by PETERSEN, MAUREEN M @ 10 Jun 2017 1412 EDT
32 yo M who presents for skin testing.

Patient with significant PMH for anxiety and IBS was previously seen for evaluation of SOB on exposure to animals and grass. As a child pt states that he had breathing issues required treatment with inhalers until age 18-19. He even required a PICU stay at the age of 3 (no intubation) for these issues. Prior to joining the navy his symptoms had completely resolved but 5 years ago when he moved back to MD he noted symptoms of chest tightness and difficulty getting air in when around cats, dogs and doing PT in the grass. His symptoms are not exacerbated during exercise or URIs. He uses albuterol which improves his symptoms. He has not gone to the ER for these symptoms or taken oral steroids in the past year. Over the past month he has required use of albuterol 4-5 times but none at night. When around grass he also develops pruritus and sometimes small red bumps but no symptoms or rhinorrhea or congestion. He recently started taking zyrtec for these symptoms.

No history of food/medication/venom allergies, eczema, or history of anaphylaxis.
Medication list reviewed with patient, reconciliation completed.

Subject Mental Health - Service

Message I think that being in the Navy is compounding my stress and anxiety levels so much that it is not helping me in my behavior health treatment and IBS. Additionally I have not been able to have in person relationship with my mom or two sisters ever. Also being makes away for so long makes it even more difficult. Being able to live near them and properly develop a relationship for the first time with my mom and sisters (I never lived with or saw my mom or even saw her much in life) would significantly improve my healing, learning and ability to cope. Unfortunately they live in South Carolina. I am not technically able to be "mobilized or deployed" with the IBS issues that I am having and my mental health is causing problems with my day to day living with the numerous extra responsibilities required of me as a Sailor on top of just showing up to do my technical job. I am unable to be productive and get past the fact I have no one locally and my family that I want to build a relationship with beyond a phone are distant and I have never had the opportunity to do so. For my mental health I feel that it is critical as well as I am unsure that I am mentally fit for service.

R,
 Daniel Merwin

Subject Correspondance Between Gastroenterology

Message Just provided a copy of the correspondence I have sent to Gastroenterology relating to the last appointment.

=== Start Email ===

I was just wanting to update you on how the last appointment changes went.

Taking a fiber supplement has stopped some of the diarrhea symptom and at least made my stool softened; as long as I take 2 x 0.52 grams "Psyllium Husk Fiber" capsules. The problem with this is I still have pain; the pain is now lasting a lot longer up to a few hours now at a time instead of 15-60 minutes. A few of the days this week the pain was all day. Additionally I feel a lot more bloated. I have had work interrupted on several occasions due to the pain or need to use the bathroom. I have actually almost felt like lost control of holding it in twice and nearly went in my pants.

The Simethicone has not reduced my gas.
The Hyoscyamine does not help the pain at all.

=== End Email ===

Right Ear:

External Auditory Canal: • Normal.

Tympanic Membrane: • No bulging tympanic membrane. • Not erythematous.

Middle Ear: • No fluid in middle ear.

Left Ear:

External Auditory Canal: • Normal.

Tympanic Membrane: • No bulging tympanic membrane. • Not erythematous.

Middle Ear: • No fluid in middle ear.

Nose:

General/bilateral:

Discharge: • No nasal discharge seen.

External Deformities: • No external nose deformities.

Cavity: • Nasal septum normal. • Nasal mucosa normal. • Nasal turbinate not erythematous. • Nasal turbinate not swollen.

Sinus Tenderness: • No sinus tenderness.

Oral Cavity:

Lips: • Showed no abnormalities.

Buccal Mucosa: • Examination showed no abnormalities.

Pharynx:

Oropharynx: • Normal. • Tonsils showed no abnormalities.

Lymph Nodes:

• Cervical lymph nodes were not enlarged. • Submandibular lymph nodes were not enlarged. • Supraclavicular lymph nodes were not enlarged.

Lungs:

• Respiration rhythm and depth was normal. • Exaggerated use of accessory muscles for inspiration was not observed.

• Clear to auscultation. • No wheezing was heard. • No rhonchi were heard. • No rales/crackles were heard.

Cardiovascular:

Heart Rate And Rhythm: • Normal.

Heart Sounds: • Normal S1 and S2. • No gallop was heard. • No click was heard. • No pericardial friction rub heard.

Murmurs: • No murmurs were heard.

Neurological:

• Oriented to time, place, and person.

Practice Management

Preventive medicine services.

A/P Last Updated by HERNANDEZ, CAMELLIA L @ 25 May 2017 1055 EDT

1. Dyspnea, unspecified: 32 yo M without significant PMH presents with symptoms of chest tightness and difficulty getting air in on exposure to cats, dogs and grass. No significant symptoms of rhinorrhea but he intermittently has developed a pruritic rash on exposure to grass. Exam today WNL. Spirometry performed today also WNL. History and symptoms could be consistent with allergic asthma, however, could also be due to VCD.

-Could not perform SPT today due to recent antihistamine use, however, Pt will follow up on June 7th at 10:15 for SPT to the aeroallergens. Pt will discontinue Zyrtec 5 days prior to next apt.

-Cont treatment with albuterol prn symptoms

-If SPT negative, would consider referral to pulmonology for consideration of MCCT vs laryngoscopy to evaluate for asthma and VCD

-All questions addressed, patient/parent express understanding of the above, and have no further concerns

Procedure(s): -Spirometry Pre-bronchodilator x 1 ADDITIONAL PROVIDER(S): BANKS, TAYLOR ALLEN - Interpretation: The patient has normal baseline spirometry.

Disposition Last updated by BANKS, TAYLOR ALLEN @ 25 May 2017 2031 EDT**Released w/o Limitations****Follow up:** as needed with PCM.**Discussed:** Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding.Note Written by HERNANDEZ, CAMELLIA L @ 25 May 2017 0953 EDT**Consult Order****Referring Provider:** RODAK, COLLEEN M**Date of Request:** 17 May 2017**Priority:** Routine**Provisional Diagnosis:**

Encounter for other general examination

Reason for Request:

This is a 32 yo male with a HX of developing pruritic rash when coming into contact with grass during PT in addition to severe reaction to animal dander → wheezing / bronchospasm / cough please evaluate to determine antigens and if possible desensitization thank you

Note Written by BANKS, TAYLOR ALLEN @ 25 May 2017 2031 EDT

I saw and evaluated the patient. Discussed with resident/fellow and reviewed the history/PE and assessment and plan as documented in the note and agree.

Anxiety & Depression Screening Taken On: 17 May 2017

1. Over the last 2 weeks, how often have you been bothered by feeling nervous, anxious, or on edge?: Several days
2. Over the last 2 weeks, how often have you been bothered by not being able to stop or control worrying?: More than half the days
3. Over the last 2 weeks, how often have you been bothered by feeling down, depressed or hopeless?: More than half the days
4. Over the last 2 weeks, how often have you been bothered by having little interest or pleasure in doing things?: Several days
5. Over the last 2 weeks, how often have you been bothered by the thoughts that you would be better off dead or hurting yourself in some way?: Not at all

Falls Risk Screening (Outpatient) Taken On: 17 May 2017

1. Patient's age: Less than 65 years old
2. History of fall in the past year?: No
3. Physical appearance: **No concerns;**
4. Balance: **No concerns with balance;**
5. Is the patient patient a falls risk?: No

S/O Note Written by RODAK, COLLEEN M @ 19 May 2017 1032 EDT**Chief complaint**

The Chief Complaint is: Asthma, allergy and warts.

History of present illness

The Patient is a 32 year old male.

<<Note accomplished in TSWF-CORE>>

This is my first visit with this 32 yo male ADSM with a HX of IBS-d/ pain, GAD/depression, EtOH abuse and genital warts. He presents today with concerns about his allergies and possible asthma. Patient reports he had surgery on his mouth on April 26, 2017. Patient reports pain 6/10 today in his mouth due to root canal. Patient reports he has an appointment tomorrow for an follow for his mouth. Patient reports he has genital warts as well that he would like to address.

Pain Severity 6 / 10.

Patient reports that they are compliant with medications.

Allergies

Allergies Verified and Updated

NKDA

animal dander.

Current medication

Metamucil one capsule daily

Peridex wash

Motrin 800 mg po twice daily prn

MVI one po daily

Verified CMR

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: ***-**-****

DoD ID: 1286180538

Created: 30 Oct 2017

Past medical/surgical history**Reported:**

Medical: Reported medical history IBS-D
 GAD / depression
 HX of EtOH abuse (previous inpatient treatment)
 HPV genital

Surgical / Procedural: Surgical / procedural history Jaw surgery
 Tonsillectomy
 PRK.

Personal history

Social history reviewed Tobacco - 1/4 pack a week time UK
 Alcohol - 3 drinks a week
 single / no children / CTN at fort Mead.

Family history

Family medical history Mother A & W
 Father DM/ CAD- MI / stent at 40 / melanoma
 brother one half substance abuse
 Sister three (one depression ; one substance abuse)
 Denies a family hx of Crc. Breast CA.

Review of systems

Systemic: No fever, no chills, no night sweats, and no recent weight loss.

Head: No headache. Facial pain.

Eyes: No vision problems.

Cardiovascular: No chest pain or discomfort. Palpitations.

Pulmonary: No cough and no wheezing.

Gastrointestinal: Heartburn. No nausea and no vomiting. Abdominal pain and diarrhea. No constipation.

Genitourinary: No hematuria and no testicular symptoms were present. No abnormal urethral discharge.

Neurological: No motor disturbances and no sensory disturbances.

Psychological: Anxiety, depression, and thinking about suicide passive

once a month in CBT / discusses these thoughts ; one previous suicide attempt took large amounts of ASA -> no treatment. No homicidal thoughts.

Skin: No pruritus. Skin lesion: No rash. Nails are normal.

Physical findings**Vital Signs:**

• Temperature: Reviewed. • RR: Reviewed. • PR: Reviewed. • Blood pressure: Reviewed.

General Appearance:

• Normal. • Well developed. • Well nourished. • In no acute distress.

Head:

Injuries: • No evidence of a head injury.

Appearance: • Head normocephalic.

Neck:

Appearance: • Of the neck was normal.

Palpation: • No tenderness of the neck.

Thyroid: • Showed no abnormalities.

Eyes:

General/bilateral:

External: • Conjunctiva exhibited no abnormalities.

Sclera: • Normal.

Ears:

General/bilateral:

Outer Ear: • Normal.

External Auditory Canal: • External auditory meatus normal.

Right Ear:

External Auditory Canal: • Normal.

Tympanic Membrane: • No bulging tympanic membrane. • Not erythematous.

Middle Ear: • No fluid in middle ear.

Left Ear:

External Auditory Canal: • Normal.

Tympanic Membrane: • No bulging tympanic membrane. • Not erythematous.

Middle Ear: • No fluid in middle ear.

Nose:

General/bilateral:

Discharge: • Nasal discharge seen clear.

Cavity: • Nasal turbinate erythematous. • Nasal turbinate swollen.

Special Clearance: Yes

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:

Treatment modality currently used: Psychoeducation & Behavior Mod

Pain: 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that since his last visit, he received feedback that he had been observed in inappropriate conversation at work which was reported by a coworker. Patient expressed surprise that this happened as he tries to be a positive leader and role model. He noted that he teaches the ethics and sexual harassment seminars. However, he acknowledged that he may have felt too comfortable with someone and said something inappropriate for the workplace. Patient expressed guilt and embarrassment about this. He stated that he needed to work on how to filter his conversations better. Therapist and patient discussed how he felt about making a mistake of this level that was reported to authority figures. Patient described difficult process in not feeling ashamed to go into work. He stated that he tries to remind himself that this incident was a mistake and not representative of who he is as a whole person. Therapist encouraged continuing to follow up with therapy more regularly.

Response to treatment: ☐ None ☒ Some ☐ Significant ☐ Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 01 March 2017

Reviewed with patient on: 01 March 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress:

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would **NOT** like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

Active Plan: N/A

Patient with access to weapons: No

Notes from current session:

Patient presents for follow-up. Since we last met two months ago he's had his dental surgery. He admits he stopped taking his Lexapro several weeks ago because he felt more flat on it. He does not want to take psychiatric medication. He would rather work on himself through therapy. He notes lately he's under increased stress at work because he has been told he's under investigation and he's not sure why. He was drinking 1 to 2 beers a night before his surgery. He tried drinking a beer after his surgery and didn't like how he felt so hasn't drank since. He is not taking a Lunesta as he does not like how he feels on it. He has an appointment with Dr. Paul later today. We discussed his symptoms may be best to respond to therapy alone. Reviewed his psychologic testing results, which he went over with the testing psychologist.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruzska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Created: 30 Oct 2017

Medications: Lexapro 20 mg po daily, naltrexone 50 mg po daily , lunesta 1-2 mg po qhs prn insomnia

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Learns best by: Pictures. Learning is adversely affected by: None.

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will engage in psychotherapy

Intervention: pt declines pharmacotherapy and it is not absolutely indicated. Have discussed sleep hygiene.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will minimize alcohol use/stop drinking

Objective: pt will minimize alcohol use

Intervention: have discussed adverse effects of alcohol on mood and sleep
Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538

Created: 30 Oct 2017

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: [] Excellent [] Good [] Fair [] Guarded [] Poor

Follow-up: prn

Referrals: pt had therapy intake with Dr Paul on 18NOV

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: **SM has no duty restrictions necessitating a profile.** Patient meets the retention standards of Chap 3, AR 40-501 and AR 635-200 for fitness and suitability for continued service. Patient remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security clearance recommended at this time.

Is Service Member able to have access to sensitive information (to the level of current clearance)? **Yes**
Can Service Member perform MOS duties? **Yes**

referral request sent via relayhealth - rodak**Telephone Consult Comments:** Written by RAYMOND, KEVIN D @ 19 Apr 2017 1152 EDT

I have in the past been seen for breathing issues around cats. I have been getting burning sensations on my skin/eyes from grass and animals; sometimes dust will seem to cause breathing issues. I think I have allergies and or asthma related to allergies. Previously I have been seen and given an inhaler which worked for the breathing but I am not under and long term treatment or related to the skin/eyes. This effects me during Physical Training sessions and sometimes in the office (dust). I was not sure if it would be better to email about this over making an appointment just to get a referral.

The Patient is a 32 year old male.

32 y/o AD male returns to the GI clinic for f/u regarding IBS manifested by chronic intermittent abdominal pain. He reports a long history of GI symptoms, dating back to childhood, but symptoms have been more disruptive over the past few years. Notes generalized sharp, crampy abdominal pain about every 1-2 days, that peaks prior to defecation and is relieved after bowel movements. Typically has 1-2 soft or liquid stools per day, infrequently with urgency. Symptoms may be worse with intake of insoluble fibers. Also worse during physical activity and with increased anxiety/stress. He reports minimal improvement since starting a low-FODMAP diet and is not following this strictly currently. He denies any benefit from avoiding dairy, caffeine, and sugar-substitutes.

Of note, patient underwent CT A&P in 2012 for the same abdominal pain, which showed focal wall-thickening at the hepatic flexure with proximal stool retention. Colonoscopy (McNally) in 2012 showed mild congestion in the sigmoid, but biopsies were unremarkable. A subsequent MRE was completely normal.

He was also previously noted to have a +serum AB to H.pylori. He was treated with triple therapy, and a stool test confirmed eradication in 2016.

A/P Last Updated by HALL, NOAH M. @ 13 Apr 2017 1746 EDT

1. Irritable bowel syndrome with diarrhea:

32 y/o male with IBS-D reports minimal benefit with dietary modification. Predominant symptom is abdominal pain and episodes are closely associated with anxiety.

- Will start trial of Metamucil for stool bulking
- If bloating/flatulence becomes an issue, consider transition to a non-fermentable fiber (citrucel OTC)
- Will also provide Levsin SL for symptomatic relief
- Recommended continued f/u with Behavioral Health provider, and could discuss a trial of a low-dose TCA at bedtime as a centrally-acting pain modulator
- F/u in GI clinic in 3-4 months
- Could consider a trial of Rifaximin in the future if no benefit

Medication(s): -PSYLLIUM/SUCROSE-PO 3.4GM/SCOOP POWD - TAKE ONE SCOOP EVERY DAY MIXED IN LIQUID. AFTER TWO WEEKS INCREASE TO TWICE EVERY DAY #2 RF3 Ordered By: HALL, NOAH M. Ordering Provider: HALL, NOAH MONTGOMERY
 -HYOSCYAMINE IR-PO 0.125MG TBSL - DISSOLVE 1 TABLET UNDER TONGUE EVERY EIGHT HOURS AS NEEDED FOR ABDOMINAL PAIN #30 RF3 Ordered By: HALL, NOAH M. Ordering Provider: HALL, NOAH MONTGOMERY

Disposition Last Updated by HALL, NOAH M. @ 13 Apr 2017 1747 EDT

Released w/o Limitations

Follow up: as needed in 3 to 4 month(s) in the GI CL BE clinic or sooner if there are problems.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding.

EPWORTH Sleepiness Scale Version: 1 Completed On: 05 Apr 2017

Questionnaire Notes: EPWORTH : 19

1. How likely are you to doze off or fall asleep while SITTING and READING?: 3
2. How likely are you to doze off or fall asleep while WATCHING TV?: 1
3. How likely are you to doze off or fall asleep while INACTIVE in a meeting, theater, or other similar place?: 2
4. How likely are you to doze off or fall asleep as a PASSENGER in a car for an HOUR without a break?: 3
5. How likely are you to doze off or fall asleep while LYING DOWN to rest in the afternoon when circumstances permit?: 3
6. How likely are you to doze off or fall asleep while sitting and TALKING to someone?: 2
7. How likely are you to doze off or fall asleep while SITTING QUIETLY after a lunch without alcohol?: 3
8. How likely are you to doze off or fall asleep in a CAR, while stopped for a few minutes in the traffic?: 2

Tuberculosis Exposure Risk Assessment Version: 3 Completed On: 05 Apr 2017

1. Since your last Tuberculosis Exposure Questionnaire were you exposed to anyone known to have or suspected of having active tuberculosis(i.e. with persistent cough, weight loss, night sweats, and/or fever)? No
2. Since your last Tuberculosis Exposure Questionnaire or Post Deployment Health Assessment (DD Form 2796), did you have direct & prolonged contact with any individuals of the following groups: refugees or displaced persons: patients hospitalized with tuberculosis, prisoners, or homeless shelter populations?: No
3. Write the name of any country or countries where you have traveled or deployed to since your last Tuberculosis Exposure Questionnaire.: NONE
4. During this travel, did you have prolonged direct contact with the local population? Prolonged direct contact is generally understood as having been within six feet of a person with a bad continuous cough for at least eight consecutive hours on a single day, or for a total of at least fifteen hours per week of a multi-week stay.: No
5. Have you had a prior history of TB or prior treatment for Latent TB?: No
6. PROVIDER: Have you recently had a chronic cough AND did you have any of the following at the same time? Fever, Coughed up Blood, Unexplained Weight Loss, Night Sweats: No
7. PROVIDER: Since your last risk assessment, did you develop any of the following conditions: organ transplant; HIV Infection; Immunosuppression secondary to use of prednisone (equivalent of >15mg/day> 1 month) or other immunosuppressive medication such as Humira, Enbrel or Remicade?: No
8. PROVIDER: Since your last TB risk assessment did you develop any of the following conditions: diabetes, silicosis, cancer of head or neck, Hodgkin's disease, leukemia, end stage renal disease, intestinal bypass or gastrectomy, chronic malabsorption syndrome, low body weight (10% or more below ideal weight) or injection drug use?: No

Anxiety & Depression Screening Taken On: 05 Apr 2017

1. Over the last 2 weeks, how often have you been bothered by feeling nervous, anxious, or on edge?: More than half the days
2. Over the last 2 weeks, how often have you been bothered by not being able to stop or control worrying?: Several days
3. Over the last 2 weeks, how often have you been bothered by feeling down, depressed or hopeless?: Several days
4. Over the last 2 weeks, how often have you been bothered by having little interest or pleasure in doing things?: Several days
5. Over the last 2 weeks, how often have you been bothered by the thoughts that you would be better off dead or hurting yourself in some way?: Not at all

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

- 3) Is there a complaint of changes in hearing since the last hearing test? [] Yes [X] No
 4) Is there an in-depth audiometric evaluation in the record when existing hearing tests shows thresholds in either ear at 500, 1000 and 2000 Hz that average 30 dB or greater or 45 dB or greater at 3000 Hz or 55 dB or greater at 4000 Hz? [] Yes [X] No
 5) If the patient is enrolled in a Hearing Conservation Program, has there been a monitoring audiogram within the past 12 months? [] Yes [X] No.

Personal history

Behavioral: Caffeine use. No tobacco use none. (remote one year in Hookah sometimes in Japan – none since 2007);
 Alcohol: Alcohol two to three drinks a couple of times per week. not bingeing. very different now and knows the difference and behaving differently. doesn't like getting drunk or feeling poorly the following day.

Family history

Family medical history paternal addiction— sister drug; dad-alcohol problem; maternal aunt- alcohol;
 Father is alive not in contact
 Mother is alive No DM, No CAD. healthy
 Cancer Dad- melanoma;
 Heart disease dad/PGF- CAD; dad- stent 2v (alcohol); Dad/PGM/PGF/sister- DM,
 Dad- AMI (s/p heart surgery); no CVA.

Review of systems**Head:** No head symptoms.**Neck:** No neck symptoms.**Eyes:** No eye symptoms.**Otolaryngeal:** No otolaryngeal symptoms.**Breasts:** No breast symptoms.**Cardiovascular:** No cardiovascular symptoms.**Pulmonary:** No pulmonary symptoms.**Gastrointestinal:** No gastrointestinal symptoms.**Genitourinary:** No genitourinary symptoms.**Endocrine:** No endocrine symptoms.**Hematologic:** No hematologic symptoms.**Musculoskeletal:** No musculoskeletal symptoms Exercises Aerobic three hours minimum weekly. Enjoys running however his IBS causes problems during exercise. PRT passes easily. Doing about one hour weekly strengthening exercises weekly. Meets recommendations of 150 minutes aerobic exercise and 30-60 minutes strengthening exercises weekly.**Neurological:** No neurological symptoms.**Psychological:** Psychological symptoms refer to BH screening questionnaire above. No suicidal/homicidal ideation; sleeps 6-7 hours nightly; unrested; tired often; has good routine; discussed sleep hygiene. problems staying asleep and can go back easily asleep; already did a the process for the sleep study; doesn't want to see someone. Wants to sleep all the time. Not narcoleptic.**Skin:** No skin symptoms.**Allergic and Immunologic:** No allergic/immunologic symptoms.**Physical findings****Vital Signs:**

° Current vital signs reviewed.

NMCPHC Workplace HRA - Participant Report

UK/Command: 00168 - NATNAV MEDCEN BETHESDA

You rated your health as Good. Personal perception about how healthy you are is usually quite accurate. Your Personal Health Risk Appraisal Report identified 3 risk categories from the answers you provided on key topics that relate to overall health, which places you in a LOW risk group. Numbers of risk factors have been shown to predict future health care use and health care costs. It is important for individuals to move toward the low risk category by reducing the number of behavioral risks, and for those already in low risk to avoid increasing the number of risk factors over time.

**Tobacco Use - Current Tobacco Usage - No**

<http://www.nmcpchc.org>
<http://www.nmcpchc.org/hra/hra.htm>

Being tobacco free is a great choice. You are healthier, more mission ready and are saving money.

**Alcohol Use - Binge Drinking - One or twice per year**

<http://www.nmcpchc.org/hra/hra.htm>

Many Sailors and Marines occasionally drink more heavily than usual during celebrations or special events. Plan ahead to avoid alcohol-related incidents that will put your career in danger.

**Alcohol Use - Alcohol Use Driving - Never (i.e., not during the past year)**

<http://www.nmcpchc.org/hra/hra.htm>

You are being a responsible Sailor or Marine by never driving drunk or riding with someone who has been drinking. You can also help fellow Sailors and Marines avoid alcohol-related incidents by looking out for those who try to drink and drive, and help them get home safely.

**Injury Prevention - Seatbelts - Always**

<http://www.nmcpchc.org/hra/hra.htm>

By always using your seat belt, you decrease your risk of serious injury or death after an accident by about 50%.

**Injury Prevention - Vehicle Helmet - Always**

<http://www.nmcpchc.org/hra/hra.htm>

Your use of a protective helmet provides significant protection against head injury or death. Wearing other protective gear, maintaining control of your vehicle and driving defensively can also reduce your risk.

**Injury Prevention - Safety Equipment - Always**

<http://www.nmcpchc.org/hra/hra.htm>

You are protecting yourself against injuries and disease at your worksite by using appropriate safety equipment.

<http://www.elsevier.com/locate/jep>
<http://dx.doi.org/10.1016/j.jep.2006.05.004>

You are mostly satisfied with your life. Life satisfaction is a common goal that we as human beings strive to achieve. Work, relationships, and social activities can all contribute to life satisfaction.

<http://www.madbury-madison.com/members/list.asp> <http://www.madbury-madison.com/members/list.asp>

Occasional stress in your work or at home is common. Problem solving or discussing possible solutions with someone who may help reduce or eliminate some of your stress.

<http://www.mcs.vuw.ac.nz/~mcs04/courses/intermediateV2/stressManagement/17689main.html>

Expressing your feelings can help you see that you are not alone in how you feel. Talking with others can also provide you with advice on successfully managing your concerns.

<http://www.mindgarden.com/healthcare/healthcare.asp> or the published version: <http://www.mindgarden.com/healthcare/healthcare.asp>

Choosing to use a latex condom consistently and correctly each time you have sex will significantly reduce your risk of acquiring a sexually transmitted infection.

<http://www.cdc.gov/ebook/ncid/ncidhome.htm#adults>

The national goal for Americans is to get at least 1 hour and 30 minutes (90 minutes) of moderate intensity aerobic activity every week. Aerobic (cardio) exercise has many benefits, including giving you more energy and higher endurance, preventing many chronic diseases, like diabetes, high blood pressure, and high cholesterol, and maintaining a healthy body weight. Continue to include cardio exercise into your lifestyle.

<http://www.cdc.gov/od/oc/media/press/2007/s070625a.htm>

You routinely engage in strength training, which improves your strength, maintains lean body mass, builds strong bones, and decreases many of the risk factors associated with coronary heart disease.

Hi Daniel, Given the severity of your symptoms I'm surprised that you have not been back for a follow-up or contacted me since last November. I am glad you made an appointment. There are many options for treatment of IBS, but it will require several follow-up visits to discuss and implement. I agree if we are unable to manage your symptoms better, you'll need to undergo an MEB, but again, there are many options available that you have not yet tried. V/R, Helen

Subject: RE: Follow-Up - Pain

Helen, I CCed my chain of command so they know that I have been seen on and off for this issue over the years and are aware of anything on-going. I scheduled an appointment for 13 April with Dr. Hall which was the next available in the clinic. Even with management of my diet, I still have 4-6 severe episodes a week or more (spasms, pain, expedient evacuation and diarrhea). Every episode is extremely draining of me. A lot of times after an episode I just want to lay down and sleep because of the extreme intensities. A few of the most recent issues almost had me call 911 due to the extreme pain. I scheduled the appointment for a few reasons. 1. Currently I have the note you provided which makes me technically non-deployable and this needs to be discussed. 2. I really need to try anything available within the military system to help manage the episodes if there is nothing else then I would like to start medical separation in order to seek alternative treatments. Respectfully, CTN1

Deployments: N/A
Deployment Related: N/A
Trauma: N/A
WTU: N/A
MEB in progress: N/A
AdmSep in progress: N/A
Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: Psychoeducation & Behavior Mod****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he was doing well. He stated that he received the results of the psychological testing but was unsure of the content. Therapist and patient reviewed diagnostic results which confirmed diagnosis of GAD and identified Schizoid traits. Therapist provided psychoeducation regarding diagnoses. Further conversation focused on patient's positive progress towards his goals. He stated that he has been interacting more with people. Therapist and patient discussed differences between rigidity and appropriate boundaries. Final conversation focused on identifying goals for next weeks.

Response to treatment: ☐ None ☒ Some ☐ Significant ☐ Marked**Mental Status Exam:**

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

ASSESSMENT

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Diagnosis:

Axis I: Generalized Anxiety Disorder
Alcohol Abuse Disorder

Axis II: Diagnosis deferred on Axis II

Axis III: Deferred

Axis IV: Financial stress, lack of social support

Axis V: 65

Prognosis: () Excellent (X) Good () Fair () Guarded () Poor

Patient's capacity to participate in and benefit from therapy is evidenced by:

(X) good insight/judgment, (X) a desire to resolve their disorder, (X) verbal agreement to the treatment plan

Safety Risk:**Non-Modifiable Factors:**

Gender (risk factor if male):	Yes
H/O Suicide Attempts:	Yes – twice in adolescence
Organized Plan:	No
Chronic Psychiatric Disorder:	Yes
Recent Psychiatric Hospitalization:	No
H/O Abuse or Trauma:	Yes – sexual abuse as a child
Chronic Physical Illness:	No

2. Pt **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: **S1**. Pt meets the retention standards of MANMED for fitness and suitability for continued service. Pt remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security clearance recommended at this time.

Is SM able to carry and fire weapon, from a BH perspective (safety)? No

Is SM able to have access to sensitive information (to the level of current clearance)? Yes

Is SM able to deploy? Yes

Can SM perform currently assigned MOS duties? Yes

A/P Written by PAUL, SHERIN @ 02 Mar 2017 1050 EDT

1. Generalized anxiety disorder

Procedure(s): -Psychiatric Therapy Individual Approximately 60 Minutes x 1

Disposition Written by PAUL, SHERIN @ 02 Mar 2017 1051 EDT

Released w/o Limitations

Follow up: 2 week(s) in the PSYCHIATRY BE clinic or sooner if there are problems.

60 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Active Plan: N/A

Patient with access to weapons: No

Notes from current session:

Pt presents for follow up with this provider. At our last meeting pt was advised to resume naltrexone 50 mg po qam to reduce alcohol use. Today he says he drinks less when he drinks (1-2 drinks at a time now) and thinks the medication is helpful. He has dental surgery at the end of April so we discussed stopping naltrexone 3-7 days before the surgery and resuming it a week after the surgery as he believes he will be prescribed opiate pain medication. He takes lunesta rarely. He continues to experience variable sleep. He already had CBT-I and had a sleep study that was negative for sleep apnea. He is stressed about work as he juggles many responsibilities and wishes he didn't reenlist. He is trying to pursue a med board for his GI symptoms. He has psychologic testing but hasn't had his feedback session about it yet. He denies having suicidal thoughts since we last met.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruzska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Learns best by: Pictures. Learning is adversely affected by: None.

Patient would not like family members involved in care.

Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High
 Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will engage in pharmacotherapy, psychotherapy

Intervention: Continue Lexapro 20 mg po daily. Advised pt not to take lunesta 1-2 mg po qhs prn insomnia if he is sleeping well without it. Pt told not to take with alcohol or unisom. Counseled pt on risks/benefits and he consented to treatment. Discussed sleep hygiene.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will minimize alcohol use/stop drinking

Objective: pt will minimize alcohol use

Intervention: have discussed adverse effects of alcohol on mood and sleep. Ordered GGT and LFTs. Continue naltrexone 50 mg po daily. Have discussed at referral. Pt self-referred in past and says he is not drinking as much as he was then and does not think he needs it now. He agrees to try AA meetings, which he has already been to but has not found one where he feels a rapport yet. Continue to monitor

Measure: self-report, lab results

Therapy Type:

Not Set

Dx Interview

Appointment Comments:

CAC

Note Written by BENTON, JIKESHA R @ 10 Feb 2017 1406 EST

SM Merwin is as 31 year old, single, Caucasian, male, AD USN E-6 Cryptologist. SM was seen for a 1 hour clinical interview by LT Martinez on 02FEB17 under Dr. Benton's supervision. This writer engaged in 2 hours of chart review and 5 hours of psychological report preparation and writing. A 1 hour feedback session was scheduled after the conclusion of the clinical interview. LT Martinez administered the MCMI-III, MMPI-2, and RISB on 02FEB17.

Initial Impressions

Psychological testing results were consistent with the established diagnoses of Generalized Anxiety Disorder. SM Merwin does not meet criteria for Borderline Personality Disorder. SM Merwin endorsed anxious ruminative thoughts and stress caused by feelings of guilt. SM Merwin's pattern of unstable relationships appears to be more in line with Schizoid personality traits that may have been adaptive at a young age in the context of his childhood physical and emotional abuse. SM Merwin exhibits a lack of interest in social relationships, a tendency towards a solitary lifestyle, emotional coldness, and apathy. Individuals with Schizoid traits may also demonstrate a rich, elaborate and exclusively internal fantasy world. SM Merwin indicated he enjoys the fantasy world of movies and frequently finds himself daydreaming.

Mental Status Exam

Mental status examination revealed an alert, fully oriented, appropriately dressed and groomed male who appeared his stated age. SM Merwin presented with a pleasant mood and congruent affect. Throughout the session, SM Merwin's mood and affect appeared unchanged, even when discussing difficult or emotional topics. SM Merwin maintained appropriate eye contact throughout the session. SM Merwin was engaged in the interview and testing. His speech was normal in tone and rate. Cognition was grossly intact and abstraction was adequate. Recent and remote memory was intact. Thought process was clear and goal oriented. SM Merwin did not exhibit ideas of reference, paranoia, or delusions. There was no evidence of mania. Judgment and impulse control were good. No indication of psychomotor retardation or agitation. SM Merwin denied current suicidal or homicidal ideation, plans, or intent.

Risk Assessment

SM Merwin has a history of suicidal ideation occurring approximately once a month since adulthood. His protective factors include his job, his hobby of creating video games, and wanting to find purpose in his life. SM Merwin has low social support, but this does not seem to be a significant stressor. SM Merwin does not have a history of attempts and denies access to lethal means. He denied current ideation, plan, or intent. SM Merwin is currently assessed at a mild risk for suicide, and should continue to be monitored by his healthcare providers.

Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: Behavior Mod****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he has been reading through his mother's journals from his childhood. He stated that he feels reassured that his perceived experiences are in line with what actually happened. Patient and therapist discussed abusive home and abusive interactions that he had with his father. He expressed concern that he has become like his father in rigidity, emotional detachment, and isolation. However, patient agreed that he has a level of insight that his father does not. He expressed interest in working on these trends. He identified a goal for the week.

Response to treatment: ☐ None ☒ Some ☐ Significant ☐ Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in military uniform. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

ASSESSMENT**Diagnosis:**

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Axis I: Generalized Anxiety Disorder
 Alcohol Abuse Disorder
 Axis II: Diagnosis deferred on Axis II
 Axis III: Deferred
 Axis IV: Financial stress, lack of social support
 Axis V: 65

Prognosis: () Excellent (X) Good () Fair () Guarded () Poor

Patient's capacity to participate in and benefit from therapy is evidenced by:

(X) good insight/judgment, (X) a desire to resolve their disorder, (X) verbal agreement to the treatment plan

Safety Risk:*Non-Modifiable Factors:*

Gender (risk factor if male):	Yes
H/O Suicide Attempts:	Yes – twice in adolescence
Organized Plan:	No
Chronic Psychiatric Disorder:	Yes
Recent Psychiatric Hospitalization:	No
H/O Abuse or Trauma:	Yes – sexual abuse as a child
Chronic Physical Illness:	No

This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☐ Low ☒ Intermediate ☐ High

Harm to Others: ☒ Not Elevated ☐ Low ☐ Intermediate ☐ High

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Safety Plan:

☐ Pt released without limitations, verbally commits to plan below and current safety to self/others.

☐ Pt released to Chain of Command with the following limitations: _____

☒ Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 15 November 2016

Reviewed with patient on: 15 November 2016

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress:

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would NOT like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

Military Specific Interventions:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Pt **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.

Notes from current session:

Pt presents for his fifth appt with this provider. At our last meeting we added naltrexone 50 mg po qam to reduce alcohol use. We also added lunesta 1-2 mg prn for sleep. Today pt states he took the naltrexone for a week and found it helped him desire to drink less, but he was taking it at night and waking up frequently so he stopped taking it. He doesn't think the lunesta is helpful so hasn't been taking it. He has stopped drinking during the week and over the weekend drank four beers on Saturday night and two beers on Sunday. He stopped drinking caffeine two days ago. He has felt more awake and slept well last night. He asked his mother for a copy of her journal from the 1990s when he was a child, which he brought to today's appt. He states it is 357 pages. He pointed out a few pages that indicate his father, who had custody of pt and his sisters, was physically abusive to pt and his sisters. Pt plans to show journal to Dr Paul later today. He has psychologic testing scheduled for tomorrow. He denies having nightmares about the journal. He denies having suicidal thoughts since we last met.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembrukska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:
General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

01FEB17 phq9= 7 (#9=0); gad7= 10

Risk Assessment:

C-SSRS Baseline (9/6/2016): 5 - Lifetime thoughts of suicide with plan or actual behavior endorsed.

Over lifetime, Wish to be Dead?

Yes

Over lifetime, Suicidal Thoughts?

Yes

Over lifetime, Suicidal Thoughts with Method?

Yes

Over lifetime, Suicidal Intent?

Yes

Over lifetime, Suicide Intent with Specific Plan?

Yes

Over lifetime, Suicide Behavior?

Yes

Number of events: 3

Most recent Suicidal Thoughts/Behaviors?

1-3 months ago

Suicidal Thoughts Duration?

Less than 1 hour

Suicidal Thought Frequency?

Less than once a week

C-SSRS Current: not taken

RISK FACTORS (Weaknesses): (also see patient reported issues above in vitals)

☒ Male

☐ History of family/friend suicide

☐ Chronic medical conditions

☒ Impulsivity

☒ History of abuse

☐ Chronic pain

PROTECTIVE FACTORS (Strengths):

☐ Married, children

☒ Active treatment engagement

☐ Good coping/problem solving skills

☒ Hopefulness present

☐ Faith/religion commitment

☐ Positive future orientation

Allergies: nkda

Medications: Lexapro 20 mg po daily, wellbutrin xl 300 mg po qam, unisom OTC

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Learns best by: Pictures. Learning is adversely affected by: None.

Patient would not like family members involved in care.

Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in civilian clothing.

Behavior/Orientation: Polite, and cooperative.

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: [] Not Elevated [x] Low [x] Intermediate [] High

Harm to Others: [] Not Elevated [x] Low [] Intermediate [] High

Diagnosis:

Unspecified Anxiety Disorder, r/o PTSD; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will engage in pharmacotherapy, psychotherapy

Intervention: Continue Lexapro 20 mg po daily. Advised pt not to take lunesta 1-2 mg po qhs prn insomnia if he is sleeping well without it. Pt told not to take with alcohol or unisom. Counseled pt on risks/benefits and he consented to treatment. Discussed sleep hygiene.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will minimize alcohol use/stop drinking

Objective: pt will minimize alcohol use

Intervention: have discussed adverse effects of alcohol on mood and sleep. Ordered GGT and LFTs. Encouraged pt to restart naltrexone 25 mg po daily for reduction in alcohol use x 1 week, then increase to 50 mg po daily, and take it in the morning. Discussed at referral. Pt self-referred in past and says he is not drinking as much as he was then and does not think he needs it now. He agrees to try AA meetings, which he has already been to but has not found one where he feels a rapport yet. Continue to monitor

Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

☐ good insight/judgment, ☒ a desire to resolve their disorder, ☒ verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: ☐ Excellent ☐ Good ☐ Fair ☐ Guarded ☐ Poor

Follow-up: one month

Referrals: pt had therapy intake with Dr Paul on 18NOV

Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

Medical Record

9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:

Treatment modality currently used: Behavior Mod

Pain: 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He reported that he was contacted by psych testing regarding diagnosis clarification and he will follow through on scheduling appointment. Patient reported that he spent time with his mother's side of the family which was a positive experience. He stated that he learned a lot about his parent's early relationship. Therapist and patient processed his feelings about this. Patient recognized that throughout childhood, his experiences with his father shaped his behavior. He acknowledged keeping people away from him as he cannot contend with guilt or disappointing others. He stated that when he does engage with others it feels overwhelming because he goes above and beyond standards to make others happy. However, this has led to isolation as he does not want to risk disappointing others. Patient also identified rigidity of behavior, especially in regards to cleanliness, which is also an outdated defense mechanism from childhood. Therapist and patient discussed engaging in uncomfortable target behaviors to help ease rigidity and to encourage social development.

Response to treatment: [] None [☒] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in military uniform. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Overall health reported as: Good

Pain Level (0-10): 0

Currently treated: not answered

Suicidal Ideation Risk - C-SSRS score: 5 Past/Prep Behavior: Yes

past attempts: 3 (as of 09/06/2016)

Harm Others Risk over next week as of 9/6/2016 - None

Active Plan: N/A

Patient with access to weapons: No

Notes from current session:

Pt presents for his fourth follow-up with this provider. At our last meeting we added Wellbutrin xl 150 mg po qam to target mood at his request as his mother and sister take it and find it helpful. Today pt states he continued to feel tired on it so started taking it at night about a week. He has had disrupted sleep. He has also continued to drink 3-4 drinks 3-4 nights per week. He didn't drink any alcohol over Christmas as he was visiting his relatives who don't drink, but drank 18 Corona beers over the four-day New Year's holiday (he did not have to work). Discussed with pt he shouldn't be drinking while taking his medications as they won't work while on alcohol, and his fatigue and sleep disturbance could be caused by his drinking. He acknowledges this though also states he drinks to help him sleep because he can't turn his mind off at night. Discussed he should not take Wellbutrin at night as this will also impair his sleeping. Noted increased phq9 and gad7 scores. He thinks he feels more anxious since starting Wellbutrin so we agreed to stop it. His work is going well. Dr Paul referred him for psychologic testing but he missed the phone call to make the appt. He plans to call back to schedule it. His abdominal pain has improved.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruzska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported**Depression** - PHQ2: 2 - Depressive Syndrome Unlikely

PHQ9: 13 - Minor depressive symptoms reported. Evaluation indicated.

Thoughts that you would be better off dead, or of hurting yourself in some way

Few or several days

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)
 Asthma during childhood
 Allergic response to pets
 Recurrent intestinal pain (possibly lactose intolerance)
 PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4
 Tobacco/e-cigs: none PPD Equivalent:
 Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.
 Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old.
 Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.
 Highest level of education achieved is: High School graduate.
 Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.
 Patient reports religion, faith or spirituality DO NOT play an important role in life.
 Social support reported as satisfactory.
 Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure
 Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)
 Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None
 Patient denies treatment team needs to be aware of specific ethnic/cultural issues.
 Learns best by: Pictures. Learning is adversely affected by: None.
 Patient would not like family members involved in care.
 Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in civilian clothing.
 Behavior/Orientation: Polite, and cooperative.
 Abnormal Movements: normal gait. No abnormal movements apparent.
 Rapport: easy to establish
 Speech: normal tone and kinetics
 Mood: mildly dysphoric
 Affect: full
 Thought Process: circumstantial
 Thought Content: no current SI/HI/AVH
 Judgment: fair

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High
 Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Unspecified Anxiety Disorder, r/o GAD; r/o PTSD; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538

Created: 30 Oct 2017

Safety Plan:

- ☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will engage in pharmacotherapy, psychotherapy

Intervention: discontinue Wellbutrin xl by tapering back down from 300 mg to 150 mg po qam x 3 days, then stopping. Continue Lexapro 20 mg po daily. May start lunesta 1-2 mg po qhs pm insomnia to address racing thoughts at night, with plan for short term use. Pt told not to take with alcohol or unisom. Counseled pt on risks/benefits and he consented to treatment. Discussed sleep hygiene.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will minimize alcohol use/stop drinking

Objective: pt will minimize alcohol use

Intervention: discussed adverse effects of alcohol on mood and sleep. Ordered GGT and LFTs. Start naltrexone 25 mg po daily for reduction in alcohol use x 1 week, then increase to 50 mg po daily if tolerated. Discussed ats referral. Pt self-referred in past and says he is not drinking as much as he was then and does not think he needs it now. He agrees to try AA meetings, which he has already been to but has not found one where he feels a rapport yet. Continue to monitor

Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

- ☐ good insight/judgment, ☒ a desire to resolve their disorder, ☒ verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: ☐ Excellent ☐ Good ☐ Fair ☐ Guarded ☐ Poor

Follow-up: one month

Referrals: pt had therapy intake with Dr Paul on 18NOV

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: SM has no duty restrictions necessitating a profile. Patient meets the retention standards of Chap 3, AR 40-501 and AR 635-200 for fitness and suitability for continued service. Patient remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security

WR ADULT BEHAVIORAL HEALTH CLINIC
FOLLOW-UP NOTE

Patient Name: Daniel Merwin
 Patient last 4: 0538
 Appt #: Intake + 1
 Therapy time: 60 minutes
 E&M time: 60 minutes

Identifying Data: 31-year-old, Single, Caucasian, Male**Military Data:**

Branch: USN
 Rank: PO1
 MOS: CTN
 TIS: 11-years
 Deployments: N/A
 Deployment Related: N/A
 Trauma: N/A
 WTU: N/A
 MEB in progress: N/A
 AdmSep in progress: N/A
 Special Clearance: Yes

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: Supportive****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He stated that he visited his family recently and confirmed that both his grandmother and mother were diagnosed with Bipolar Disorder. He stated that his mother at least has been treated with Wellbutrin in the past. Patient's two other sisters also have been diagnosed with Depression and Bipolar disorder. Therapist and patient discussed patient's diagnosis and find that a referral to psychological testing is warranted to clarify diagnosis. Further conversation focused on patient's perfectionism and difficulty with emotional/relational/physical intimacy.

Response to treatment: [] None [X] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in military uniform. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: () Not Elevated () Low **(X) Intermediate** () High

Harm to Others: **(X) Not Elevated** () Low () Intermediate () High

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 15 November 2016

Reviewed with patient on: 15 November 2016

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress:

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would **NOT** like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

Military Specific Interventions:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Pt **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: **S1**. Pt meets the retention standards of MANMED for fitness and suitability for continued service. Pt remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security clearance recommended at this time.

Is SM able to carry and fire weapon, from a BH perspective (safety)? No

Is SM able to have access to sensitive information (to the level of current clearance)? Yes

Is SM able to deploy? Yes

Can SM perform currently assigned MOS duties? Yes

Notes from current session:

Pt presents for his third follow-up with this provider. At our last meeting we increased his Lexapro to 20 mg po daily to target anxiety/irritability. Today he states he has not had suicidal thoughts since our last meeting. He has felt more tired since increasing the Lexapro. Two days ago he switched it to night time dosing. He started taking unisom last night for sleep as he was waking up frequently, and slept well on it. He just returned from visiting his family (grandmother, mother and sister) in California. He found out GM and mother have bipolar disorder and sister has depression> they all take Wellbutrin and find it helpful. He started seeing Dr Paul and has a follow up with her tomorrow. He is drinking 3 drinks (beers) around 3-4 nights per week. He plans to stop drinking during the week now. He continues to have ongoing abdominal pain and is seeing GI about this.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported

Depression - PHQ2: 2 - Depressive Syndrome Unlikely

PHQ9: 13 - Minor depressive symptoms reported. Evaluation indicated.

Thoughts that you would be better off dead, or of hurting yourself in some way

Few or several days

Anxiety - GAD 2: 5 - Anxiety Syndrome Possible, see GAD7

GAD 7: 15 - Moderate anxiety symptoms reported. Evaluation indicated.

PTSD - 4QPTSD: 3 - PTSD possible, see PCL. Evaluation indicated

PCL-5: 37 - Some PTSD symptoms reported

ALCOHOL - AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT

AUDIT: 13 - Harmful or Hazardous Alcohol Consumption likely

RELATIONSHIP ISSUES - CSI - Pt reports no significant other - no score

Suicidal Thought Frequency? Less than once a week

C-SSRS Current: not taken**RISK FACTORS (Weaknesses):** (also see patient reported issues above in vitals)☒ Male ☐ History of family/friend suicide☐ Chronic medical conditions ☒ Impulsivity☒ History of abuse ☐ Chronic pain**PROTECTIVE FACTORS (Strengths):**☐ Married, children ☒ Active treatment engagement☐ Good coping/problem solving skills ☒ Hopefulness present☐ Faith/religion commitment ☐ Positive future orientation**Allergies:** nkda**Medications:** Lexapro 20 mg po daily, unisom OTC**Past Behavioral Health History:**

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Unspecified Anxiety Disorder, r/o GAD; r/o PTSD; Unspecified depressive disorder, r/o MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

DoD ID: 1286180538

Created: 30 Oct 2017

Goal:pt will experience decrease in anxiety and improvement in mood

Objective: pt will engage in pharmacotherapy, psychotherapy

Intervention: will add Wellbutrin xl 150 mg po qam x 1 week, then increase to 300 mg po qam if tolerated/efficacious. Continue Lexapro 20 mg po daily. Consider taper down on dose due to side effects if Wellbutrin tolerated/effective. Discussed possible interaction with unisom and Lexapro. Counseled pt on risks/benefits and he consented to treatment.

Measure:gad7, pcl, phq9

Problem #2: safety

Goal:pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal:pt will minimize alcohol use

Objective: pt will minimize alcohol use

Intervention: discussed adverse effects of alcohol on mood and sleep. Pt insists he is cutting back.

Continue to monitor. Consider ats referral.

Measure:self-report

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: [] Excellent [] Good [] Fair [] Guarded [] Poor

Follow-up: one month

Referrals:pt has therapy intake with Dr Paul on 18NOV

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: **SM has no duty restrictions necessitating a profile.** Patient meets the retention standards of Chap 3, AR 40-501 and AR 635-200 for fitness and suitability for continued service. Patient remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security clearance recommended at this time.

Is Service Member able to have access to sensitive information (to the level of current clearance)? **Yes**Can Service Member perform MOS duties? **Yes**Lab Result Cited by TOBAR,EDEN @ 28 Sep 2016 2152 EDT

Hi Daniel, Great insight- there is certainly a relationship between IBS and mental health. That's why we call your gut your "second brain". It sounds like you've started to make some progress and I'm more than happy to meet with you again to talk about next steps in your care. Please let me know if you need any assistance setting up another appointment. In the meantime, if you've already stopped dairy and Splenda and are looking for more ways to modify your diet, you may consider choosing low fodmap foods (see attached sheet). It may give you a bit more flexibility than just meat/potatoes. -Helen-----Original Message-----From: daniel.d.merwin [mailto:daniel.d.merwin@gmail.com] Sent: Friday, November 25, 2016 2:09 PM To: Copsey, Helen C CTR (US) Subject: [Non-DoD Source] RE: Follow-Up - Pain I probably will schedule a follow up soon. I have more food log completed. I also wanted to bring up important information I learned more extensively about recently. I am being treated for mental disorders. My family mom, grandma, great grandma, sister have mental health issues and IBS-D/C. Which made me look for association between mental health and IBS and see some papers have been written on it. Anyways I have been eating mostly meat and potatoes for now because it's really the only safe food so far and really needed a break from the pain and diarrhea. I still have diarrhea half the week but no pain on meat and potato diet. - Daniel Merwin

Special Clearance: Yes**CHIEF COMPLAINT:** The patient reports the following problems/difficulties:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

Pt reports the following additional issues:

Work Performance Issues: Yes	Spouse/Sig Other Problems: No
Work Colleague Problems: No	Legal Problems: No
Anger Problems: Yes	Financial Problems: Yes
Overall level of difficulty in work, home, social functioning: Very difficult	

Behavioral Health Vitals (patient reported):

Overall health reported as: Good
Pain Level (0-10): 0
Is pain currently treated: not answered
Difficulty in work, home, social functioning: Very difficult

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

HISTORY OF PRESENT ILLNESS:

Patient identified that depressive and anxiety symptoms originated in childhood. Patient stated that because of an abusive home environment, patient was always anxious about getting in trouble with his father. Patient revealed that he attempted suicide 2 x during his adolescence by attempting to over dose on Aspirin once and drinking a significant quantity of alcohol on another occasion. He did not suffer any significant consequences from these attempts and never reported it to others.

PSYCHIATRIC ROS:

SM reports the following self-reported items on screening before appt:

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ2	DEPRESSION SCREENER	2	Depressive Syndrome Unlikely
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD2	ANXIETY SCREENER	5	Anxiety Syndrome Possible, see GAD7
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.

Harm to Others: (X) Not Elevated () Low () Intermediate () High

DEVELOPMENTAL/SOCIAL HISTORY:

Patient was born in California. He is the oldest of 3 children born to his parents. He has 2 younger sisters. Patient stated that his parents separated when he was 3 years-of-age. His father was awarded primary custody of the children, which patient feels was done through his father's manipulations. Notably, patient reports both parents were physical in managing his younger sister's behavioral outburst and often left bruises on her. His father re-married when he was 8-years old and then remarried again when patient was 18. Patient had visitation with his mother as a child but noted that these visitations were often disrupted by his younger sister's behavioral outbursts. Patient stated that he was frequently scared as a child. He stated that his dad was always angry and yelling at someone. Patient stated that he tried hard to do everything correctly to avoid his dad's attention. He recalled trying to stay in his room as much as possible to avoid the overall family environment. Patient also reported that his father kept pets in the house despite significant exacerbation of his asthma that required medical intervention frequently. The patient and his family participated in intermittent family counseling but patient did not find it to be beneficial as they frequently changed therapists when his dad was displeased. Patient has had limited contact with his mother since leaving the home at 18. He recalls 6/7 visits in the past 15-years. However, he is working on rebuilding the relationship. Patient is currently estranged from his father and has not

interacted with him in the past 2-years. Prior to that, they saw each other 4 times in the past 15-years. Patient feels closest with his youngest sister because they have more shared experiences. However, he does not describe a strong relationship with her either. Notably, patient stated that he recently started recalling memories of sexual molestation by a paternal cousin in his early childhood (ages 6-12). He stated that the abuse stopped after the family moved from California to New Jersey.

The patient reported that he was teased by his peers for being underweight and because his clothes smelled like mildew as his parent's didn't properly do laundry. However, he was an excellent runner and gained positive experiences by participating in track and cross country. He stated that he struggled academically because he had difficulty learning and keeping focus. He acknowledged that he day dreamed a lot through school and didn't do his homework. However, patient graduated with a 2.2 GPA on time. After graduation, patient moved to Pennsylvania to get away from his home environment. He attempted 1 and ½ semesters at Allentown Business School (now closed) prior to dropping out. Patient worked at McDonald's and T-Mobile for 2 years prior to enlisting. Patient stated that he liked the Navy initially but finds the structure constricting at this point. Patient acknowledged that he likes what he does and is hoping to eventually build his own company developing video games.

Patient stated that he is currently in a romantic relationship but is dissatisfied. He stated that he does not ever feel close or connected to other people stating "I don't care about anyone except maybe my little sister". He described having significant difficulty experiencing empathy for others and described himself as selfish. He acknowledged that even the kind things he does for others is motivated by self-interest. He stated that he has tried to end the relationship with his current partner but she continues to dissuade him.

PAST PSYCHIATRIC HISTORY:

- August – October 2014: Individual Therapy w. Linda Nielsen
- March-April 2015: Inpatient Substance Abuse treatment at Ft. Belvoir
- April 2015- February 2016: Medication Management w. Dr. Zembruska
- September 2016- Present: Medication Management w. Dr. Tobar

FAMILY PSYCHIATRIC HISTORY:

- Maternal Grandmother: Bipolar
- Sister: Bipolar, Substance Abuse

SUBSTANCE USE:

Caffeine Use: Yes	Cups/Date Equivalent: 4
Tobacco/e-cigs: none	Packs/Date Equivalent: N/A
Alcohol: 2-3 glasses 2-3 x weekly	
Illicit drug use: denied	

Previous substance abuse tx: 30-days Inpatient program at Ft. Belvoir in 2014

MEDICAL/SURGICAL HISTORY:

Taken from Dr. Tobar's AHLTA Note Dated 24 October 2016

- Penile warts (HPV)
- Neurotic excoriation (scalp picking when anxious)
- Asthma during childhood
- Allergic response to pets
- Recurrent intestinal pain (possibly lactose intolerance)
- PRK (2011)

CURRENT MEDICATIONS:

- Lexapro 20mg po daily

MENTAL STATUS EXAM:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in military uniform. He was cooperative and polite and engaged in session. He reported his mood as anxious and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

DIAGNOSTIC IMPRESSION DISCUSSION:

Axis I: Generalized Anxiety Disorder

Alcohol Abuse Disorder

Axis II: Diagnosis deferred on Axis II

Axis III: Deferred

Axis IV: Financial stress, lack of social support

Axis V: 65

Prognosis: () Excellent (X) Good () Fair () Guarded () Poor**Patient's capacity** to participate in and benefit from therapy is evidenced by:

(X) good insight/judgment, (X) a desire to resolve their disorder, (X) verbal agreement to the treatment plan

TREATMENT PLAN:**Setting:** (X) Outpatient () Inpatient () IOP () Other: _____**Safety Plan:**

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: [REDACTED]

DoD ID: 1286180538

Created: 30 Oct 2017

Overall health reported as: Good

Pain Level (0-10): 0

Currently treated: not answered

Suicidal Ideation Risk - C-SSRS score: 5 Past/Prep Behavior: Yes

past attempts: 3 (as of 09/06/2016)

Harm Others Risk over next week as of 9/6/2016 - None

Active Plan: N/A

Patient with access to weapons: No

Notes from current session:

Pt presents for his second follow-up with this provider. At our last meeting started Lexapro 5 mg po daily tapered up to 10 mg po daily after a week to target anxiety/irritability. . Today he states he has not had suicidal thoughts since our last meeting. He does feel less urge to drink alcohol. He is drinking 3 drinks (beers) around 304 nights per week. He continues to feel mood lability in the mornings. We reviewed his phq9 and gad7 scores, noting they both decreased from last visit. He is picking at his scalp less. When he took Lexapro at night he found it hard to sleep so he takes it in the morning now. We discussed how conversely he had felt fatigued on Zoloft. Pt says he was on leave last week and spent the week building a computer and playing video games, which he enjoyed. He still wonders sometimes 'what's the point' and continues to date a young woman even though he is not so interested in her, because he wants to company and she is pursuing him. He is taking 15 days of leave next month to visit his grandparents in California as they are elderly and he has not seen them in almost twenty years. He continues to have ongoing abdominal pain and is seeing GI about this. He was diagnosed with irritable bowel syndrome.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people , and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported**Depression** - PHQ2: 2 - Depressive Syndrome Unlikely

PHQ9: 13 - Minor depressive symptoms reported. Evaluation indicated.

Thoughts that you would be better off dead, or of hurting yourself in some way

Few or several days

Anxiety - GAD 2: 5 - Anxiety Syndrome Possible, see GAD7
 GAD 7: 15 - Moderate anxiety symptoms reported. Evaluation indicated.
PTSD - 4QPTSD: 3 - PTSD possible, see PCL. Evaluation indicated
 PCL-5: 37 - Some PTSD symptoms reported
ALCOHOL - AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT
 AUDIT: 13 - Harmful or Hazardous Alcohol Consumption likely
RELATIONSHIP ISSUES - CSI - Pt reports no significant other - no score
SLEEP ISSUES:
 Average hours of sleep per night: 6-7 Snore: No
 Average sleep latency: 0-15min Daytime Somnolence: Yes
OTHER - BAM: Risk/Protection/Use (subscales):

TBI/CONCUSSION SCREEN: Negative Screen**Rating scales:**

28SEP16 phq9= 11 (#9=1); gad7= 16
 24OCT16 phq9= 8 (#9=0); gad7= 12

Risk Assessment:**C-SSRS Baseline** (9/6/2016): 5 - Lifetime thoughts of suicide with plan or actual behavior endorsed.

Over lifetime, Wish to be Dead?	Yes
Over lifetime, Suicidal Thoughts?	Yes
Over lifetime, Suicidal Thoughts with Method?	Yes
Over lifetime, Suicidal Intent?	Yes
Over lifetime, Suicide Intent with Specific Plan?	Yes
Over lifetime, Suicide Behavior?	Yes
Most recent Suicidal Thoughts/Behaviors?	1-3 months ago
Suicidal Thoughts Duration?	Less than 1 hour
Suicidal Thought Frequency?	Less than once a week

C-SSRS Current: not taken**RISK FACTORS (Weaknesses):** (also see patient reported issues above in vitals)

<input checked="" type="checkbox"/> Male	<input type="checkbox"/> History of family/friend suicide
<input type="checkbox"/> Chronic medical conditions	<input checked="" type="checkbox"/> Impulsivity
<input checked="" type="checkbox"/> History of abuse	<input type="checkbox"/> Chronic pain

PROTECTIVE FACTORS (Strengths):

<input type="checkbox"/> Married, children	<input checked="" type="checkbox"/> Active treatment engagement
<input type="checkbox"/> Good coping/problem solving skills	<input checked="" type="checkbox"/> Hopefulness present
<input type="checkbox"/> Faith/religion commitment	<input type="checkbox"/> Positive future orientation

Allergies: nkda**Medications:** Lexapro 10 mg po daily.**Past Behavioral Health History:**

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.
 Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it.
 Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.
 Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost

custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)
 Asthma during childhood
 Allergic response to pets
 Recurrent intestinal pain (possibly lactose intolerance)
 PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes

Cups/Day Equivalent: 4

Tobacco/e-cigs: none

PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Learns best by: Pictures. Learning is adversely affected by: None.

Patient would not like family members involved in care.

Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in uniform.

Behavior/Orientation: Polite, friendly, and cooperative.

Abnormal Movements: normal gait. No abnormal movements apparent.

Rapport: easy to establish

Speech: normal tone and kinetics

Mood: mildly anxious

Affect: full

Thought Process: circumstantial

Thought Content: no current SI/HI/AVH

Judgment: wnl

Insight: wnl

Impulsivity: none at time of interview

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Unspecified Anxiety Disorder; Alcohol Use Disorder; Trichitillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will consider pharmacotherapy, psychotherapy

Intervention: increase Lexapro to 20 mg po daily. Counseled pt on risks/benefits and he consented to treatment. Monitor alcohol use.

Measure: gad7, pcl

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure:

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

☐ good insight/judgment, ☒ a desire to resolve their disorder, ☒ verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: ☐ Excellent ☐ Good ☐ Fair ☐ Guarded ☐ Poor

Follow-up: one month

Referrals: pt has therapy intake with Dr Paul on 18NOV

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: **SM has no duty restrictions necessitating a profile.** Patient meets the retention standards of Chap 3, AR 40-501 and AR 635-200 for fitness and suitability for continued service. Patient remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security clearance recommended at this time.

Is Service Member able to have access to sensitive information (to the level of current clearance)? Yes
Can Service Member perform MOS duties? Yes

 Tobacco Use: No, Alcohol Use: Yes,
 Pain Scale: 4/10 Moderate, Pain Scale Comments: abd

S/O Note Written by COPSEY, HELEN C. @ 04 Oct 2016 1617 EDT**Reason for Visit**

Visit for: Abdominal pain.

History of present illness

The Patient is a 31 year old male.

31 yo M here for abdominal pain. Reports a long history of GI symptoms, dating back to childhood. Symptoms have been more disruptive over the past few years. Notes generalized sharp abdominal pain about every other day, that peaks prior to defecation and is relieved after bowel movements. Typically has 1-2 soft-liquid stools per day, infrequently with urgency. Symptoms may be worse with intake of insoluble fibers. Also worse during physical activity and with increased anxiety/stress. Reports he has never been formally diagnosed and has not been on treatment for these symptoms. Does consume cheese several times per week, and splenda on a daily basis.

Of note, patient underwent CT A&P in 2012 for the same abdominal pain, which showed focal colitis at the hepatic flexure with proximal stool retention. Colonoscopy (McNally) in 2012 showed mild congestion in the sigmoid, but biopsies were unremarkable. A subsequent MRE was completely normal.

He saw GI earlier this year after he was noted to have a +serum AB to H.pylori. He was treated with triple therapy, and a stool test confirmed eradication in June.

Allergies

NKDA.

Past medical/surgical history**Reported:**

Past medical history
 Anxiety/depression

Surgical / Procedural: Prior surgery
 Tonsillectomy
 PRK

Medications: Medication history
 Lexapro

(I personally reviewed the medication history, allergy history and compliance with medications with this patient)

Surgical:

• Pre-op ASA class 1

Previous therapy

• History of possible limitations and risks do not include complications from anesthesia

Personal history

Tob: (-)

Etoh: (1-2 glasses of wine/ day)

Family history

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

No malignant neoplasm of large intestine
No malignant neoplasm of the gastrointestinal tract.

Review of systems**Systemic:** No fever, no chills, and no recent weight loss.**Otolaryngeal:** No mouth sores.**Cardiovascular:** No chest pain or discomfort.**Pulmonary:** No dyspnea.**Gastrointestinal:** No heartburn and no regurgitation. No early satiety, no nausea, no vomiting, no abdominal swelling, no tenesmus, no melena, no hematochezia, and no nocturnal diarrhea.**Musculoskeletal:** No arthralgias, new. No nonspecific pain, swelling, and stiffness.**Skin:** No rash, new.**Physical findings****Vital Signs:**

° Current vital signs reviewed.

Standard Measurements:

° Patient was not observed to be obese.

General Appearance:

° Awake. ° Alert. ° Well developed. ° Well nourished. ° In no acute distress. ° Patient did not appear uncomfortable. ° Not acutely ill. ° Not chronically ill.

Neck:

Appearance: ° Of the neck was normal.

Eyes:

General/bilateral:

Sclera: ° Showed no icterus.

Oral Cavity:

° Normal OP clear, Mallampati score = 1.

Chest:

° Visual inspection revealed no abnormalities.

Lungs:

° Normal CTA B.

Cardiovascular:

° System: normal RRR, no M or G.

Abdomen:

° Normal soft, NT/ND, +BS.

Neurological:

° Level of consciousness was normal. ° Oriented to time, place, and person.

Speech: ° Normal.

Gait And Stance: ° Normal.

Psychiatric:

Mood: ° Euthymic.

Affect: ° Normal.

Thought Processes: ° Not impaired.

Skin:

° General appearance was normal. ° No jaundice. ° No skin lesions.

Therapy

° Medical regimen review – medication reconciliation performed.

Amended Report Text:

ADDITIONAL HISTORY: CT examination with right-sided colonic thickening and equalization of small bowel. Recent colonoscopy and without lesion the terminal ileum a concern stenosis or inflammation of the distal ileum.

TECHNIQUE: Standard MR enterocleisis protocol; Three plane localizer, coronal FIESTA, axial T2 SS FSE, axial and coronal T2 SS FSE, axial and coronal FIESTA fat sat, axial SPGR in and out of phase, axial and coronal LAVA pre-and postcontrast MRI of the abdomen.

COMPARISONS: CT abdomen/pelvis 10/11/12

FINDINGS:

Bowel loops are adequately distended without focal stenosis, stricturing, or luminal narrowing. There is normal bowel peristalsis and motion observed on the cinematic images. Minimal mural thickening of the mid jejunum observed at the left upper quadrant without corresponding abnormal mucosal enhancement, stricturing or stenosis.

The liver and gallbladder are normal without intra-or extrahepatic biliary ductal dilatation. The spleen, pancreas, adrenals, and kidneys are normal.

No intra-abdominal mass or fluid collection. No enlarged abdominal or pelvic lymph nodes.

Osseous marrow signal is nonpathologic.

IMPRESSION:

No abnormal areas of enhancement or mural thickening within the gastrointestinal system, specifically evidence of active inflammation at the site of previously observed colitis on CT examination 10/11/12. Correlate with patient's symptomatology.

 Amended Report Text:

ADDITIONAL HISTORY: Abdominal pain.

TECHNIQUE: CT of the abdomen and pelvis was performed under standard abdomen/pelvis CT protocol with 5 mm axial helically acquired images obtained from the level of the diaphragm to the level of the pubic symphysis after the intravenous administration of 110 mL Isovue 370 and oral contrast. Coronal and sagittal reformatted images were also obtained.

COMPARISONS: Acute abdominal series 10/10/12.

FINDINGS:

Lung bases are clear.

Liver parenchyma and vasculature is unremarkable. Normal biliary tree without intra-or extrahepatic biliary ductal dilatation. Pancreas, spleen, adrenals, and kidneys are normal. No identifiable ureteral abnormalities. Fluid-filled urinary bladder is unremarkable.

Enteric contrast visualized to the level of the mid ileum. Stomach is normal. There is fecal material and air noted within the distal ileum extending to a mildly distended stool filled cecum. The appendix is identified and is normal. There is a focal area of vascular prominence involving the mesentery at the level of the hepatic flexure. The colon wall at this level appears mildly thickened but otherwise decompressed. The colon distal to the hepatic flexure is decompressed and normal in appearance.

Shotty subcentimeter mesenteric lymph nodes about the upper abdomen. No intra-abdominal mass or fluid collection. Vascular structures are normal in configuration.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Pelvic organs are unremarkable. No free pelvic fluid. No pelvic or inguinal lymphadenopathy.

Soft tissues, muscles, and osseous structures are unremarkable.

IMPRESSION:

Focal colitis at the level of the hepatic flexure with proximal stool retention and fecalization of small bowel. Findings are nonspecific and may be representative of an acute infection or inflammatory etiology such as Crohn's disease. Clinical correlation is recommended.

Note: Findings above were discussed with Dr. Hardware, via telephone at 0450 hours on 10/11/12.

Electronically signed by resident: Dr. JOSEPH G MOLLURA Date: 10/11/12 Time:07:22

A/P Written by COPSEY, HELEN C @ 04 Oct 2016 1623 EDT

1. Irritable bowel syndrome with diarrhea: Clinical history is consistent with IBS-D. This diagnosis was discussed with the patient in detail and all questions were answered. Goals of management were reviewed including options such as natural interventions/ dietary change/ stress management, all the way to low dose TCA therapy. He v/u and opts to proceed as detailed below.

PLAN:

1. Celiac panel.
2. Strict dairy free trial x 2 weeks.
3. Stop Splenda.
4. Pending progress, consider 2 week course of Xifaxan.
5. F/u with me directly via phone/email/relay health with updates.

Disposition Written by COPSEY, HELEN C @ 04 Oct 2016 1623 EDT

Released w/o Limitations

Follow up: as needed.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. 45 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Patient with access to weapons: No

History of Present Illness:

Pt presents for his first follow-up with this provider. At our last meeting we discussed another trial of SSRI for mood and anxiety as he didn't tolerate Zoloft previously; he wanted to think about it. Today he states he continues to feel guilt about how he functions in interpersonal relationships which leads him to feel suicidal. He continues to feel mood lability in the mornings. He is drinking around two glasses of wine per night. He last felt suicidal about two days ago without intent or plan. He continues to have ongoing abdominal pain and is seeing GI about this.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruzska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported**Depression** - PHQ2: 2 - Depressive Syndrome Unlikely

Risk Assessment:C-SSRS Baseline (9/6/2016): 5 - Lifetime thoughts of suicide with plan or actual behavior endorsed.

Over lifetime, Wish to be Dead? Yes

Over lifetime, Suicidal Thoughts? Yes

Over lifetime, Suicidal Thoughts with Method? Yes Yes

Over lifetime, Suicidal Intent? Yes Yes

Over lifetime, Suicide Intent with Specific Plan? Yes

Over lifetime, Suicide Behavior? Yes Number of events: 3

Most recent Suicidal Thoughts/Behaviors? 1-3 months ago

Suicidal Thoughts Duration? Less than 1 hour

Suicidal Thought Frequency? Less than once a week

C-SSRS Current: not taken**RISK FACTORS (Weaknesses):** (also see patient reported issues above in vitals)☒ Male ☐ History of family/friend suicide☐ Chronic medical conditions ☒ Impulsivity☒ History of abuse ☐ Chronic pain**PROTECTIVE FACTORS (Strengths):**☐ Married, children ☒ Active treatment engagement☐ Good coping/problem solving skills ☒ Hopefulness present☐ Faith/religion commitment ☐ Positive future orientation**Allergies:** nkda**Medications:** Patient denies taking medications/OTC meds/supplements.**Past Behavioral Health History:**

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4
 Tobacco/e-cigs: none PPD Equivalent:
 Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.
 Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old.
 Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.
 Highest level of education achieved is: High School graduate.
 Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.
 Patient reports religion, faith or spirituality DO NOT play an important role in life.
 Social support reported as satisfactory.
 Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure
 Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)
 Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None
 Patient denies treatment team needs to be aware of specific ethnic/cultural issues.
 Learns best by: Pictures. Learning is adversely affected by: None.
 Patient would not like family members involved in care.
 Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in uniform.
 Behavior/Orientation: Polite, friendly, and cooperative.
 Abnormal Movements: normal gait. No abnormal movements apparent.
 Rapport: easy to establish
 Speech: normal tone and kinetics
 Mood: mildly anxious
 Affect: full
 Thought Process: circumstantial
 Thought Content: no current SI/HI/AVH
 Judgment: wnl
 Insight: wnl
 Impulsivity: none at time of interview
 Cognition: grossly intact
 Fund of Knowledge: wnl

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Unspecified Anxiety Disorder, r/o PTSD; Alcohol Use Disorder, r/o Trichitillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will consider pharmacotherapy, psychotherapy

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Intervention: Start Lexapro 5 mg po daily x 1 week, then increase to 10 mg po daily. Counseled pt on risks/benefits and he consented to treatment. Monitor alcohol use.

Measure: gad7, pcl

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure:

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: [] Excellent [] Good [] Fair [] Guarded [] Poor

Follow-up: two weeks with this provider

Referrals: referred to therapist

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: **SM has no duty restrictions necessitating a profile.** Patient meets the retention standards of Chap 3, AR 40-501 and AR 635-200 for fitness and suitability for continued service. Patient remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security clearance recommended at this time.

Is Service Member able to have access to sensitive information (to the level of current clearance)? **Yes**

Can Service Member perform MOS duties? **Yes**

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Suicidal Ideation Risk - C-SSRS score: 5 Past/Prep Behavior: Yes

past attempts: 3 (as of 09/06/2016)

Harm Others Risk over next week as of 9/6/2016 - None Active Plan: N/A

Patient with access to weapons: No

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembrukska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Psychiatric ROS:

Service Member reports the following self-reported items on screening AFTER appointment:

General Distress - BASIS-24: 2.19 - Moderate to High level of general distress reported**Depression** - PHQ2: 2 - Depressive Syndrome Unlikely

PHQ9: 13 - Minor depressive symptoms reported. Evaluation indicated.

Thoughts that you would be better off dead, or of hurting yourself in some way

Few or several days

Anxiety - GAD 2: 5 - Anxiety Syndrome Possible, see GAD7

GAD 7: 15 - Moderate anxiety symptoms reported. Evaluation indicated.

PTSD - 4QPTSD: 3 - PTSD possible, see PCL. Evaluation indicated

PCL-5: 37 - Some PTSD symptoms reported

ALCOHOL - AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT

AUDIT: 13 - Harmful or Hazardous Alcohol Consumption likely

RELATIONSHIP ISSUES - CSI - Pt reports no significant other - no score**SLEEP ISSUES:**

Average hours of sleep per night: 6-7 Snore: No

Average sleep latency: 0-15min

Daytime Somnolence: Yes

OTHER - BAM: Risk/Protection/Use (subscales):**TBI/CONCUSSION SCREEN:** Negative Screen

Clinician notes for ROS:

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Risk Assessment:**C-SSRS Baseline (9/6/2016):** 5 - Lifetime thoughts of suicide with plan or actual behavior endorsed.

Over lifetime, Wish to be Dead?	Yes
Over lifetime, Suicidal Thoughts?	Yes
Over lifetime, Suicidal Thoughts with Method?	Yes
Over lifetime, Suicidal Intent?	Yes
Over lifetime, Suicide Intent with Specific Plan?	Yes
Over lifetime, Suicide Behavior?	Yes
Most recent Suicidal Thoughts/Behaviors?	1-3 months ago
Suicidal Thoughts Duration?	Less than 1 hour
Suicidal Thought Frequency?	Less than once a week

C-SSRS Current: not taken**RISK FACTORS (Weaknesses):** (also see patient reported issues above in vitals)

<input checked="" type="checkbox"/> Male	<input type="checkbox"/> History of family/friend suicide
<input type="checkbox"/> Chronic medical conditions	<input checked="" type="checkbox"/> Impulsivity
<input checked="" type="checkbox"/> History of abuse	<input type="checkbox"/> Chronic pain

PROTECTIVE FACTORS (Strengths):

<input type="checkbox"/> Married, children	<input checked="" type="checkbox"/> Active treatment engagement
<input type="checkbox"/> Good coping/problem solving skills	<input checked="" type="checkbox"/> Hopefulness present
<input type="checkbox"/> Faith/religion commitment	<input type="checkbox"/> Positive future orientation

Allergies: nkda**Medications:** Patient denies taking medications/OTC meds/supplements.**Past Behavioral Health History:**

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)
 Asthma during childhood
 Allergic response to pets
 Recurrent intestinal pain (possibly lactose intolerance)
 PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Unspecified Anxiety Disorder, r/o PTSD; Alcohol Use Disorder; r/o Trichitillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: diagnostic clarification

Goal: clarify diagnosis

Objective: pt will return for follow-up

Intervention: serial evaluations, chart review, lab evaluation

Measure: pt self-report, rating scales

Problem #2: anxiety

Goal: pt will experience decrease in anxiety

Objective: pt will consider pharmacotherapy, psychotherapy

Intervention: discussed considering alternative SSRI to Zoloft which he didn't tolerate. Will further discuss pharmacotherapy at next visit after eliciting further history. Monitor alcohol use.

Measure: gad7, pci

Problem #3: safety

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure:

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of below medication plan with patient who stated understanding and agreement with plan. Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Prognosis: [] Excellent [] Good [] Fair [] Guarded [] Poor

Follow-up: two weeks with this provider

Referrals: refer to therapist at next visit.

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

Profile: **SM has no duty restrictions necessitating a profile.** Patient meets the retention standards of Chap 3, AR 40-501 and AR 635-200 for fitness and suitability for continued service. Patient remains world-wide qualified and cleared for any TDY or deployments. No alterations to duty status or security clearance recommended at this time.

SKJ

S/O Note Written by HICKEY, LINDSEY S @ 25 Aug 2016 1715 EDT**Chief complaint**

The Chief Complaint is: Anxiety.

History of present illness

The Patient is a 31 year old male.

This is the initial visit to the IBHC clinic.

Source of information was self.

- Pt was given IBHC brochure describing the behavioral health program. Discussed with patient model of service to include the limits of confidentiality (i.e. abuse reporting, suicide intervention, etc.) and short-term intervention focused approach

- Pt indicated understanding.

Patient was seen for 30 minute IBHC appointment.

Patient was seen by a trainee under the supervision of a licensed mental health professional. Patient indicated an understanding of this.

....

Feeling tired (fatigue).

Decreased appetite.

Decreased concentrating ability.

Sleep disturbances, loss of pleasure, and frequent thoughts of death /morbid ideation.

Previous history of visit is not deployment-related.

Pain Severity 0 / 10.

<<Note accomplished in TSWF-IBHC Anxiety tab>>

Description of Symptoms: Extreme mood swings with depression and anxiety, irritability, concentration problems, poor sleep, fatigue, racing heart and thoughts, trouble relaxing, and worrying. PT reported dry heaving episodes for the past 2 years and pulling the hair off a spot on his scalp since 2008. Several times a week he has a "tingling sensation" with a mood change where he will suddenly smile or frown. PT has an appointment with Dr. Tobar in outpatient behavioral health on 06SEP16.

PT reported having passive SI since he was a child. He reported 2 prior suicide attempts when he was in high school: one by overdosing on OTC medicine and one by overdosing on alcohol. His last plan was to overdose on helium before self-referring to substance abuse treatment last year. He last had passive SI ("why even bother") 3 weeks ago, with no plans or intent. PT denied any current SI, plans, or intent.

Duration of Problem: PT has experienced symptoms since his first ship tour in 2006. Symptoms have worsened since he re-enlisted last October.

Factors correlated with onset: Anxiety started after PT joined the Navy in 2006. He regrets re-enlisting last October, and because he waited so long to re-enlist he had last pick for orders. Subsequently he was stationed in the same same environment with the same work stress.

Frequency of symptoms: Symptoms occur every day.

Severity of symptoms: Depression symptoms from PHQ-9 are in the mild range. Anxiety symptoms from GAD-7 are in the moderate range.

Psychosocial factors: Occupational stress and minimal social support.

Aggravating/alleviating factors: Aggravating factors include occupational stress and feeling disconnected from others. Alleviating factors include cooking and programming.

Current tx: None

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Past tx: PT began behavioral health treatment in 2012.

Functional impact: Symptoms negatively impact PT's functioning at home and work.

Anxiety Intervention:

[x] Discussed various factors related to the development and maintenance of anxiety (including biological, cognitive, behavioral, and environmental factors).

[x] Developed Crisis Response plan.

[x] Trained in strategies for increasing balanced thinking.

[x] Provided IBHC handout on unhelpful thinking styles.

Current medication

None.

Past medical/surgical history**Reported:**Medical: Reported medical history Irritable bowel syndrome
Parageusia

.....BHM-20 Life Functioning - Severe distress.....

Personal history

Behavioral: Caffeine use 4 cups of coffee per day. No tobacco use history.

Alcohol: Alcohol use 3 days a week, 2 glasses of wine each day.

Review of systems

Neurological: No disorientation.

Psychological: A desire to continue living, not thinking about suicide, not having a suicide plan, and no stated intent to commit suicide. No homicidal thoughts, not thinking of a way to do it, and without a stated intent to kill. No impulsive behavior.

Physical findings**General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° No disorientation was observed - oriented to place, person, time, and situation. ° No hallucinations. ° Memory was unimpaired. ° Remote memory was not impaired. ° Recent memory was not impaired. ° Judgement was not impaired.

Speech: ° Normal - regular rate, non-pressured. ° Rate was normal. ° Rate was not slowed. ° Not pressured. ° Tone was not a monotone. ° Volume was normal. ° No articulation abnormalities. ° No language abnormalities were demonstrated.

Psychiatric:

Demonstrated Behavior: ° No decreased eye-to-eye contact was observed.

Attitude: ° Cooperative.

Mood: ° Euthymic. ° Not depressed. ° Not anxious.

Affect: ° Normal. ° Not labile. ° Not flat. ° Not constricted. ° Showed no irritability. ° Congruent with the mood.

Thought Processes: ° Not impaired - they were linear, logical, and goal directed. ° Evaluation of connectedness showed no deficiency. ° Attention demonstrated no abnormalities. ° Attention span was not decreased.

Thought Content: ° Insight was intact. ° No delusions.

• **DEPRESSION SCREENING / MONITORING (PHQ-9)**

- [1] Little interest or pleasure in doing things
- [1] Feeling down depressed or hopeless
- [0] Trouble sleeping or sleeping too much
- [1] Feeling tired or little energy
- [0] Poor appetite or overeating
- [0] Feeling bad about self
- [3] Trouble concentrating on things
- [2] Moving or speaking slowly or being restless
- [0] Thoughts that you would be better off dead

Difficulty doing work, taking care of things at home, or getting along with other people?

[] Not at all [] Somewhat [x] Very [] Extremely

• **Generalized Anxiety Disorder Screening:**

- [3] 1. Feeling nervous, anxious, or on edge
- [2] 2. Not being able to stop or control worrying
- [3] 3. Worrying too much about different things
- [2] 4. Trouble relaxing
- [1] 5. Being so restless that its hard to sit still
- [3] 6. Becoming easily annoyed or irritable
- [0] 7. Feeling afraid as if something awful might happen

Difficulty doing work, taking care of things at home, or getting along with other people?

[] Not at all [] Somewhat [x] Very [] Extremely

• **Counseling/Education**

Anxiety Recommendations for patient:

1. Identify and challenge at least one maladaptive thought per day.
2. Engage in at least one enjoyable activity per week.
3. Follow up with outpatient behavioral health.
4. Use crisis response plan if having SI or crisis.
5. RTC if symptoms persist or worsen.

Anxiety Recommendations for PCM Team:

1. Monitor for safety.
2. Monitor symptoms for improvement.

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

A/P Last Updated by HICKEY,LINDSEY S @ 25 Aug 2016 1714 EDT

1. Generalized anxiety disorder: 31yo PT with history of anxiety, depression, and alcohol abuse seen f2f for 30min initial appt. PT presents with sys secondary to occupational stress and limited social support. Sys are consistent with Generalized Anxiety Disorder. PT also has SI history with two previous attempts and one previous plan. PT reported last having passive SI 3 weeks ago with no plan or intent; he denied any current SI, plans, or intent. Developed crisis response plan with PT with triggers, coping skills, and resources for SI or crisis. PT has an appointment with Dr. Tobar in outpatient behavioral health on 06SEP16. PT was encouraged to RTC if symptoms persist or worsen. PT appears to be in the preparation stage of change and agreed to implement the recommendations made during today's appt. RTC as needed.

Anxiety Recommendations for patient:

1. Identify and challenge at least one maladaptive thought per day.
2. Engage in at least one enjoyable activity per week.
3. Follow up with outpatient behavioral health.
4. Use crisis response plan if having SI or crisis.
5. RTC in symptoms persist or worsen.

Anxiety Recommendations for PCM Team:

1. Monitor for safety.
2. Monitor symptoms for improvement.

Discussed with LT Hickey and plan reviewed with PT.

Provider: XYDAKIS, MICHAEL S**Reason for Appointment:**

Unspecified disturbances of smell and taste

Appointment Comments:

emh

S/O Note Written by XYDAKIS, MICHAEL S @ 07 Jun 2016 1341 EDT**Chief complaint**

The Chief Complaint is: 31 active duty navy from Ft Meade referred by colleague (dr David Thompson) for dysgusia of approximately 8 months duration. Specifically, patient indicates that on 16 Oct 2015, he was making pizza and noticed the alteration in taste. He presented to his nurse practitioner on 9 Nov 2015 and was referred to ENT. Smell is fine. NO tobacco (social smoker about 9 years ago). Patient does have a h/o alcohol dependence requiring counseling (notes in AHLTA indicate that therapy began in Aug 2014). MRI Brain (15 April 2016) = Normal olfactory eloquent structures.

History of present illness

The Patient is a 31 year old male.

He reported: Past medical history reviewed, problem list reviewed, medication list reviewed, family history reviewed, and surgical history reviewed.

Past medical/surgical history**Reported:**

Recent Events: An active illness Longstanding history of irritable bowel syndrome. History of H. Pylori and GERD (followed by GI).

Physical findings**Neck:**

• Neck: No palpable adenopathy.

Nose:

Right Side Of Nose:

• Examined.

Left Side Of Nose:

• Examined Moderate nasal septal deflection to the left with fracture / dislocation at the bony cartilagenous junction. No infectious, inflammatory nor obstructive pathology noted.

Oral Cavity:

• General condition was good S/p tonsillectomy. + discoloration and brownish/green film noted on posterior 1/3 of the tongue.

Mucosa otherwise pale pink and moist. + discoloration of the teeth.

Tongue: • Mucositis scale.

A/P Written by XYDAKIS, MICHAEL S @ 07 Jun 2016 1356 EDT**1. Unspecified disturbances of smell and taste****2. Glossitis**

3. Gastro-esophageal reflux disease without esophagitis: Sniffen extended battery 16 panel odorant test performed. Patient scored 16/16 with rapid, crisp reliable responses. Olfactory threshold testing performed. Patient scored 8/16 which is normal for age. Olfactory discrimination was normal. Burghart taste strips and sprays administered. Patient was able to discern tastes (sweet, salty, sour, bitter) at even the lowest concentrations. Hence, completely normal taste. A/P: Dysgusia due to mild glossitis which is due to GERD up to the level of the hypopharynx and base of tongue. Patient is scheduled to see GI in the next week or so. Likely his symptomatology will resolve once his acid reflux is under control and the tongue is no longer inflamed. Would consider Nystatin or mycelex oral troches. However, it would be preferable to address the underlying cause of the problem (i.e. Acid reflux) and see if the tongue inflammation resolves. Patient understands and agrees with this approach. He will send me an e-mail to assess interval change.

Pain Scale Comments: Cramping intermittent pain in the IntestinesS/O Note Written by SHAH,NISHA AMISH @ 11 May 2016 1523 EDT**Chief complaint**

The Chief Complaint is: + h pylori test.

History of present illness

The Patient is a 31 year old male.

<<Note accomplished in TSWF-CORE>>

31 year old male referred from ENT when during w/u of dysgeusia was found to + serum H pylori Ab and presents for further management. Patient states he has never been treated for h pylori.

He also states that he has had 'ibs pain' since age 15. The pain is in the upper abdomen described as sharp and does not radiate. The pain can last minutes to longer and resolves once he goes to the bathroom having a soft stool; bristol type 5-6. Episodes occur weekly and are triggered by certain foods (spicy foods/fiber filled foods).

Of note, he went to the ED a few years ago for similar abdominal pain, he was then seen in the GI clinic and found to have a normal MRE after initial colonoscopy was concerning for thickened folds. He was lost to follow up.

Heartburn burning sensation - 2x per month, abdominal pain, and diarrhea.

AllergiesAllergies Verified and Updated
NKDA.**Current medication**Including OTCs, vitamins, herbals, supplements, etc.
Albuterol prn

Denies otc/herbals/supplements.

Past medical/surgical history**Reported:**

Medical: Reported medical history

SAR

He denies any other medical issues.

Surgical / Procedural: Surgical / procedural history None.

Personal history

Social history reviewed Denies tob/etoh.

Family historyFamily medical history
No hx of celiac/IBD

No hx of GI malignancies

Mom and grandmother with also 'stomach problems'.

Review of systems**Systemic:** Not feeling tired (fatigue). No fever, no chills, and no night sweats.**Eyes:** No eye pain. No red eyes.**Cardiovascular:** No chest pain or discomfort.**Pulmonary:** No dyspnea and no cough.**Gastrointestinal:** Appetite not decreased. No dysphagia and no pain on swallowing. No nausea, no vomiting, no hematemesis, no jaundice, no bright red blood per rectum, and no constipation.**Musculoskeletal:** No localized joint pain.**Skin:** No rash.**Physical findings****Vital Signs:**

• Temperature: Reviewed. • RR: Reviewed. • PR: Reviewed. • Blood pressure: Reviewed.

General Appearance:

• Normal. • Well developed. • Well nourished. • In no acute distress.

Neck:

Appearance: • Of the neck was normal.

Eyes:

General/bilateral:

External: • Conjunctiva exhibited no abnormalities.

Sclera: • Normal.

Ears:

General/bilateral:

Outer Ear: • Normal.

Oral Cavity:

Lips: • Showed no abnormalities.

Buccal Mucosa: • Examination showed no abnormalities.

Pharynx:

• Pharynx: MC3.

Oropharynx: • Normal. • Tonsils showed no abnormalities.

Lungs:

• Respiration rhythm and depth was normal. • Exaggerated use of accessory muscles for inspiration was not observed.

• Clear to auscultation. • No wheezing was heard. • No rhonchi were heard. • No rales/crackles were heard.

Cardiovascular:

Heart Rate And Rhythm: • Normal.

Heart Sounds: • Normal S1 and S2. • No gallop was heard. • No click was heard. • No pericardial friction rub heard.

Murmurs: • No murmurs were heard.

Abdomen:

Visual Inspection: • Abdomen was not distended.

Auscultation: • Bowel sounds were not diminished or absent.

Palpation: • Abdomen was soft. • No abdominal guarding. • Abdominal non-tender Mild ttp in RLQ. • No mass was palpated in the abdomen.

Liver: • Normal to palpation.

Spleen: • Normal to palpation.

Hernia: • No hernia was discovered.

Musculoskeletal System:

Functional Exam:

General/bilateral: • Mobility was not limited.

Neurological:

• Oriented to time, place, and person.

Gait And Stance: • Normal.

Psychiatric:

Mood: • Euthymic.

Affect: • Normal.

Skin:

• Showed no ecchymosis. • Temperature was normal. • No skin lesions.

A/P Last Updated by SHAH,NISHA A @ 11 May 2016 1553 EDT

1. Helicobacter pylori [H. pylori] as the cause of diseases classified elsewhere B96.81: 31 year old male with incidental finding of h pylori, unlikely related to dysphagia but would be interested at follow up to see if treatment affects symptoms. As it is a carcinogen, would recommend therapy. No exposure to antibiotics in last 6-8 months, will do triple therapy. Patient counseled on importance of compliance as well as confirmation of eradication two weeks after stopping PPI therapy.

Medication(s): -PANTOPRAZOLE--PO 40MG TBDR - TAKE ONE TABLET BY MOUTH TWICE A DAY FOR TWO WEEKS #28 RF0 Ordered By: SHAH,NISHA A Ordering Provider: SHAH, NISHA AMISH
 -AMOXICILLIN--PO 500MG CAP - TAKE TWO CAPSULE BY MOUTH TWICE A DAY FOR TWO WEEKS #56 RF0 Ordered By: SHAH,NISHA A Ordering Provider: SHAH, NISHA AMISH
 -CLARITHROMYCIN--PO 500MG TAB - TAKE ONE TABLET BY MOUTH TWICE A DAY FOR FOURTEEN DAYS #28 RF0 Ordered By: SHAH,NISHA A Ordering Provider: SHAH, NISHA AMISH
 Laboratory(ies): -H PYLORI AG, EIA (Routine): to be done two weeks after stopping protonix Ordered By: SHAH,NISHA A Ordering Provider: SHAH, NISHA AMISH

2. Irritable bowel syndrome with diarrhea K58.0: No red flags and triggers seem to be primarily food/stress. Will first focus on understanding triggers with food diary and assess if high fodmap (sheet given). After two week of observation, asked that he eliminate one food a week from his triggers. Plan to see back in 6-8 weeks and decide next step in management.

Disposition Last Updated by SHAH,NISHA A @ 11 May 2016 1612 EDT**Released w/o Limitations**

Follow up: 6 to 8 week(s) in the GI CL BE clinic or sooner if there are problems. - Comments: Case discussed with GI staff, Dr. Laczek, who agrees with above plan.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding.

Tuberculosis Exposure Risk Assessment Version: 3 Completed On: 22 Apr 2016

1. Since your last Tuberculosis Exposure Questionnaire were you exposed to anyone known to have or suspected of having active tuberculosis(i.e. with persistent cough, weight loss, night sweats, and/or fever)? No

2. Since your last Tuberculosis Exposure Questionnaire or Post Deployment Health Assessment (DD Form 2796), did you have direct & prolonged contact with any individuals of the following groups: refugees or displaced persons: patients hospitalized with tuberculosis, prisoners, or homeless shelter populations? No

3. Write the name of any country or countries where you have traveled or deployed to since your last Tuberculosis Exposure Questionnaire.: N/A

4. During this travel, did you have prolonged direct contact with the local population? Prolonged direct contact is generally understood as having been within six feet of a person with a bad continuous cough for at least eight consecutive hours on a single day, or for a total of at least fifteen hours per week of a multi-week stay.: No

5. Have you had a prior history of TB or prior treatment for Latent TB?: No

6. PROVIDER: Have you recently had a chronic cough AND did you have any of the following at the same time? Fever, Coughed up Blood, Unexplained Weight Loss, Night Sweats: No

7. PROVIDER: Since your last risk assessment, did you develop any of the following conditions: organ transplant; HIV Infection; Immunosuppression secondary to use of prednisone (equivalent of >15mg/day> 1 month) or other immunosuppressive medication such as Humira, Enbrel or Remicade?: No

8. PROVIDER: Since your last TB risk assessment did you develop any of the following conditions: diabetes, silicosis, cancer of head or neck, Hodgkin's disease, leukemia, end stage renal disease, intestinal bypass or gastrectomy, chronic malabsorption syndrome, low body weight (10% or more below ideal weight) or injection drug use?: No

EPWORTH Sleepiness Scale Version: 1 Completed On: 22 Apr 2016

3. How likely are you to doze off or fall asleep while INACTIVE in a meeting, theater, or other similar place?: 0
4. How likely are you to doze off or fall asleep as a PASSENGER in a car for an HOUR without a break?: 3
5. How likely are you to doze off or fall asleep while LYING DOWN to rest in the afternoon when circumstances permit?: 3
6. How likely are you to doze off or fall asleep while sitting and TALKING to someone?: 0
7. How likely are you to doze off or fall asleep while SITTING QUIETLY after a lunch without alcohol?: 2
8. How likely are you to doze off or fall asleep in a CAR, while stopped for a few minutes in the traffic?: 2

S/O Note Written by TACKIE, DIANE A @ 22 Apr 2016 0952 EDT**Chief complaint**

The Chief Complaint is: PHA.

Reason for Visit

Visit for: FACE TO FACE PHA, U.S. NAVY AND HRA REVIEW.

History of present illness

The Patient is a 31 year old male.

Annual Periodic Health Assessment includes record review/assessment/counseling of avoidable health risk factors, clinical preventive services, deployment health history, and individual medical readiness assessment IAW MANMED.

Past medical history reviewed and problem list reviewed. Medication reconciliation performed. Medication list reviewed, family history reviewed, and surgical history reviewed.

- Military service [] Y [X] N Deployed since previous PHA
 [] Y [X] N Post-Deployment Health Assessment completed
 [] Y [X] N Post-Deployment Health Reassessment completed
 [] Y [X] N Post-Deployment labs/tests completed
 [] Y [X] N Deployment/Shipboard limiting conditions identified.

Patient identified by first and last name as well as DOB. 31yo Male U.S. Navy Active Duty Service Member presents for Face to Face PHA. SM states he is not on Limited Duty or Light Duty Status at the current time. Refer to the A/P section of this SF 600 for HRA documentation.

Past medical/surgical history**PMH DISCUSSED WITH SM**

- Unspecified disturbances of smell and taste, Parosmia: under the care of Otolaryngeal Clinic, last seen 19 April 2016, MRI wnl.
- Helicobacter pylori [H. pylori] as the cause of diseases classified elsewhere: referred to GI per ENT Clinic.
- Pain in left ankle and joints of left foot: under the care of Physical Therapy Clinic, last seen 05 April 2016.
- Alcohol dependence, uncomplicated: SM states he has completed treatment. Last seen by BH Clinic last in Feb 2016.

Reported:

- Medical: Not currently wearing eyeglasses If Yes, do they have 2 pairs? [] Yes [] No [X] N/A. No allergies – NKDA.
 Surgical / Procedural: Surgical / procedural history – PRK OD/OS 2011.
 Medications: Medication history – SM states he is not taking any medications at the current time.
 Tests: A hearing test was performed 1) Is there a DD 2215 (baseline hearing test) in the health record? [X] Yes [] No
 2) Is there a complaint of tinnitus that has not been addressed? [] Yes [X] No
 3) Is there a complaint of changes in hearing since the last hearing test? [] Yes [X] No
 4) Is there an in-depth audiometric evaluation in the record when existing hearing tests shows thresholds in either ear at 500, 1000 and 2000 Hz that average 30 dB or greater or 45 dB or greater at 3000 Hz or 55 dB or greater at 4000 Hz? [] Yes [X] No
 5) If the patient is enrolled in a Hearing Conservation Program, has there been a monitoring audiogram within the past 12 months? [] Yes [] No [X] N/A.

Personal history

Behavioral: No tobacco use.

Alcohol: Alcohol SM reports consuming alcohol 3 times per week with 2-3 drinks per occasion.

Work: Occupation Computer Network Intelligence Analyst, Fort Meade.

Marital: Marital history Single, no children.

Review of systems

Otolaryngeal symptoms– parosmia, taste and smell disturbances

Gastroenterology symptoms– H. pylori positive, heart burn, stomach discomfort

Musculoskeletal symptoms– left foot and ankle pain

Skin symptoms– Anogenital (venereal) warts, being managed by Derm Clinic, last seen 24 Feb 2016

Behavioral Health symptoms– alcohol dependence previous history, resolved.

Systemic: No systemic symptoms.**Head:** No head symptoms.**Neck:** No neck symptoms.**Eyes:** No eye symptoms.**Breasts:** No breast symptoms.**Cardiovascular:** No cardiovascular symptoms.**Pulmonary:** No pulmonary symptoms.**Genitourinary:** No genitourinary symptoms.

Face to Face PHA completed and updated in MRRS.
 TB Exposure Risk Assessment Questionnaire complete. Medications reconciled.
 Copy of IMR given to SM. Next PHA one year.

MEDICAL READINESS STATUS: Fully Medically Ready.

Reviewed Immunization Records in AHLTA and on IMR, Tdap and Influenza vaccines up to date.

Procedure(s): -(99173) Screening Test Of Visual Acuity, Quantitative, Bilateral x 1 ADDITIONAL PROVIDER(S): WOOTEN, LORI A

2. Counseling, unspecified Z71.9: SM educated to the PHA visit. Reviewed HRA survey results, discussed, education provided. Epworth Sleepiness Scale review and discussed.

SM educated to Skin Cancer Prevention. To lower your skin cancer risk, protect your skin from the sun and avoid indoor tanning. CDC recommends these easy options:

- Stay in the shade, especially during midday hours.
- Wear clothing that covers your arms and legs.
- Wear sunglasses that block both UVA and UVB rays.
- Use sunscreen with SPF 15 or higher and both UVA and UVB protection.
- Avoid indoor tanning.
- Consider your Skin cancer risk factors: Personal history of skin cancer or precancerous skin lesions, tendency to freckle or burn easily, lots of sun exposure throughout your life, family history of skin cancer
- Perform a thorough skin check regularly, preferably once a month. Do this in a brightly lit room in front of a full-length mirror.

The Patient is a 31 year old male.

Annual Periodic Health Assessment includes record review/assessment/counseling of avoidable health risk factors, clinical preventive services, deployment health history, and individual medical readiness assessment IAW MANNED.

Military service [] Y [X] N Deployed since previous PHA

[] Y [X] N Post-Deployment Health Assessment completed

[] Y [X] N Post-Deployment Health Reassessment completed

[] Y [X] N Post-Deployment labs/tests completed

[] Y [X] N Deployment/Shipboard limiting conditions identified

Past medical/surgical history**Reported:**

Medical: Not currently wearing eyeglasses If Yes, do they have 2 pairs? [] Yes [] No. An allergy Feathers, Cats.

Tests: A hearing test was performed 1) Is there a DD 2215 (baseline hearing test) in the health record? [] Yes [X] No

2) Is there a complaint of tinnitus that has not been addressed? [] Yes [X] No

3) Is there a complaint of changes in hearing since the last hearing test? [] Yes [X] No

4) Is there an in-depth audiometric evaluation in the record when existing hearing tests shows thresholds in either ear at 500, 1000 and 2000 Hz that average 30 dB or greater or 45 dB or greater at 3000 Hz or 55 dB or greater at 4000 Hz? [] Yes [] No

5) If the patient is enrolled in a Hearing Conservation Program, has there been a monitoring audiogram within the past 12 months? [] Yes [] No.

Physical findings**Vital Signs:**

* Current vital signs reviewed.

The following Text Note Was Deleted by WOOTEN, LORI A @ 22 Apr 2016 0923 EDT:

Note Written by WOOTEN, LORI A @ 22 Apr 2016 0923 EDT

You rated your health as **Good**. Personal perception about how healthy you are is usually quite accurate. ; Your Personal Health Risk Appraisal Report identified **3 risk categories** from the answers you provided that relate to overall health, which places you in a **MEDIUM** risk group. Numbers of risk factors have been shown to predict future health care use and health care costs. It is important for individuals to move toward the "low risk" category by reducing the number of behavioral risks, and for those already at low risk, to avoid increasing the number of risk factors over time.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

High Risk	= 5 or more risk categories	You reported 3 categories, which places you at MEDIUM risk. The categories you scored "unhealthy" on included: <ul style="list-style-type: none"> • Stress Management • Sexual Health • Nutrition
Medium Risk	= 3-4 risk categories	
Low Risk	= 0-2 risk categories	

Body Mass Index (Note the limitations of BMI below) ; *Normal Weight* ;;;;
http://www.cdc.gov/nccdphp/dnpa/bmi/adult_BMI/about_adult_BMI.htm

YOUR BODY MASS INDEX = 24.4.

Both being overweight or being underweight are related to increased risk of disease and death. Among most Americans, BMI is a reliable indicator of total body fat. It is an inexpensive and easy-to-perform method of screening for weight categories that may lead to health problems. Limitations of BMI are that it may overestimate body fat in athletes and others who have a muscular build or underestimate body fat in individuals who lack lean muscles mass.

TOBACCO USE; *Never used tobacco* ;;;; <http://www.ucanquit2.org> ; ;

<http://betobaccofree.hhs.gov/>

You are doing the single most important thing to stay healthy! Not smoking saves you money (over \$2000/year for one pack per day), helps you avoid many tobacco related diseases, and adds to your fitness level and overall health.

TOBACCO USE; *Never used tobacco* ;;;; <http://www.ucanquit2.org> ; ;

<http://betobaccofree.hhs.gov/>

Not using smokeless tobacco is a great choice. You can avoid oral cancer, tooth and gum disease, and maintain a fresh and clean mouth.

ALCOHOL USE; *No* ;;;; <http://www.nlm.nih.gov/medlineplus/alcoholconsumption.html>
ALCOHOL USE; *Once or twice per year* ;;;;
<http://www.rethinkingdrinking.niaaa.nih.gov/>

Many Sailors and Marines occasionally drink more heavily than usual during celebrations or special events. Plan ahead to avoid alcohol-related incidents. DUIs will put your career in danger.

ALCOHOL USE; *Never (i.e. not during the past year)* ;;;;
<http://www.rethinkingdrinking.niaaa.nih.gov/>

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

You are being a responsible Sailor or Marine by never driving drunk or riding with someone who has been drinking. You can also help fellow Sailors and Marines avoid alcohol related incidents by looking out for those who try to drink and drive - and help them get home safely.

INJURY PREVENTION; *Always* ;;;; <http://www.nhtsa.gov/Driving+Safety>

By always using your seat belt, you decrease your risk of serious injury or death after an accident by about 50%.

INJURY PREVENTION; *Does not apply to me / None recommended* ;;;; <http://www.nhtsa.gov/Driving+Safety>

If you ride these vehicles in the future, a helmet will provide significant protection against head injury and death. A large portion of medical, disability, and rehabilitation costs from these head injuries are paid for by the general public.

INJURY PREVENTION; *Does not apply to me / None recommended* ;;;; <http://www.cdc.gov/niosh/topics/safety.html>

If you visit work sites, encounter an environmental hazard, or work at home, use appropriate safety equipment

STRESS MANAGEMENT; *Somewhat satisfied* ;;;; <http://www.nlm.nih.gov/medlineplus/stress.html> ;;;; <http://afterdeployment.dcoe.mil>

You are only somewhat satisfied with your life. Life satisfaction is a common goal that we as human beings strive to achieve. Work, relationships and social activities can all contribute to life satisfaction. Look to these sources for improving your level of satisfaction.

STRESS MANAGEMENT; *Most of the time* ;;;; <http://www.med.navy.mil/sites/nmcscd/nccosc/serviceMembersV2/stressManagement/theStressContinuum/Pages/default.aspx> ;;;; <http://startmovingforward.dcoe.mil>

Long-term and short-term stress in your work or at home may increase your risk of cardiovascular disease and impact on your personal and professional relationships. Problem-solving or discussing possible solutions with someone else may help reduce or eliminate some of your stress.

STRESS MANAGEMENT; *Most of the time* ;;;; <http://www.helpguide.org/topics/relationships.htm> ;;;; <http://afterdeployment.dcoe.mil>

Expressing your feelings can help you see that you are not alone in how you feel. Talking with others can also provide you with strategies to successfully manage your concerns.

SEXUAL HEALTH; *Most of the time* ;;;; http://nationalcoalitionforsexualhealth.org/tools/communicating-to-the-public/document/SexualHealthGuide_national.pdf

Choosing to use a latex condom consistently and correctly each time you have sex will significantly reduce your risk of acquiring a sexually transmitted infection

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: ***-**-****

DoD ID: 1286180538

Created: 30 Oct 2017

PHYSICAL ACTIVITY; 3 weeks per month ;;;;<http://www.cdc.gov/physicalactivity/everyone/guidelines/adults.html>

To promote and maintain health, all healthy adults aged 18-64 years need moderate-intensity aerobic activity for a minimum of 150 minutes each week or vigorous-intensity aerobic activity for 75 minutes each week. Combinations of moderate- and vigorous-intensity activity can be performed to meet this recommendation. Exercise sessions can be broken up into as little as 10 minutes at a time.

PHYSICAL ACTIVITY; 2 days per week ;;;;<http://www.cdc.gov/physicalactivity/everyone/guidelines/adults.html>

Muscle-strengthening activities should work all the major muscle groups of your body (legs, hips, back, chest, abdomen, shoulders, and arms). To gain health benefits, muscle-strengthening activities need to be done to the point where it is hard for you to do another repetition without help. Adding muscle allows you to do more activities, improves appearance, and reduces the risk of several chronic diseases.

NUTRITION; At least 3-5 times per week or more ;;;;<http://www.cdc.gov/nutrition/everyone/basics/fat/index.html>

Some dietary fat is needed for good health, but high levels of fat in your diet may lead to excessive weight gain and increase your risk of certain cancers. Eating foods high in saturated and trans-fats also increases your risk of heart disease. Select foods low in saturated fats, trans fats, and cholesterol; eat plenty of whole grains, fruits and vegetables; and choose low fat milk products and lean meats.

NUTRITION; Less than one ;;;;<http://www.cdc.gov/nutrition/everyone/fruitsvegetables/index.html>

The national goal for Americans is to consume at least two servings of fruits per day. Fruits and vegetables contain essential vitamins, minerals, and fiber that may help protect you from chronic diseases and can make weight control easier. The actual number of cups of fruits and vegetables needed daily also depends on an individual's age, gender, and level of physical activity.

SUPPLEMENTS; Seldom ;;;; <http://humanperformancecenter.org/dietary-supplements>

People choosing to supplement their diets with herbals, vitamins, minerals, or other substances need to know about the products they choose so that they can make informed decisions about them. The choice to use a dietary supplement can be a wise decision that provides health benefits. However, under certain circumstances, these products may be unnecessary for good health or they may even create unexpected risks or interact with medications. It is wise to ask your physician or pharmacist before taking supplements.

DENTAL; Daily ;;;; <http://www.ada.org/public.aspx>

You are to be commended for flossing your teeth daily. Daily flossing is recommended

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

to remove plaque and food particles from between the teeth and under the gum line, which prevents gum disease, tooth loss, decay, and bad breath. In addition to flossing, the American Dental Association recommends brushing your teeth twice a day with fluoride toothpaste to achieve good dental health.

NUTRITION; *Two* ;;;; <http://www.cdc.gov/nutrition/everyone/fruitsvegetables/index.html>

The national goal for Americans is three servings of vegetables per day, with at least one being a dark green or orange vegetable. Fruits and vegetables contain essential vitamins, minerals, and fiber that may help you from chronic diseases and can make make weight control easier. The actual number of cups of fruits and vegetables needed daily also depends on an individuals age, gender, and level of physical activity.

SLEEP; *Most of the time* ;;;; <http://www.med.navy.mil/sites/nmcphc/health-promotion/psychological-emotional-wellbeing/Pages/sleep.aspx>

People who get enough restful sleep are able to concentrate on their activities, have more energy, and generally feel better.

PREGNANCY; *My partner or I are correctly and consistently using birth control ALL the time* ;;;; <http://www.med.navy.mil/sites/nmcphc/health-promotion/reproductive-sexual-health/Pages/contraception.aspx>

There is a wide range of new, safe and effective contraception options available, some that work for years after you have started them. Some are permanent and others are easily and quickly reversible when you are ready to have a baby. But not all forms of contraception are equally effective. It makes sense to carefully consider your parenting plans and get informed about contraception so you and your partner can select the option that works best for you. Be well informed about contraception, and talk with your partner and doctor.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Supervised By Date: 15-Apr-2016 08:18:00

Amended Report Text:

Brain MRI without and with gadolinium: 04/15/16 04:48:00.

History: 31 y/o M with acute onset distortion taste, Please evaluate olfactory nerves for pathology, and brain for possible pathology, please use gad.

Technique: Sagittal T1, axial and coronal T2, axial T2 FLAIR, axial DWI, axial GRE, axial T1, axial post T1 FS, coronal post 3D SPGR of the brain. A total of 16 mL of ProHance was given intravenously as part of the study.

FINDINGS: No focal mass lesion or abnormal enhancement along the expected course of either olfactory bulb or groove is seen. There is normal appearance of both olfactory bulb and nerves.

Acute: No hemorrhage, herniation, or hydrocephalus. No evidence of acute ischemia.

Brain: Brain parenchyma is within normal limits in signal and volume for age.

Vessels: No abnormal intravascular signal to suggest thrombosis. There is note of a tubular enhancing structure posteriorly in the left cerebellar hemisphere compatible with an incidental developmental venous anomaly

Bones: No suspicious lesion in the calvarium or skull base.

Other: Extracranial soft tissues are unremarkable.

IMPRESSION:

1. No enhancing mass lesions along the expected course of either olfactory bulb or groove is seen. Both olfactory bulbs and nerves appear to be normally developed.

2. No intracranial pathology. No abnormal enhancement.

S/O Note Written by BAHR, ROBERT J. @ 05 Apr 2016 0858 EDT**History of present illness**

The Patient is a 31 year old male.

He reported: Encounter Background Information: SUBJECTIVE: Pt is a 31 yo WM who injured his left ankle 1.5 years ago while sprinting. The MRI showed a thickening of his ligament. He was treated in PT here. His pain has been off and on until two months ago when his foot was plantarflexed. He has had no recent injury. He reports that his pain is 2-3/10 at rest, 4-5/10 with activity. Mild swelling noted laterally. Pain increases with walking and the pushing off of his foot and going up and down stairs.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Pain decreases with foot into the neutral position. He states he uses no meds--see AHLTA for medication reconciliation. He works with computers, exercises moderately running/walking 3-11 miles. He had new xrays three days ago which appear WNL. He learns without preference. His goal is to have a pain free ankle. No BTL. ~OBJECTIVE: FROM ankle left, strength in ankle dorsiflexors, plantarflexors, everters, inverters 5/5. negative drawer. Mild tenderness along lateral malleolus on left. Mild swelling noted. No heat or warmth or discoloration noted. Gait WNL, heel and toe walk within normal limits. ~ASSESSMENT: Pt has chronic left ankle pain which will benefit from skilled physical therapy program. ~PLAN: Home program of eccentric heel lowering and calf stretches for three weeks and then followup. ~GOAL: Decrease pain 75% in three weeks STG. Increase running without pain to four miles in 2 months. Pt educated on exercises and given handouts. ~PROGNOSIS: good. TODAY'S INTERVENTION: Pt reports that his pain is now gone. He is training for a marathon and is up to running 25 miles per week. Pt does not want his foot examined today. Plan: discharge PT. F/U pm.

Supervised By:

92925 ZACHARY E FISHER, MAJ, MC, Dept of Radiology

Supervised By Date: 16-Feb-2016 14:54:00

Amended Report Text:

Comparison: MRI October 5, 2014 and prior radiographs May 6, 2014

Findings: Routine radiographs of the ankle were obtained. Normal alignment is present without evidence for acute fracture or dislocation. There is mild lateral soft tissue swelling present. The ankle mortise and talar dome are intact. The joint spaces are preserved without significant degenerative changes.

Medical Record

Pain (10-pt scale): 0

Tobacco Use: Y ☐ N ☐Alcohol Use: Y ☐ N ☐**OBJECTIVE:**Fitzpatrick Type: I ☐ II ☒ III ☐ IV ☐ V ☐ VI ☐

Standby: N/A

A focused skin exam was notable for the following:

1. Scattered (~10) skin-colored, verrucous papules on the dorsal penis.

A/P Last Updated by LAM, THOMAS KIN @ 24 Feb 2016 1330 EST**1. Anogenital (venereal) warts:** Lesions on exam c/w warts. Treated today with LN2. Will give Condylox for continued Tx at home. Also counseled Pt on wart clinic on Thursday mornings. Pt voiced understanding and agreement.

Procedure(s): -Destruction Of Benign Lesion By Cryosurgery x 1 - After discussion of risks, benefits, and alternatives, verbal consent was received and cryo applied to lesions in standard fashion. Tx was applied in a pulsed fashion to minimize collateral tissue injury. Pt was instructed to use Vaseline ointment to the area(s) until healed. Pt tolerated the procedure well and left in stable condition.

Medication(s): Locations: DORSAL PENIS x8
-PODOFILOX-TOP 0.5% SOLN - APPLY TWICE A DAY FOR 3 DAYS THEN STOP FOR 4 DAYS, REPEAT WEEKLY AS NEEDED #1 RF2

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

months ago when his foot was plantarflexed. He has had no recent injury. He reports that his pain is 2-3/10 at rest, 4-5/10 with activity. Mild swelling noted laterally. Pain increases with walking and the pushing off of his foot and going up and down stairs. Pain decreases with foot into the neutral position. He states he uses no meds—see AHLTA for medication reconciliation. He works with computers, exercises moderately running/walking 3-11 miles. He had new xrays three days ago which appear WNL. He learns without preference. His goal is to have a pain free ankle. No BTL. ~OBJECTIVE: FROM ankle left, strength in ankle dorsiflexors, plantarflexors, everters, inverters 5/5. negative drawer. Mild tenderness along lateral malleolus on left. Mild swelling noted. No heat or warmth or discoloration noted. Gait WNL, heel and toe walk within normal limits. ~ASSESSMENT: Pt has chronic left ankle pain which will benefit from skilled physical therapy program. ~PLAN: Home program of eccentric heel lowering and calf stretches for three weeks and then followup. ~GOAL: Decrease pain 75% in three weeks STG. Increase running without pain to four miles in 2 months. Pt educated on exercises and given handouts. ~PROGNOSIS: good.

The Chief Complaint is: Ankle pain.

History of present illness

The Patient is a 31 year old male.

<<Note accomplished in TSWF-CORE>>

31M PMH s/f L ankle sprain and GAD in clinic for multiple c/o. 1.) Last 1 mo developed L ankle pain same distribution as ankle sprain 2 yr ago. Initially tripped in hole when playing softball, extensive swelling, bleeding into foot. Underwent physical therapy, fitted for brace. Plain films X2 negative for fx. MRI demonstrates thickening at anterior talofibular joint. Pt subsequently passed multiple PRTs. Now, getting back into shape for upcoming PRT, has developed pain at same site, mild swelling, crepitus. No known reinjury. Currently 2/10 pain, max 4/10. Exacerbated by rolling the ankle and walking. Has not taken any medications for it. 2.) C/o genital warts. Last seen by Marie Austin 9/2015. Was prescribed Imiquimod then 2nd course but no resolution of skin changes. Pt states he has had at least 150 lifetime sexual partners, decreased number of partners recently but using condoms only about 90% of the time. No other lesions. Did not have the Gardasil vaccine. 3.) Saw Marie Austin for dysgeusia 10/2015. At this time he had come off his Zoloft rapidly, did not taper, and his sx were attributed to w/d. He was sent to psychiatry, and restarted on low-dose 25 then tapered to 12.5 and off. The medication changes have not affected his taste, sx persist. In general what used to taste sweet now tastes bitter. Some savory foods also taste bitter. Of note: has low-normal B12. No nasal congestion. Has intact olfaction. No GERD. No change to urine output/appearance. No abdominal pain.

Current medication

Including OTC meds, vitamins, herbals, etc.

Sertraline 25mg daily followed by weaning to 12.5mg daily then off

Melatonin qhs prn

ALL

NKDA.

Past medical/surgical history**Reported:**

Released w/o Limitations

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: CC GROUP
Daniel arrived on time for group. Daniel is at session #26 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. No one in group admitted to drinking or abusing drugs since we last saw them. The facility was closed down last week due to weather so it was 2 weeks since we had seen any of them. The group shared the stress and struggles they have had over the past 2 weeks focusing on if there was a trigger to drink or if they would have in the past. Group closed with a group member sharing one constructive thing the person can do for a better sober lifestyle. Daniel stated that his snow days were on the mountain snowboarding. He stated that he is working to be more social. He shared that he really did not have triggers to drink. He shared with an angry that he was given the tool to see he also makes mistakes. He does not get as angry or for as long if he just can bring to mind the times he has done the thing he is getting mad at. He closed with the group hearing he appears to have made positive changes in his life and his behavior reflects it. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and active throughout the session. Daniel has completed his ITP. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is not scheduled to return and this record is CLOSED.

No evidence of SI/HI during this encounter
Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

INDIVIDUAL SESSION CC

Daniel arrived Daniel is at session 26 of the 26 scheduled sessions of the Continuing Care treatment program attending from 1400 to 1500, total of 1 hour. Daniel reported the Continuing Care group was helpful in keeping him from drinking. He did state that his has learned the CBT to be the best therapy for him. He shared how he dealing with life better now that he has stopped drinking. He stated that he continues to use his CBT on situations that baffle him. He stated that he will be getting a new roommate. He does see that drinking will be an issue with either of them because they have both been through this program. We reviewed his treatment plan. He cancelled Problem #1 Objectives#7 and 8 because he knows what to do and has heard enough that he could have a sponsor if he wanted one, but he does not. He stated an understanding that he would not be allowed to abuse alcohol again while on active duty and the Navy would like for him to have an alcohol abstinent lifestyle. He does not see where that is a problem for him. Daniel closed his entire open treatment plan Objectives in preparation of closing with this program. Daniel is staying for group today.

Note Written by BROWN,CYNTHIA E @ 28 Jan 2016 1325 EST**INDIVIDUAL SESSION CC Urine test**

Daniel arrived on time to his individual session. He is at session 25 of the 26 scheduled sessions of the Continuing Care treatment program attending from 1100 to 1210, total of 1 hour. He shared how stressful it has been having 4 people in his apartment. He described needing his down time and would go into his walk-in closet to be by himself. He began to describe at length how he was delegating these duties as all 4 of them are partners in his business. When asked if this made him want to drink he responded that the thoughts were there but he would not call them cravings. He shared that drinking would not be the answer for him. He did state that he met a woman not on line. She is a professor and he believes she is interested in having sex with him. He stated that they have not had sex yet. He believes this is a huge step in the right direction for him but he does not see them having a long term relationship. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and active throughout the day. Daniel extended Problem #1, Objectives #1-4, 6, 7, and 9 to 26 January 2016 and he cancelled Objective #8 as he knows how to get a sponsor already

Daniel will continue with Continuing Care treatment and has Problem #1, Objectives #1-4, 6, 7, and 9 due 26 January 2016. Daniel is schedule to stay for group today.

No evidence of SI/HI during this encounter

Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

CC GROUP

Daniel stayed for group after his individual session. Daniel is at session # 25 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. Foul weather and base closure guidelines were discussed. The infections illness of this season was also discussed. Each member was encouraged that if they were contagious they should call their sponsors and let them know why they will not be in group. They were instructed to not come to group is contagious. The group conducted check in process describing if they any thoughts to drink or triggers for

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

relapse. Three members of the group admitted to having fleeting thoughts of drinking during their time from the last group they attended. All group members denied drinking or abusing drugs. Daniel shared that he went snowboarding with some men from work. He met them on the mountain and did the slopes for about half of the day. He shared that it was different because he was not in his own zone with just music in his ears. He shared with the group that he has 4 people in his 1 bedroom apartment right now and they have been for the past 2 weeks. He stated that they are connected to his business. He has found that it was over stimulation for him and he would retreat to closet. He shared they are dirty people but admitted that he was a clean person and will take 2 showers a day. He said that they were flying back to their own homes tomorrow and he just couldn't wait. He stated to the group that he bought a house because he has orders to the same duty station. Daniel did appear to stay on point for most of group today which shows respect for group members and progress for him. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and active throughout the session. Daniel updated his treatment plan before group. See ADD NOTE section of this encounter for that information. Daniel will continue with Continuing Care treatment and has Problem #1, Objectives #1, 2, 3, 4, 6, 7, and 9 due 26 January 2016. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 26 January 2016 at 1230 for group.

Daniel arrived 45 minutes early to group. Daniel is at session # 24 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. Group discussed one member's unwillingness to follow through with what he promised to group. The point of trust and making changes is what treatment is about was made. Group debriefed their activities during Christmas and New Year's. No group member admitted to drinking or using drugs. A discussion of euphoria and how childhood experiences with video games was like drinking in losing track of time, food, and human interaction.

Daniel shared that he kept one of his dating sites open for 2 extra days because he had already started a conversation with someone and wanted to complete it. He shared this woman he was having the "conversation" with became his date for New Year's. He stated that it was "lack luster". This was the reason he was taking himself off the dating sites in the first place. He was confronted with lying to the group. He stated that he sees as changing his mind. He failed to see the promise as binding or a commitment. He stated that doing he wanted and necessarily the next right thing gets him trouble. He was able to relate to his production at work being discussed as poor. He stated that he just does not work as hard as he could and senior paygrades are starting to notice. He stated that he wants to do better and will his CBT to make better decisions. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and active throughout the session. Daniel has several treatment plan problem objectives out of date on his treatment plan. He will not be in group next week due to a class he is taking but agreed to an individual session when he returns. Daniel will continue with Continuing Care treatment and has an outdated treatment plan. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 19 January 2016 at 1230 for group.

Note Written by GONZALEZZARAZUA,JORGE A @ 30 Dec 2015 1356 EST

Daniel arrived on time and is at session #20 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 ½ hours. Group went over their recent holiday weekend and how they were able to handle any urges or cravings to drink. Members also shared their plans for the upcoming New Year's weekend and how they plan to deal with possible triggers or urges to drink. All members denied consuming alcohol or abusing illegal drugs since their last visit.

Daniel shared that he spent his Christmas holiday working on his computer based game, but at times throughout the night he would check his social media and notice that plenty of his online friends would post pictures of themselves out with family and friends, opening presents or just hanging out celebrating the holiday. He states that he felt envious and lonely and had a craving to want to drink, but instead continued to work on his game and the feeling would pass. He also reports that later in the weekend he became upset because a female friend who he states he was interested in canceled on their date. He states that he was mad about it because he thought they had a good time during their previous date. Daniel states that online dating is taking a lot of his time as he does it often and after receiving feedback from the group states that he will likely delete his online dating profiles and would share with the group during the next session.

Daniel appeared engaged and interested in the treatment process. He appeared engaged and was appropriate and active throughout the session. Daniel has Problem #5, Objective # 3 overdue 18 December 2015. He will schedule his individual appointment after the New Year's holiday to update his treatment plan with this counselor. He will continue with Continuing Care treatment and has Problem #5, Objective # 3 due 18 December 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel will continue with Continuing Care treatment and is scheduled to return 05 January 2016 for his next group session.

No evidence of SI/HI during this encounter.

Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

Released w/o Limitations**Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: See ADD/NOTE section for more information on this encounter.**The following Disposition Note Was Overwritten by GONZALEZZARAZUA, JORGE A @ 30 Dec 2015 1356 EST:**

The Disposition section was last updated by GONZALEZZARAZUA, JORGE A @ 30 Dec 2015 1356 EST - see above. Previous Version of Disposition section was entered/updated by GONZALEZZARAZUA, JORGE A @ 30 Dec 2015 1332 EST.

Released w/o Limitations**Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session #20 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. Group went over their recent holiday weekend and how they were able to handle any urges or cravings to drink. Members also shared their plans for the upcoming New Year's weekend and how they plan to deal with possible triggers or urges to drink. All members denied consuming alcohol or abusing illegal drugs since their last visit.

Daniel shared that he spent his Christmas holiday working on his computer based game, but at times throughout the night he would check his social media and notice that plenty of his online friends would post pictures of themselves out with family and friends, opening presents or just hanging out celebrating the holiday. He states that he felt envious and lonely and had a craving to want to drink, but instead continued to work on his game and the feeling would pass. He also reports that later in the weekend he became upset because a female friend who he states he was interested in canceled on their date. He states that he was mad about it because he thought they had a good time during their previous date. Daniel states that online dating is taking a lot of his time as he does it often and after receiving feedback from the group states that he will likely delete his online dating profiles and would share with the group during the next session.

Daniel appeared engaged and interested in the treatment process. He appeared engaged and was appropriate and active throughout the session. Daniel has Problem #5, Objective # 3 overdue 18 December 2015. He will schedule his individual appointment after the New Year's holiday to update his treatment plan with this counselor. He will continue with Continuing Care treatment and has Problem #5, Objective # 3 due 18 December 2015. See Da

CONTACT NUMBER: [REDACTED]
NO VITALS TAKEN AT SARP TREATMENTS/O Note Written by HILL, LARRY D @ 23 Dec 2015 1213 ESTHistory of present illness

The Patient is a 30 year old male.

The patient was in attendance for the Continuing Care Support Group.

A/P Last Updated by MAPLES, MICHAEL J @ 22 Dec 2015 1320 EST1. Alcohol dependence, uncomplicated

Procedure(s): -ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 1 - The patient attended group session from 1230 - 1400.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by HILL, LARRY D @ 23 Dec 2015 1211 ESTReleased w/o Limitations

Discussed: Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session 22 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group shared their holiday plans and how Christmas will look through sober eyes, for some the first time in years. No group member admitted to drinking alcohol or abusing drugs since last seen at SARP.

Daniel sat relaxed for the majority of the group, but did provide minimal feedback to others and was observed probing as usual. Daniel was eventually drawn into the group and shared his holiday plans saying "I plan on spending Christmas alone this year and catch up on a lot of work I have to get done in my business. I have to step back and look at myself and identify that I'm choosing to be alone during the holidays due to my business and not because I have nowhere to go. I find myself drinking more when I'm around others for example, last year I was at my mom's house and I drank a lot there more than usual." Daniel wrote that he has not attended any required AA meetings, has no sponsor and is working steps 3&4. Daniels progress reports are contradictory as to his sponsor status and meeting attendance, where some he has a sponsor and others he does not.

Daniel appeared engaged and interested in the treatment process and was appropriate and less active throughout the session. Daniel has several objectives that are overdue and his ITP is out dated. Daniels ITP will be updated during his next individual session 28 December 2015. Daniel will continue with Continuing Care treatment and his record will be updated his next individual session as stated above. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is scheduled to return at 1230 28 December 2015. No evidence of SI/RI during this encounter. Secondary Record maintained at SARP Washington Navy Yard.

Disposition Last Updated by GONZALEZZARAZUA, JORGE A @ 18 Dec 2015 1245 EST**Released w/o Limitations**

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session #19 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 ? hours. Group opened today by doing their weekly check-in, recapping their week and identifying any possible triggers or cravings. Group also said good bye to a group member by doing a group closing exercise.

Daniel shared that over the past 2 weeks he rekindled an old relationship with one of his ex-girlfriends. He states that she contacted him and invited him to a game and he accepted. While at the game, Daniel reports to have experienced a craving for beer as a lot of people around him were drinking while everyone seemed to be having fun. Daniel states that he was able to control his craving and the rest of the day went on just fine without him drinking. He also states to having had a serious talk with his friend and they were able to shared feelings that they had kept bottled up for over a year since they stopped talking. Daniel states that although nothing serious seems to be coming out from meeting up with her, he liked the fact that they were able to shared insight about each other.

Daniel appeared engaged and interested in the treatment process. He appeared engaged and was appropriate and active throughout the session. Daniel completed Problem #5, Objectives #1 and 2 of his ITP. He will continue with Continuing Care treatment and has Problem #5, Objective # 3 due 18 December 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 22 December 2015 for his next group session.

No evidence of SI/HI during this encounter.

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session #20 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group performed their check-in reporting changes since last group and thoughts, cravings or triggers; no group member admitted to drinking alcohol or abusing drugs since last seen at SARP. The group shared about challenging family relationship and the newness of holidays without alcohol.

Daniel shared that he believes he is making progress as he is slowly being able to communicate with others and is actually enjoying having others company. He states he continues to work on his personal projects developing software and at this point that continues to be his main priority. Daniel provided feedback to another member, stating he could relate to some of the issues he is confronting as he also faces similar circumstances when he thinks about his past with his father and how hard it is to let go and move forward. Daniel appeared engaged and interested in the treatment process. He appeared engaged and was appropriate and active throughout the session. Daniel appeared quite for most of the group, but seemed to relate to another group member when talking about things that have happened in the past and how hard it is to let go at times. Daniel has no objective due from his ITP. He will continue with Continuing Care treatment and has Problem #5, Objective # 1 and 2 due 11 December 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 15 December 2015 at 1230 for group. No evidence of SI/HI during this encounter.

Note Written by REGIS, JAMES @ 04 Dec 2015 0647 ESTContinuing Care Group - Tuesday, 01 December 2015

Daniel arrived on time to his Continuing Care Group which was held on Tuesday the 1st of December 2015, from 1230-1400. This is Daniel's 19th of 26 scheduled sessions. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Daniel performed his check-in with the group members going over any triggers or cravings he may have had during the past week and holiday. Afterwards, Daniel said goodbye to a group member who was closing out of group today.

During Daniel's check-in, Daniel shared that he didn't do anything for Thanksgiving. Daniel said that he relaxed all weekend and was able to do a lot of programing on his new computer game. He stated that he was able to go out on a date with one of his female friends but that it was strictly platonic and amicable. He wrote that he was able to become "independent from romantic relationships" a something that he did this week as a positive step towards his recovery. He also wrote how he was able to relate in todays group with the act "revenge seeking" and it's importance at times.

Daniel seemed thoughtful and indifferent about his holiday weekend and up and coming week and events. He wrote that he attended only 1 AA meeting and that he still doesn't have an AA sponsor but that he is working on steps #3 & #4 of the AA 12 Step program while abstaining from alcohol. See "CCG PATIENT ATTENDANCE NOTE" in SARP Patient file for complete information. Daniel has Problem #5 Objectives #1 and #2 of his ITP due next week on the 11th of December 2015. Daniel will return for his next CC treatment group on the 8th of December 2015.

Daniel had no evidence of SI/HI/ATV during this encounter.

Secondary record maintained at SARP Washington Navy Yard 202-433-7577.

Procedure(s):

-ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 6 - THE PATIENT ATTENDED GROUP SESSION FROM 1230-1400

-ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - CONDUCTED CASE MANAGEMENT TO REVIEW AND UPDATE THE OVERALL SARP CLINICAL RECORD. IN ADDITION SERVICES TO HELP ASSIST THE PT AND TO MONITOR TREATMENT PRGRESS AND OVERALL SERVICE DELIVERED.

Disposition Last Updated by GONZALEZZARAZUA, JORGE A @ 25 Nov 2015 1049 EST**Released w/o Limitations****Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for his group session. He is at session #16 of the scheduled 26 sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 ? hours. All group members denied drinking or abusing drugs. Group members performed their check-in exercise and identified possible triggers or cravings for the upcoming long holiday weekend. Group also filled out "Types of Relapses Before Chemical Relapse" worksheet and shared their individual answers with the rest of the group.

Daniel shared that he had a trigger yesterday because his friend who he had planned on visiting over the Thanksgiving weekend cancelled on him at the last minute. He states that normally he would just get mad and start drinking, but instead used what he has learned in CBT and was able to fight off the urge to want to drink on impulse. He states that instead he went on a local date and pretty much forgot about the craving and focused on his game developing; reminding himself that staying local is a better option for him because he can get so much more done then going out of town.

Daniel appeared comfortable throughout today's session. He seemed active and willing to engage in discussion with group, sharing and providing feedback. Daniel has no objective due today. He will continue with Continuing Care treatment and has Problem #5, Objectives #1 and 2 from ITP due 11 December 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is scheduled to return 01 December 2015 for her next group session.

No evidence of SI/HI during this encounter.

Disposition Last Updated by GONZALEZZARAZUA, JORGE A @ 20 Nov 2015 1252 EST**Released w/o Limitations****Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for his group session. He is at session #15 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group shared updates since last group regarding triggers and cravings during their check-in exercise. Group completed "Positive Influence List" and "Negative Influence List" worksheets and shared their answers with the group. No group member admitted to drinking alcohol or abusing drugs since last seen at SARP. Each group member submitted a sample for testing.

Daniel shared that he has had a good week since his last visit to SARP. He states that he spent some time with friends from work and is looking forward to continue that trend. He also shared that this upcoming weekend he plans to visit a female friend that lives a couple hours from here and might spend the weekend with her. He states that she is also in recovery so drinking while out with her will not be an issue. Daniel identified both his mother and step dad as positive influences toward his recovery. He listed his dad as a positive influence and also had his step mom listed being both, positive and negative depending on what they talk about or her mood.

Daniel appeared appropriate and interested in the treatment process. He seemed active and appropriate throughout today's session. Daniel has no objective due today. Daniel will continue with Continuing Care treatment and has Problem #5, Objective #1 and 2 due 11 December 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is scheduled to return 24 November 2015 at 1230 for group.

No evidence of SI/II during this encounter

-ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - CONDUCTED CASE MANAGEMENT TO REVIEW AND UPDATE THE OVERALL SARP CLINICAL RECORD. IN ADDITION SERVICES TO HELP ASSIST THE PT AND TO MONITOR TREATMENT PRGRESS AND OVERALL SERVICE DELIVERED

Disposition Last Updated by GONZALEZZARAZUA, JORGE A @ 13 Nov 2015 1411 EST**Released w/o Limitations****Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for his monthly individual appointment with this counselor, dressed appropriately in casual civilian attire. Daniel opened by stating that he is doing well and feeling more comfortable in the group setting than he did a few months ago prior to him having to go TAD for school. He also reports that he is seeing his therapist is putting an honest effort on working on his issues, rather than overlooking them.

Daniel shared that he is feeling good and accomplished after having accepted an invite from a male co-worker to attend a BBQ gathering this week. He states that he actually had a good time at the gathering and even met new people who he had conversations with. Daniel admits that it was not easy and at certain points he would wonder if he was being appropriate or too weird, but would then forget about it and just enjoyed most of the evening.

Daniel update his treatment plan by adding 4 more problems to his Master Problems List. He also states that at this time he is unable to complete Problem 1, Objective 7 as he is not comfortable approaching men and being open with them, something he states he is currently working on with his therapist. Daniel and this counselor have agreed to delay Problem 1, Objective 7 until 04 January 2016 and will revisit at that time. Daniel is scheduled to return for his next group session on 17 November 2015 @ 1230Hrs. He has Problem 5, Objectives 1 and 2 due 11 December 2015.

No evidence of SI/HI during this encounter.

Disposition Last Updated by GONZALEZZARAZUA, JORGE A @ 13 Nov 2015 1400 EST**Released w/o Limitations****Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session #14 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230-1400, total of 1 ? hours. The group opened today by welcoming one new member to the group, performing individual introductions and going over group rules. Group also performed their weekly check-in exercise, reporting any current struggles, cravings or triggers that they might have suffered since their last visit.

Daniel shared that he is attending AA again and is currently working on steps 3 and 4 with his home group. He states that he is also trying to overcome his inability to hang-out with other males and will try to attend a BBQ gathering with guys from work. He states that he is often invited to gatherings by his male peers, but normally does not attend as he has always preferred to spend time with women, rather than with men.

Daniel appeared active and comfortable throughout today's group session. He seemed at ease sharing what his goals are and what he is trying to do, without hesitating if anyone was judging him or bothering himself about what anyone else was thinking of him.

Daniel has Problem #1, Objective #7 of his ITP overdue 20 Oct 2015 and has scheduled an individual appointment on 12 November 2015 with this counselor to update his treatment plan. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel will continue with Continuing Care treatment and is scheduled to return on 17 November 2015 for his next scheduled group session.

No evidence of SI/HI during this encounter.

Released w/o Limitations**Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Tiffany arrived on time and is at session #13 of the 40 scheduled sessions for the Continuing Care treatment program attending from 1230-1400, total of 1 ? hours. The group opened today by welcoming one new member to the group, performing individual introductions and going over group rules. Group also performed their weekly check-in exercise, reporting any current struggles, cravings or triggers that they might have suffered since their last visit.

Tiffany shared that she continues to battle her struggles and is doing all the things that are asked of her by her sponsor and other AA members to help her stay sober each day. She reports that this coming weekend she has signed up along with a few of her acquaintances to attend a "Gratitude breakfast" and also a "Step study" group. She also engaged with another member who is having family issues and offered her support, stating she was proud of him for handling his current situation without resorting to drinking. Tiffany report she is feeling better overall and although still feeling lonely at times, it is not as intense as it has been in the past.

Tiffany appeared comfortable and active throughout today's group session. She seemed to care about another group member's current struggles with family issues and offered

3. Over the last 2 weeks, how often have you been bothered by feeling down, depressed or hopeless?: Not at all
4. Over the last 2 weeks, how often have you been bothered by having little interest or pleasure in doing things?: Not at all
5. Over the last 2 weeks, how often have you been bothered by the thoughts that you would be better off dead or hurting yourself in some way?: Not at all

S/O Note Written by AUSTIN,MARIE @ 09 Nov 2015 1155 EST**Chief complaint**

The Chief Complaint is: Evaluating for ageusia.

History of present illness

The Patient is a 30 year old male.
 Autocited allergies verified.

PO1 is 30 y/o male - pt has weaned himself off the zoloft . Saw the psychiatrist and she is weaning him off more slowly . He had been c/o of insomnia - now no insomnia , and lost weight. He was at 125 of zoloft will on a slower taper .

Pt c/o loss of taste x1 month, particularly in detecting sweetness than any others senses. Pt claims the only current med taking is Zoloft. Since he had so many side effects will wait until he is off the zoloft and re- evaluate the taste issue .

General overall feeling /health - Very Good.

The Patient is a 30 year old male.

THE PT ATTENDED THE OUTPATIENT CONTINUING CARE TREATMENT PROGRAM (CC).

A/P Last Updated by MAPLES, MICHAEL J @ 03 Nov 2015 1246 EST**1. Alcohol dependence, uncomplicated**

Procedure(s):

-ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 6 - THE PATIENT ATTENDED GROUP SESSION FROM 1230-1400

-ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - CONDUCTED CASE MANAGEMENT TO REVIEW AND UPDATE THE OVERALL SARP CLINICAL RECORD. IN ADDITION SERVICES TO HELP ASSIST THE PT AND TO MONITOR TREATMENT PRGRESS AND OVERALL SERVICE DELIVERED.

Disposition Last Updated by GONZALEZZARAZUA, JORGE A @ 06 Nov 2015 1419 EST**Released w/o Limitations****Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments:

Daniel arrived on time and is at session #13 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230-1400, total of 1 ? hours. The group performed their weekly check-in, reporting their struggles, triggers and cravings. The group was challenged with a scaling question; on a scale from 1-10, 1 being the lowest, 10 being the highest, how dedicated are you to your recovery? The group shared post group feelings from last group after two members shared they suffered a relapse.

Daniel shared that he has taken positive steps since sharing about his relapse during the previous group. He states he attended AA this past week is trying to be more active in managing his anxiety and working with his psychologist. He admitted that at times he does not do or use all the tools he has learned since starting treatment to help him in his sobriety, but last week was a reminder for him and is looking forward to continue in a positive light.

Daniel appeared relaxed and attentive during today's group session. He seemed to connect with the group and provided feedback. He also seemed receptive to what others shared and feedback that was provided. Daniel has Problem #1, Objective #7 of his ITP overdue 20 Oct 2015. Daniel will be asked to setup an individual appointment with his counselor to address treatment planning and updating. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel will continue with Continuing Care treatment and is scheduled to return on 09 November 2015 for his next scheduled group session.

No evidence of SI/HI during this encounter.

S/O Note Written by ZEMBRZUSKA, HANNA DOMINIKA @ 06 Nov 2015 1312 EST**History of present illness**

The Patient is a 30 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

30 y/o single Caucasian man E-6/AD/USN, with approximately 9 ? years continuous active duty service, currently assigned to Fort Meade, Maryland with a past psychiatric history of GAD and Alcohol Use Disorder presents for f/u appt. Pt ran out of Zoloft and so for the past 2 weeks he has been off of it. Since Zoloft was discontinued pt has been struggling with some mild withdrawal symptoms, but hypersomnia has resolved. He no longer needs to naps for 30-45 min about three times per day. He is sleeping 6-7 hours per night with Melatonin. He feels much more productive and has lost weight. He is running 25-30 miles per week and is using CBT skills to combat anxiety. He has re-enlisted for 6 more years with a nice financial bonus that he will use to pay off his debts. Re-enlistment ceremony was on 16OCT and his family came.

Medication list reviewed with patient, reconciliation completed, and list given to patient.

Visit is not deployment-related.

Pain Severity 0 / 10.

Allergies

Current Allergies Reviewed. NKDA.

Current medication

Melatonin for insomnia.

Past medical/surgical history**Reported:**

Recent Events: Medication compliance.

Medical: Reported medical history Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

and psychiatric history

* THERAPY: multiple visits with clinical social worker, Linda Nilsen, at WRNMMC, between August 2014 and October 2014.

She documented Anxiety Disorder, NOS. The SM indicated that he discontinued his participation in treatment due to the

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

- limited impact of these visits.
- * MEDS: Denies other medication trials
- * INPATIENT/RESIDENTIAL CARE: Denies psychiatric hospitalizations. Completed 28 day inpatient alcohol rehab at Ft. Belvoir.
- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior.

Family history:

F: Alcohol use disorder

M: depression

Sister#1: depression, hx of suicide attempts

Sister#2: bipolar disorder, hx of suicide attempts, unknown drug abuse which led to loss of custody of 2 children

Maternal grandmother: bipolar

Personal history

Social history Pt is the oldest of 3 children from a Sacramento, California home, broken by divorce when the SM was a toddler (3-6 y/o). He and his two sisters were raised by their father, whose employment challenges qualified them for welfare. There was also a tumultuous home environment. Father was not involved with his children and was emotionally/physically abusive. Pt felt that he was an inconvenience to his father. Growing up pt had few friends because he would isolate himself. He left his family abruptly, upon graduation from high school, in 2003. Moved out of state and enrolled in college.

Behavioral: Caffeine use 4 cups of coffee per day. Stops drinking caffeine after 2pm and never a smoker / Never Used Tobacco Products.

Alcohol: Alcohol use Drank one glass of wine recently.

Subjective

NO Learning Disability, Language or Learning Barriers.

Review of systems

No current substance use symptoms

No current cognitive symptoms

No current psychotic symptoms

Physical findings**General Appearance:**

* Alert. * Well developed. * Well nourished. * In no acute distress.

Neurological:

* No disorientation was observed, oriented x3. * No hallucinations. * Memory was unimpaired. * Remote memory was not impaired. * Recent memory was not impaired. * Judgement was not impaired.

Speech: * Normal, regular rate, non-pressured. * Rate was not slowed. * Not pressured. * Tone was not a monotone.

Psychiatric:

Demonstrated Behavior: * Behavior demonstrated no abnormalities - appropriate and cooperative. * No psychomotor retardation. * Behavior demonstrated no psychomotor agitation. * No decreased eye-to-eye contact was observed.

Mood: * Euthymic Able to smile appropriately. * Not depressed. * Not anxious.

Affect: * Normal anxious. * Not labile. * Not flat. * Not constricted. * Showed no irritability.
